Free Will: Concepts and challenges John Martin Fischer, 2005 [How Matter Matters](#) Paul R. Carlile, Davide Nicolini, Ann Langley, Haridimos Tsoukas, 2013-03-28 Although human lives towards the second half of the twentieth century became increasingly mediated by objects and artifacts and have depended heavily on the functioning of technical systems materiality in a broad sense became relatively marginalized as a topic of research interest This volume contributes to redressing the balance by drawing together the work of scholars involved in exploring the sociomaterial dimensions of organizational life It will look at the way material objects and artifacts are conceived in organizations and how they function in interaction with human agents The book offers a new conceptual repertoire and vocabulary that allows deeper thought and discussion about the inherent entanglement of the social and material Like the preceding volumes in the Perspectives on Process Organization Studies series the book displays the richness that characterizes process thinking and combines philosophical reflections with novel conceptual perspectives and insightful empirical analyses

Introduction to

Topological Quantum Matter & Quantum Computation Tudor D. Stanescu, 2016-12-19 What is topological about topological quantum states How many types of topological quantum phases are there What is a zero energy Majorana mode how can it be realized in a solid state system and how can it be used as a platform for topological quantum computation What is quantum computation and what makes it different from classical computation Addressing these and other related questions Introduction to Topological Quantum Matter Quantum Computation provides an introduction to and a synthesis of a fascinating and rapidly expanding research field emerging at the crossroads of condensed matter physics mathematics and computer science Providing the big picture this book is ideal for graduate students and researchers entering this field as it allows for the fruitful transfer of paradigms and ideas amongst different areas and includes many specific examples to help the reader understand abstract and sometimes challenging concepts It explores the topological quantum world beyond the well known topological insulators and superconductors and emphasizes the deep connections with quantum computation It addresses key principles behind the classification of topological quantum phases and relevant mathematical concepts and discusses models of interacting and noninteracting topological systems such as the toric code and the p wave superconductor The book also covers the basic properties of anyons and aspects concerning the realization of topological states in solid state structures and cold atom systems Quantum computation is also presented using a broad perspective which includes fundamental aspects of quantum mechanics such as Bell's theorem basic concepts in the theory of computation such as computational models and computational complexity examples of quantum algorithms and elements of classical and quantum information theory The Go-To Guide for Engineering Curricula, Grades 9-12 Cary I.

Threshold Concepts within the Disciplines, 2008-01-01 Threshold Concepts within the Disciplines brings together leading writers from various disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education The foundational principle of threshold concepts is that there are in each discipline conceptual gateways or portals that must be negotiated to arrive at important new understandings In crossing the portal transformation occurs both in knowledge and subjectivity Such transformation involves troublesome knowledge a key concern for contributors to this book who identify threshold concepts in their own fields and suggest how to deal with them Part One extends and enhances the threshold concept framework containing chapters that articulate its qualities its links to

other social theories of learning and other traditions in educational research Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing engineering biology design modern languages education and economics In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts Other chapters emphasise the equally important being and becoming dimension of learning Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers The book will be of interest to disciplinary teachers educational researchers and educational developers It also is of relevance to issues in quality assurance and professional accreditation How Groups Matter Gideon Calder, Magali Bessone, Federico Zuolo, 2014-04-11 When groups feature in political philosophy it is usually in one of three contexts the redressing of past or current injustices suffered by ethnic or cultural minorities the nature and scope of group rights and questions around how institutions are supposed to treat a certain specific identity cultural ethnic group What is missing from these debates is a comprehensive analysis of groups as both agents and objects of social policies While this has been subject to much scrutiny by sociologists and social psychologists it has received less attention from a normative and philosophical point of view This volume asks what problems are posed to political philosophy by a collection of individuals who act or are treated in a collective way Focusing not only on ways in which institutions should treat groups but also on the normative implications of considering groups as possible social agents when acting either in vertical relations with the state or in horizontal relations with other groups or individuals this book explores these issues from both theoretical and practical perspectives Contributors address both the nature of political and social philosophy itself and the ways in which specific issues affirmative action race religion and places of worship the rights of states have become political and social priorities Matter of Life , 1996-10

What If? Ronald A. Beghetto, 2018-08-28 If a fundamental goal of schooling is to prepare young people for the unknowable future why do we assign students so many clearly defined tasks with predetermined solutions According to educator and creativity expert Ronald A Beghetto the best way to unleash students problem solving and creativity and thus prepare them to face real world problems is to incorporate complex challenges that teach students to respond productively to uncertainty In this thought provoking book Beghetto explains How to foster possibility thinking to help students open up their thinking in creative sometimes counterintuitive ways The process of lesson unplanning a way of transforming existing lessons activities and assignments into more complex classroom challenges Four basic action principles that teachers and students can use to design and solve complex challenges both inside and outside the classroom The steps for creating legacy challenges which require students to identify a problem develop a solution and ensure that their work makes a lasting contribution With planning forms and detailed sample activities this practical guide will enable teachers at every grade level to design a full range of challenges in any subject area Invite uncertainty into your classroom and discover what your

Why Human Rights Still Matter in Contemporary Global Affairs Mahmood Monshipouri, 2020-04-29 This book elucidates why human rights still matter in contemporary global affairs and what can lead to better protection of international human rights in a post liberal order It blends theoretical empirical and normative perspectives while providing much needed analysis in light of the perils of populism authoritarianism and toxic nationalism as well as highlighting the hopes with which people around the world view human rights in the new millennium Systematically combining theoretical perspectives from across the disciplines with numerous case studies it demonstrates not only the complexities of the domestic conditions involved but also the ways in which human dignity can be preserved and promoted during periods of rapid change and uncertainty Finally the book addresses the question of how to protect human rights in such a world in which the active promotion of democratic values and enforcement of human rights may not be necessarily aligned with evolving economic and geopolitical interests of many great and diverse powers on the global scene As such it is a timely intervention for human rights as a concept as it has been attacked and eroded by the instability in our world today This book will be of key interest to scholars and students of human rights in politics law philosophy sociology and history and to humanitarian bodies practitioners and policy makers
