thesis provides a detailed and comprehensive description of the search for New Physics at the Large Hadron Collider LHC in the mono jet final state using the first 3 2 fb<sup>-1</sup> of data collected at the centre of mass energy of colliding protons of 13 TeV recorded in the ATLAS experiment at LHC The results are interpreted as limits in different theoretical contexts such as compressed supersymmetric models theories that foresee extra spatial dimensions and in the dark matter scenario In the latter the limits are then compared with those obtained by other ATLAS analyses and by experiments based on completely different experimental techniques highlighting the role of the mono jet results in the context of dark matter searches Lastly a set of possible analysis improvements are proposed to reduce the main uncertainties that affect the signal region and to increase the discovery potential by further exploiting the information on the final state      *The New Physics* Paul Davies,P. C. W. Davies,1989 The New Physics is a sweeping survey of developments in physics up to the present day All of the major topics at the frontiers of the subject have been covered in this collection of reviews Whether the reader wants to know about the ultimate building blocks of matter the structure origin and evolution of the Universe quantum gravity low temperature physics optics and lasers chaos or quantum mechanics this widely acclaimed book contains a clear explanation by one of the

top scientists working in the field Aimed at scientists and laymen alike the articles are profusely illustrated throughout with colour photographs and clear explanatory diagrams and have been meticulously edited to ensure they will appeal to a wide range of readers In this single volume Paul Davies renowned for his ability to communicate advanced topics to the non specialist has gathered an exciting collection of reviews by many of the world's top physicists Matter and light Louis de Broglie,1955 Revival: Philosophy and the Physicists (1937) Lizzie Susan Stebbing,2018-05-08 This book is written by a philosopher for other philosophers and for that section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment We common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories nor to decide what precisely are their implications We are dependent upon the scientists for an exposition of those developments which so we find them proclaiming have important and far reaching consequences for philosophy Unfortunately however our popular expositors do not always serve us very well The two who are most widely read in this country are Sir Arthur Eddington and Sir James Jeans They are not always reliable guides Their influence has been considerable upon the reading public upon theologians and upon preachers they have even misled philosopher who should have known better Accordingly it has seemed to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based

**Physicists** Dean Miller,2014-01-01 In this book a breakdown of the life and work of some of history's pioneers in the study of physics are thoroughly explored Notable physicists include Albert Einstein Stephen Hawking Isaac Newton and Galileo Galilei Their contribution to science and human kind is insurmountable This book provides excellent biographical sketches for trailblazers in physics Specific articles are devoted to the above mentioned scientists among others covering the contributions to their field specifically addressing how their research discoveries and inventions impacted human understanding and experience Men Who Made a New Physics Barbara Lovett Cline,1987-06-15 Cline recounts the development of quantum theory capturing the atmosphere of argument and discovery among physicists in the 1920s She explores the backgrounds of the major figures Rutherford Bohr Planck Einstein separately but draws them together as they begin to consider each other's questions about the nature of matter 8th Workshop on Theory, Phenomenology and Experiments in Flavour Physics Giulia Ricciardi,Guglielmo De Nardo,Mario Merola,2023-07-25 This book is a collection of invited contributions presented at the 8th edition of the International Workshop on Theory Phenomenology and Experiments in Flavour Physics held on the Island of Capri Italy on 11-13 June 2022 It is a joint workshop between experimentalists and theoreticians aiming at debating recent results and hot topics in flavour physics in an interdisciplinary effort Flavour electroweak physics and neutrino physics are all foremost in the assessment of results within the standard model and search for physics beyond Anomalies in flavour physics are hints on new physics while with neutrino masses and oscillations the new physics has already started Contributions deal mainly with the flavour anomalies the flavour problem from leptons to quarks

and back including continuous versus discrete symmetries and the connections between the Higgs sector and neutrinos embracing see saw models and Higgs potential analyses Focus is on neutrinos at high and low scales including LHC searches and CLVF leptogenesis connections with dark sectors and NP mediators non standard neutrino interactions and the problem of the nature of massive neutrinos     **The New Physics** Joseph Battell,1909     Report India (Dominion).
