**The Mathematical Tourist** Ivars Peterson, 2025-05-21 In the first edition of *The Mathematical Tourist* renowned science journalist Ivars Peterson took readers on an unforgettable tour through the sometimes bizarre but always fascinating landscape of modern mathematics. Now the journey continues in a new updated edition that includes all the latest information on mathematical proofs, fractals, prime numbers and chaos, as well as new material on the relationship between mathematical knots and DNA, how computers based on quantum logic can significantly speed up the factoring of large composite numbers, the relationship between four dimensional geometry and physical theories of the nature of matter, the application of cellular automata models to social questions and the peregrinations of virtual ants, a novel mathematical model of quasicrystals based on decagon shaped tiles. Blazing a trail through rows of austere symbols and dense lines of formulae, Peterson explores the central ideas behind the work of professional mathematicians, how and where their pieces of the mathematical puzzle fit in the sources of their ideas, their fountains of inspiration and the images that carry them from one discovery to another.

from Kuipers The present volume is devoted to Kuipers neo classical philosophy of science as laid down in his Structures in Science Kluwer 2001 Kuipers defends a dialectical interaction between science and philosophy in that he views philosophy of science as a meta science which formulates cognitive structures that provide heuristic patterns for actual scientific research including design research In addition Kuipers pays considerable attention to the computational approaches to philosophy of science as well as to the ethics of doing research Thomas Nickles David Atkinson Jean Paul van Bendegem Maarten Franssen Anne Ruth Mackor Arno Wouters Erik Weber Helena de Preester Eric Scerri Adam Grobler Andrzej Wisniewski Alexander van den Bosch Gerard Vreeswijk Jaap Kamps Paul Thagard Emma Ruttkamp Robert Causey Henk Zandvoort comment on these ideas of Kuipers and many present their own account The present book also contains a synopsis of Structures in Science It can be read independently of the first volume of Essays in Debate with Theo Kuipers which is devoted to Kuipers From Instrumentalism to Constructive Realism 2000      **Knowing** Michael Munowitz,2005-11 Publisher Description

**Mallarmé and Debussy** Elizabeth McCombie,2003 This book examines afresh the web of similarities and differences between music and poetry using works by Mallarmé and Debussy as case studies It challenges the easy metaphorical impressionism that has characterized much of the scholarly literature to date Analyzing Mallarmé's vision of a shared musico poetic aesthetic Elizabeth McCombie derives a set of performative structural motifs analytical tools that express our experience of the two arts and their middle ground      A Post-Modern Perspective on Curriculum William E. Doll Jr.,1993 Doll draws relationships among the ideas advanced in chaos theory Piagetian epistemology cognitive theory and the work of Dewey and Whitehead In this book on the post modern perspective on the curriculum the author asserts that the post modern model of organic change is not necessarily linear uniform measured and determined but is one of emergence and growth made possible by interaction transaction disequilibrium and consequent equilibrium Transformation not a set course the book argues should be the rule and open endedness is an essential feature of the post modern framework In the book the author envisages a curriculum in which the teacher's role is not causal but transformative The curriculum is not the race course but the journey itself metaphors can be more useful than logic in generating dialogue in the community and educative purpose planning and evaluation is flexible and focused on process not product Scholarly yet direct and to the point Doll's ideas make sense to front line educators in the real world of today's schools Kenneth Graham Seaford Union Free School District      **Mathematical Reasoning** Raymond Nickerson,2011-02-25 The development of mathematical competence both by humans as a species over millennia and by individuals over their lifetimes is a fascinating aspect of human cognition This book explores when and why the rudiments of mathematical capability first appeared among human beings what its fundamental concepts are and how and why it has grown into the richly branching complex of specialties that it is today It discusses whether the truths of mathematics are discoveries or inventions and what prompts the emergence of concepts that appear to be descriptive of nothing in human experience Also covered is the role of esthetics in mathematics What exactly

are mathematicians seeing when they describe a mathematical entity as beautiful There is discussion of whether mathematical disability is distinguishable from a general cognitive deficit and whether the potential for mathematical reasoning is best developed through instruction This volume is unique in the vast range of psychological questions it covers as revealed in the work habits and products of numerous mathematicians It provides fascinating reading for researchers and students with an interest in cognition in general and mathematical cognition in particular Instructors of mathematics will also find the book's insights illuminating
