When Are We Ever Going to Use This Stuff? College Mathematics for the Liberal Arts Major (Seventh Edition)

Jim Matovina, Ronald Yates, 2018-09-27 When Are We Ever Going to Use This Stuff College Mathematics for the Liberal Arts

Major is a college level mathematics textbook designed with liberal arts majors in mind. Standard mathematics texts typically mimic the style and tone of those written for STEM track students. This text, while rigorous enough to ensure a high level of mastery over the material, uses practical, entertaining topics presented in a readable, student-centered style to teach mathematics concepts and skills for the non-major. When Are We Ever Going to Use This Stuff emphasizes practical application over symbolic manipulation across several different topics that are ideal for the liberal arts major. Students learn where, when, why, and how the math will help them in their lives. The subject matter includes consumer math, apportionment, statistics, probability, set theory, geometry, right triangle trigonometry, and voting techniques, with the history of mathematics as a consistent motivational thread throughout. Concepts are taught within familiar contexts with a focus on the development of problem-solving skills. When Are We Ever Going to Use This Stuff is a fresh, student-friendly offering for lower division courses that meet the math requirement for liberal arts students.

The Mathematical Gazette, 1922 *Math for Liberal Arts* Karl J. Smith, 2010 [International Handbook of Research in History, Philosophy and Science Teaching](#) Michael R. Matthews, 2014-07-03. This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical, curricular, and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines, as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much-needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national, and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular, and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique encyclopaedic handbook. Gerald Holton, Physics Department, Harvard University. This handbook gathers the fruits of over thirty years' research by a growing international and cosmopolitan community. Fabio Bevilacqua, Physics Department, University of Pavia. [A Mathematics Sampler](#) William P. Berlinghoff, Kerry E. Grant, Dale Skrien, 2001. Now in its fifth edition, *A Mathematics Sampler* presents mathematics as both science and art, focusing on the historical role of mathematics in our culture. It uses selected topics from modern mathematics, including computers, perfect numbers, and four-dimensional geometry, to exemplify the distinctive

features of mathematics as an intellectual endeavor a problem solving tool and a way of thinking about the rapidly changing world in which we live A Mathematics Sampler also includes unique LINK sections throughout the book each of which connects mathematical concepts with areas of interest throughout the humanities The original course on which this text is based was cited as an innovative approach to liberal arts mathematics in Lynne Cheney s report 50 HOURS A Core Curriculum for College Students published by the National Endowment for the Humanities The Proceedings of the 12th International Congress on Mathematical Education Sung Je Cho,2015-02-10 This book comprises the Proceedings of the 12th International Congress on Mathematical Education ICME 12 which was held at COEX in Seoul Korea from July 8th to 15th 2012 ICME 12 brought together 3500 experts from 92 countries working to understand all of the intellectual and attitudinal challenges in the subject of mathematics education as a multidisciplinary research and practice This work aims to serve as a platform for deeper more sensitive and more collaborative involvement of all major contributors towards educational improvement and in research on the nature of teaching and learning in mathematics education It introduces the major activities of ICME 12 which have successfully contributed to the sustainable development of mathematics education across the world The program provides food for thought and inspiration for practice for everyone with an interest in mathematics education and makes an essential reference for teacher educators curriculum developers and researchers in mathematics education The work includes the texts of the four plenary lectures and three plenary panels and reports of three survey groups five National presentations the abstracts of fifty one Regular lectures reports of thirty seven Topic Study Groups and seventeen Discussion Groups Math for Liberal Studies James Hamblin,2014-03-19 *Femininity, Mathematics and Science, 1880-1914* C. Jones,2009-10-15 Through the prism of gender this text explores the contrasting cultures and practice of mathematics and science and asks how they impacted on women Claire Jones assesses nineteenth century ideas about women s intellect femininity and masculinity and assesses how these attitudes shaped women s experiences as students and practitioners
