

Mathematics should be motivating and interesting (Sparrow, 1994)

“When students are genuinely engaged in solving mathematical problems that make sense to them, the learning they take away from that experience is likely to be deep and lasting” (Reys, 2009 p. 39).

is not a universally popular subject neither within nor outside of school There are those who love it but many do not and it is not uncommon for people to take a perverse pride in being bad at it This book argues that while much needed improvements to mathematics teaching are necessary to address such issues they are insufficient without also imbuing children with the character required to learn it effectively Teachers of mathematics are responsible not only for applying skilful pedagogy but also for developing a productive learning culture within the mathematics classroom We need to consider the emotional and social impact on children of teachers own attitudes and beliefs about mathematics and how children should be taught it Sometimes provocative and irreverent but always stimulating and lucid Presenting Children to Maths is an original and profound discussion about how students ability and success in mathematics depends largely on how their disposition and will are shaped towards learning it **Learning to Teach Mathematics in the Secondary School** Sue Johnston-Wilder,Clare Lee,David Pimm,2016-09-13 Learning to Teach Mathematics in the Secondary School combines theory and practice to

Computational Experiment Approach to Advanced Secondary Mathematics Curriculum Sergei Abramovich, 2014-05-08 This book promotes the experimental mathematics approach in the context of secondary mathematics curriculum by exploring mathematical models depending on parameters that were typically considered advanced in the pre digital education era This approach by drawing on the power of computers to perform numerical computations and graphical constructions stimulates formal learning of mathematics through making sense of a computational experiment It allows one in the spirit of Freudenthal to bridge serious mathematical content and contemporary teaching practice In other words the notion of teaching experiment can be extended to include a true mathematical experiment When used appropriately the approach creates conditions for collateral learning in the spirit of Dewey to occur including the development of skills important for engineering applications of mathematics In the context of a mathematics teacher education program the book addresses a call for the preparation of teachers capable of utilizing modern technology tools for the modeling based teaching of mathematics with a focus on methods conducive to the improvement of the whole STEM education at the secondary level By the same token using the book's pedagogy and its mathematical content in a pre college classroom can assist teachers in introducing students to the ideas that develop the foundation of engineering profession
