The War of Guns and Mathematics David Aubin,Catherine Goldstein,2014-10-07 For a long time World War I has been shortchanged by the historiography of science Until recently World War II was usually considered as the defining event for the formation of the modern relationship between science and society In this context the effects of the First World War by contrast were often limited to the massive deaths of promising young scientists By focusing on a few key places Paris Cambridge Rome Chicago and others the present book gathers studies representing a broad spectrum of positions adopted by mathematicians about the conflict from militant pacifism to military scientific or ideological mobilization The use of mathematics for war is thoroughly examined This book suggests a new vision of the long term influence of World War I on mathematics and mathematicians Continuities and discontinuities in the structure and organization of the mathematical sciences are discussed as well as their images in various milieux Topics of research and the values with which they were defended are scrutinized This book in particular proposes a more in depth evaluation of the issue of modernity and modernization in mathematics The issue of scientific international relations after the war is revisited by a close look at the situation in a few Allied countries France Britain Italy and the USA The historiography has emphasized the place of Germany as the leading mathematical country before WWI and the absurdity of its postwar ostracism by the Allies The studies presented here help explain how dramatically different prewar situations prolonged interaction during the war and new international postwar organizations led to attempts at redrafting models for mathematical developments

Mathematicians as Enquirers Leone L. Burton,2004-05-26 It is amazing that the usual reply to being introduced to a mathematician is a stumbling apology about how bad someone is at mathematics no matter how good they may be in reality The problem is that we have come to view mathematics as an arcane branch of knowledge that only a few can aspire to understand or grasp The sense of separation between those who have the knowledge and those who do not is present even amongst academics where many of the same skills and research practices exist intuition the use of symbolic structures and the use of intuition and insight The more worrying aspect of this separation is the ever declining numbers of students choosing mathematics as part of their curriculum beyond the stage when it is mandatory Even worse it would seem that the

mathematics community has created a discriminatory environment that deters many students from continuing beyond secondary and tertiary education Exit interviews with graduates show a stark rejection of their previously chosen subject What about mathematicians themselves how do they see themselves Do male and female mathematicians come to know their mathematics in different ways do they tackle different problems with varying results for their status in the research community Does the pervasive labelling that mathematics is a male domain arise because of a lack of role models for women or through its highly competitive hierarchical nature Are the negative labels often associated with mathematics i e
