Brill, 2008-12-03 From 1972 to 1974 I was

working on a PhD thesis entitled Multiple Server Queues with Service Time Depending on Waiting Time The method of analysis was the embedded Markov chain technique described in the papers 82 and 77 My analysis involved lengthy tedious derivations of systems of integral equations for the probability density function pdf of the waiting time After pondering for many months whether there might be a faster easier way to derive the integral equations I finally discovered the basic

theorems for such a method in August 1974 The theorems establish a connection between sample path level crossing rates of the virtual wait process and the pdf of the waiting time This connection was not found anywhere else in the literature at the time I immediately developed a comprehensive new methodology for deriving the integral equations based on these theorems and called it system point theory Subsequently it was called system point method or system point level crossing method SPLC or simply LC I rewrote the entire PhD thesis from November 1974 to March 1975 using LC to reach solutions The new thesis was called System Point Theory in Exponential Queues On June 12 1975 I presented an invited talk on the new methodology at the Fifth Conference on Stochastic Processes and their Applications at the University of Maryland Many queueing theorists were present

Tutorials on Emerging Methodologies and Applications in Operations Research Harvey J. Greenberg, 2006-06-16 This volume reflects the theme of the INFORMS 2004 Meeting in Denver Back to OR Roots Emerging as a quantitative approach to problem solving in World War II our founders were physicists mathematicians and engineers who quickly found peace time uses It is fair to say that Operations Research OR was born in the same incubator as computer science and it has spawned many new disciplines such as systems engineering health care management and transportation science Although people from many disciplines routinely use OR methods many scientific researchers engineers and others do not understand basic OR tools and how they can help them Disciplines ranging from finance to bioengineering are the beneficiaries of what we do we take an interdisciplinary approach to problem solving Our strengths are modeling analysis and algorithm design We provide a quantitative foundation for a broad spectrum of problems from economics to medicine from environmental control to sports from e commerce to computational ometry We are both producers and consumers because the mainstream of OR is in the interfaces As part of this effort to recognize and extend OR roots in future problem solving we organized a set of tutorials designed for people who heard of the topic and want to decide whether to learn it The 90 minutes was spent addressing the questions What is this about in a nutshell Why is it important Where can I learn more In total we had 14 tutorials and eight of them are published here
