Mathland Student:

Exemplary Promising Mathematics Programs, 1999 [Building a Positive Math Identity](#) Liesl McConchie, 2025-09-01

When brain science meets math success Emotions drive learning This is an essential component of understanding how a student's math identity is closely connected to their math success How a student sees themselves in relation to math is dynamically constructed in their brain and is constantly changing Every learner deserves to exist in harmony with mathematics This book shows you how to make that mantra a reality for all students Liesl McConchie offers an exciting new perspective on math identity through her extensive research on how the brain learns Liesl walks readers through cognitive neuroscience in a humorous and friendly way using metaphors and everyday stories to explain how emotions and cognition interact She offers engaging and simple brain based strategies and activities to implement in the classroom In *Building a Positive Math Identity A Brain Science Approach* Liesl Translates complex brain science principles for educators in an accessible and engaging way Provides practical exercises and lessons that you can use in classroom right away Shares real world stories that provide deeper insight into how math identity is shaped over the years Offers activities to help teachers gain insight into the math identities of our students Guides teachers to explore our own math identity and the impact it can have on our students Most important the book pushes back on the prevailing message about math identity that tends to focus on student efficacy alone This approach puts the burden on the individual which can lead to additional oppression of those who have been most marginalized in math Here's our opportunity as educators to reexamine what it means to have a positive math identity and to learn to use brain based tools to build on a positive math identity for our students from the earliest ages

California Dreaming Suzanne M. Wilson, 2008-10-01 This compelling book tells the history of the past two decades of efforts to reform mathematics education in California That history is a contentious one full of such fervor and heat that participants and observers often refer to the math wars Suzanne M Wilson considers the many perspectives of those involved in math reform weaving a tapestry of facts philosophies conversations events and personalities into a vivid narrative While her focus is on California the implications of her book extend to struggles over education policy and practice throughout the United States Wilson's three dimensional account of math education reform efforts reveals how the debates tend to be deeply ideological and how people come to feel misunderstood and misrepresented She examines the myths used to explain the failure of reforms the actual reasons for failure and the importance of taking multiple perspectives into account when planning and implementing reform *MathLand: Student resource book* Linda Charles, 1998 *Mathematics and Science Curriculum Programs*, 2002 [A Journey Through Math-Land](#) Reza Noubary, 2021-11-02 If you look at math by eyes you see symbols by brain knowledge by heart truth and by soul God This book is about flying over math land enjoying the view and landing safely It seems inconceivable how much we rely on mathematics numbers in our daily lives and how natural it feels Our birth is announced by a set of numbers representing the time date and our height and weight We become a functioning

member of society only after a Social Security number is assigned to us Our health and fitness are evaluated using numbers representing our blood pressure heart rate body temperature and so on From that point onward every action performed and every life encountered becomes part of our ongoing use of mathematics numbers This book traces applications of mathematics The goal is to find a way to delight readers about the discipline and open the door for them to see its beauty by presenting a variety of applications It is particularly useful for the individuals with some mathematics background or interests

Jabbaar-Gyambrah,Seneca Vaught,2022-12-14 The Roadmap to Investing in Yourself The Real Costs of a College Education 2nd Edition discusses many of the economic misconceptions about earning a college degree While it is widely believed that attending college in itself guarantees wealth thinking of a college degree as a commodity has kept students parents and higher education professionals from understanding the full range of short term and long term costs This book illustrates how the promotion of education merely as a commodity comes at a high price for both the individual and society Authors Tara Jabbaar Gyambrah and Seneca Vaught argue that the idea of investment must shift from a short sighted view focusing only on economic concerns to a broader and more holistic understanding of what college costs and what students can expect in return

Computer Environments for Children Cynthia Solomon,1988-07 In this book Cynthia Solomon takes a welcome look at the possibilities and issues of learning with and about computers in schools or in any other learning environment

Is College a Lousy Investment? Tara Jabbaar-Gyambrah,Seneca Vaught,2018-02-22 Is College a Lousy Investment Negotiating the Hidden Cost of Higher Education discusses many of the economic misconceptions about earning a college degree While it is widely believed that attending college guarantees wealth and success students concerned parents and higher education professionals have neglected calculating the full range of short term and long terms costs Our work illustrates how the promotion of education merely as a commodity come at a high price for the individual and society We argue how the idea of investment can be expanded from a short sighted view to engage a broader more holistic rationale for higher education from which students can expect a full return on investment
