A seris of scientific essays Joseph John Murphy, 1869 Frontiers in Crystalline Matter National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee for an Assessment of and Outlook for New Materials Synthesis and Crystal Growth, 2009-10-27 For much of the past 60 years the U S research community dominated the discovery of new crystalline materials and the growth of large single crystals placing the country at the forefront of fundamental advances in condensed matter sciences and fueling the development of many of the new technologies at the core of U S economic growth The opportunities offered by future developments in this field remain as promising as the achievements of the past However the past 20 years have seen a substantial deterioration in the United States capability to pursue those opportunities at a time when several European and Asian countries have significantly increased investments in developing their own capacities in these areas This book seeks both to set out the challenges and opportunities facing those who discover new crystalline materials and grow large crystals and to chart a way for the United States to reinvigorate its efforts and thereby return to a position of leadership in this field
