Mathematics Education And Language Interpreting Hermeneutics And Poststructuralism:

Mathematics Education and Language Tony Brown, 2012-12-06 Contemporary thinking on philosophy and the social sciences has primarily focused on the centrality of language in understanding societies and individuals important developments which have been under utilised by researchers in mathematics education In this revised and extended edition this book reaches out to contemporary work in these broader fields adding new material on how progression in mathematical learning might be variously understood A new concluding chapter considers how teachers experience the new demands they face

MasterClass in Mathematics Education Paul Andrews, Tim Rowland, 2013-11-21 MasterClass in Mathematics Education provides accessible links between theory and practice and encourages readers to reflect on their own understanding of their teaching context Each chapter written by an internationally respected authority explores the key concepts within the selected area of the field drawing directly on published research to encourage readers to reflect on the content ideas and ongoing debates Using international case studies each chapter will encourage readers to think about ways that the teaching and learning of mathematics reflect different cultural traditions and expectations and enable them to evaluate effective strategies for their own contexts

Deconstructing Social and Cultural Meanings Agnes Macmillan, 2001 This book provides a model and study guide for students undertaking educational and other social science research It demonstrates the use of the postmodern constructs of positioning discursive strategies and agency in order to explain their meanings and the interpretive processes involved in their application The research base of the book examines issues of access and equity in the historical and cultural construction of numerate identities for one group of preservice teachers Back cover

The Psychology of Mathematics Education, 2008-01-01 This book paints an alternative and contemporary portrait of psychology within mathematics education drawing on psychoanalytic practices and theory Mathematics education is still a fairly new social science that began as an adjunct to the practice of mathematics in schools some forty years ago defined by a marriage with cognitive psychology As a consequence school mathematics has often been seen as a scientific enterprise centred on the operation of individual minds confronting mathematical ideas Meanwhile psychoanalysis had earlier come into existence through the work of Sigmund Freud And for much of his life Freud had similarly seen his work as scientific a view that later fuelled mainstream practices in psychology Yet Freud's engagement with his patients combined with his literary capabilities produced surprising results defining humans in ways that transcended mere scientific assessment Rather his accounts of humans weaved a rich social tapestry in which individuals were understood relationally to those who shared their world And through re telling the story lines of their lives individuals were able to create alternative futures This dimension of Freud's work provoked an alternative tradition best exemplified in the work of Lacan in which narrative based understandings linking humans to the social world replaced cognitive models centred on controlling individuals through particular understandings of normality Through its eleven chapters this book

provides accounts of how children teachers researchers and mathematical learning can be understood differently towards emphasising how they are each consequential to the many ways in which the world can be created and described

Meaning in Mathematics Education Jeremy Kilpatrick,Celia Hoyles,Ole Skovsmose,2006-03-30 What does it mean to know mathematics How does meaning in mathematics education connect to common sense or to the meaning of mathematics itself How are meanings constructed and communicated and what are the dilemmas related to these processes There are many answers to these questions some of which might appear to be contradictory Thus understanding the complexity of meaning in mathematics education is a matter of huge importance There are twin directions in which discussions have developed theoretical and practical and this book seeks to move the debate forward along both dimensions while seeking to relate them where appropriate A discussion of meaning can start from a theoretical examination of mathematics and how mathematicians over time have made sense of their work However from a more practical perspective anybody involved in teaching mathematics is faced with the need to orchestrate the myriad of meanings derived from multiple sources that students develop of mathematical knowledge This book presents a wide variety of theoretical reflections and research results about meaning in mathematics and mathematics education based on long term and collective reflection by the group of authors as a whole It is the outcome of the work of the BACOMET Basic COmponents of Mathematics Education for Teachers group who spent several years deliberating on this topic The ten chapters in this book both separately and together provide a substantial contribution to clarifying the complex issue of meaning in mathematics education This book is of interest to researchers in mathematics education graduate students of mathematics education under graduate students in mathematics secondary mathematics teachers and primary teachers with an interest in mathematics

