Mathematics from Leningrad to Austin, Volume 2 Rudolph A. Lorentz,1997-07-15 The works of George G Lorentz spanning more than 60 years have played a significant role in the development and evolution of mathematical analysis The papers presented in this volume represent a selection of his best works along with commentary from his students and colleagues   Mathematics from Leningrad to Austin Rudolph A. Lorentz,2012-08-14 This Select a contains approximately two thirds of the papers my 1932 to 1994 These papers are divided into four fields father wrote from The first volume contains the papers on 1 Summability and Number Theory and 2 Interpolation The second volume contains the fields 3 Real and Functional Analysis and 4 Approximation Theory Each of these four groups of papers is introduced by a review of the contents and significance respectively of the impact of these papers The first volume contains in addition an autobiography a complete list of publications a list of doctoral students and four unpublished essays on mathematics in general a A report on the University of Leningrad b On the work of the mathematical mind c Proofs in Mathematics d About Mathematical books The report on the University of Leningrad written in the late 40 s is a unique historical document which is still of current interest for several reasons It is of interest for professional reasons since it contains a com plete description of a mathematics majors curriculum through his entire course of studies From it one can see both the changes and invariants of course material as well as the students course load Then one can also see the consequences of admittedly extreme political intervention in uni versity affairs Today we use the term politically correct but in those times being politically correct was a matter of life and death   Mathematics from Leningrad to Austin Rudolph A. Rubshtein,Genady Ya. Grabarnik,Mustafa A. Muratov,Yulia S. Nohel,D.H. Sattinger,Gian-Carlo Rota,1997-12-18 The deep and original ideas of Norman Levinson have had a lasting impact on fields as diverse as differential integral equations harmonic complex stochas tic analysis and analytic number theory during more than half a century Yet the extent of his contributions has not always been fully recognized in the mathematics community For example the horseshoe mapping constructed by Stephen Smale in 1960 played a central role in the development of the modern theory of dynami cal systems and chaos The horseshoe map was directly stimulated by Levinson s research on forced periodic oscillations of the Van der Pol oscillator and specifi cally by his seminal work initiated by Cartwright and Littlewood In other topics Levinson provided the foundation for a rigorous theory of singularly perturbed dif ferential equations He also made fundamental contributions to inverse scattering theory by showing the connection between scattering data and spectral data thus relating the famous Gel fand Levitan method to the inverse scattering problem for the

Schrodinger equation He was the first to analyze and make explicit use of wave functions now widely known as the Jost functions Near the end of his life Levinson returned to research in analytic number theory and made profound progress on the resolution of the Riemann Hypothesis Levinson s papers are typically tightly crafted and masterpieces of brevity and clarity It is our hope that the publication of these selected papers will bring his mathematical ideas to the attention of the larger mathematical community **The Bulletin of Mathematics Books** ,1992 *Books in Print* ,1991 **Mathematical Reviews** ,1998 **Mathematics from Leningrad to Austin** George G.