Collaborating to Meet Language Challenges in Indigenous Mathematics Classrooms Tamsin Meaney, Tony Trinick, Uenuku Fairhall, 2011-10-03 Language can be simultaneously both a support and a hindrance to students learning of mathematics When students have sufficient fluency in the mathematics register so that they can discuss their ideas they become chiefs who are able to think mathematically However learning the mathematics register of an Indigenous language is not a simple exercise and involves many challenges not only for students but also for their teachers and the wider community Collaborating to Meet Language Challenges in Indigenous Mathematics Classrooms identifies some of the challenges political mathematical community based and pedagogical to the mathematics register faced by an Indigenous school in this case a Mori immersion school It also details the solutions created by the collaboration of teachers researchers and community members

New Directions for Situated Cognition in Mathematics Education

Anne Watson, Peter Winbourne, 2008-01-03 This book draws together a range of papers by experienced writers in mathematics education who have used the concept of situated cognition in their research within recent years No other books are available which take this view specifically in mathematics education Thus it provides an up to date overview of developments and applications to which other researchers can refer and which will inspire future research Philosophical Dimensions in Mathematics Education Karen Francois, Jean Paul Van Bendegem, 2007-11-15 This book brings together diverse recent developments exploring philosophy of mathematics in education The unique combination of ethnomathematics philosophy history education statistics and mathematics offers a variety of different perspectives from which existing boundaries in mathematics education can be extended The ten chapters in this book offer a balance between philosophy of and philosophy in mathematics education Attention is paid to the implementation of a philosophy of mathematics within the mathematics curriculum to become a philosophy in mathematics education In doing so many chapters provide ideas for actual practice and some practical examples directly usable in teacher training and in mathematics classrooms

Mathematics Education within the Postmodern Margaret Walshaw, 2004-06-01 This timely and accessible book presents a challenge to accepted wisdoms about both the nature of mathematics and of education The authors of this groundbreaking volume bring to bear on this intersection a postmodern sensibility that engages with the grand narratives of mathematics education Thus they provide a key resource for rethinking theory and practice in mathematics education Each of the chapters develops important insights for mathematics education from mainly French intellectuals of the past Foucault Lacan Lyotard Deleuze Each chapter addresses issues relevant to mathematics education researching and teaching mathematics

Researching the Socio-Political Dimensions of Mathematics Education Paola Valero, Robyn Zevenbergen, 2006-04-11 Mathematics education research as a discipline is situated at the confluence of an array of diffuse seemingly incommensurable and radically divergent discourses Research claims that have grown out of mathematics education are wide ranging and antagonistic rather than circumscribed by hidebound disciplinary frames While there has never been a unified totalising discipline of knowledge labelled mathematics education research and while it has always been a contested terrain it is fair to say that the master paradigm out of which this field has been generated has been that of cognitive psychology Mainstream mathematics education knowledges refracting the master discourse of psychology whereby cognition serves as the central privileged and defining concept clearly delimits its possibilities for serving as a social tool of democratic transformation The central point of departure of this new collection is that mathematics education research is insufficiently univocal to support the type of uncompromising interpretation that cognitive psychologists would bring to it The hallmark contribution of this pathbreaking volume edited by Paola Valero and Robyn Zevenbergen is the paradigmatic shift the authors have effected in the field of mathematics education research taking up a position at the faultline of socio cultural analysis and critical pedagogy *Mathematics & Mathematics Education: Searching for Common Ground* Michael

N. Fried, Tommy Dreyfus, 2013-11-29 This book is the fruit of a symposium in honor of Ted Eisenberg concerning the growing divide between the mathematics community and the mathematics education community a divide that is clearly unhealthy for both. The work confronts this disturbing gap by considering the nature of the relationship between mathematics education and mathematics and by examining areas of commonality as well as disagreement. It seeks to provide insight into the mutual benefit both stand to gain by building bridges based on the natural bonds between them. Dialogue and Learning in Mathematics Education Helle Alrø, Ole Skovsmose, 2006-01-02 Dialogue and Learning in Mathematics Education is concerned with communication in mathematics class rooms. In a series of empirical studies of project work we follow students inquiry cooperation as well as students obstructions to inquiry cooperation. Both are considered important for a theory of learning mathematics. Special attention is paid to the notions of dialogue and critique. A central idea is that dialogue supports critical learning of mathematics. The link between dialogue and critique is developed further by including the notions of intention and reflection. Thus a theory of learning mathematics is developed which is resonant with critical mathematics education.

This book is of particular interest to researchers, teachers and curriculum developers in mathematics education. **Refractions of Mathematics Education** Christer Bergsten, Bharath Sriraman, 2015-05-01 The diversity of research in mathematics education has been addressed as both a problem and a strength. When manifested through adherence to different intellectual roots and theoretical orientations, diversions constitute refractions of mathematics education. The collection and analysis of empirical data in a study are by necessity refracted through the specific analytical lens employed as well as the aim of the study itself. Refractions can also refer to looking at old phenomena through new lenses. The chapters in this book are refracted through philosophical, political, mathematical and personal lenses by distinguished authors in the field addressing issues about the elusive experience of doing mathematics, purification of texts, refractions of mathematics and ethnomathematics, political messages in textbook tasks, mathematics education policy debate, the political in mathematics education research, philosophy and mathematics meanings and representations, identity of mathematical modeling and dilemmas in the teaching of calculus. An ancient Sanskrit adage states that Knowledge is something that grows when shared but shrinks when hoarded. Academics engaged in the generation of new Knowledge are

blessed with both the time and the freedom to engage in pursuits that allow for intellectual pleasure As a phenomenon of the Zeitgeist many have succumbed to the increased corporatization of academic work engaging in activities for monetary and self advancement purposes Are there any real intellectuals left in academia a l Adorno Bourdieu Chomsky Foucault among others This Festschrift is dedicated to academics that don t bother with self promotion or aggrandizement of themselves or their ideas in simplistic terms

Mathematics Instruction in Dual Language Classrooms Marco A. Bravo, Kip Téllez, 2024-07-01 Language and culture play a critical role in the teaching of mathematics and this role intensifies when considering the teaching of mathematics in dual language classrooms This book unpacks lessons learned from socio cultural theory being applied to research of the teaching of mathematics to Emergent Bilinguals with the end of informing practice Utilizing a socio cultural lens authors present the possibilities and limits of the teaching of mathematics in dual language programs 90 10 50 50 models Themes of translinguaging disciplinary literacy instruction and culturally responsive instruction are leveraged to test the potential of these constructs to assist Spanish English Emergent Bilinguals access rigorous mathematics content Authors also present limits to these models as often they can overshadow the mathematics learning We embrace a stance where language and literacy are seen as tools for content area learning and not as ends unto themselves

Symbolizing, Modeling and Tool Use in Mathematics Education K.P. Gravemeijer, R. Lehrer, H.J. van Oers, Lieven Verschaffel, 2013-03-09 The almost universal rejection of the notion of symbols as carriers of meaning has created the need to find an alternative for the use of models as embodiments of mathematical concepts By taking its point of departure as a concern for the way students actually use tools and symbols and for what these signify for them this book explores the option of building on symbolizing modelling and tool use as personally meaningful activities of students This theme is approached from different angles and different perspectives One dimension is that of setting varying from the study of informal spontaneous activity of students to an explicit focus on instructional design and goals and effects of instruction Another dimension is the theoretical framework of the researcher varying from constructivism to activity theory cognitive psychology and instructional design theory This book will appeal to a wide audience varying from researchers instructional designers educators and graduate students
