

The National Cultural Resources Information Management System (NCRIMS)

New Horizons for Cultural Resources Data Management and Analyses

F. Kirk Halford  and Dayna M. Ables

ABSTRACT

Despite making great strides over the past 50 years, cultural resources data management and synthesis continues to be elusive and nonstandardized, with each state and agency developing disparate systems that do not easily mesh. The Bureau of Land Management (BLM) has embarked on a national initiative by creating a National Cultural Resources Data Standard (NCRDS) that works to address many long-standing data organization issues. The NCRDS allows for the application of more rigorous data management principles that facilitate landscape-level planning and data modeling on BLM-administered lands across the western United States. The NCRDS and associated National Cultural Resources Information Management System (NCRIMS) contains normalized data from 11 western State Historic Preservation Offices (SHPOs) and BLM data stores. NCRIMS is a web-based application hosted by the BLM's National Operations Center (NOC) Enterprise Geographic Information System (EGIS). NCRIMS allows for high-level planning during local, regional, and multistate project analyses and undertakings, facilitating consideration of cultural heritage values early in the planning process versus late stages as has been traditional. This allows the BLM to more proactively, effectively, and efficiently answer data calls and inform agency decision-makers on possible impacts to cultural heritage resources by proposed or ongoing agency actions.

Pese a los avances de los últimos 50 años, la gestión y síntesis de los datos del patrimonio cultural son complejos ya que cada agencia y Estado utiliza sistemas dispares no-estandarizados que son difíciles de homologar. Dada esta situación, el Bureau of Land Management (BLM) ha desarrollado el National Cultural Resources Data Standard (NCRDS), una iniciativa de nivel nacional que aborda los problemas de organización de macrodatos. El NCRDS aplica rigurosos principios de gestión de datos que facilitan la planificación, a nivel de paisaje y modelos, en las tierras administradas por el BLM en toda la zona oeste de los Estados Unidos. El NCRDS y el National Cultural Resources Information Management System (NCRIMS) asociado, contienen datos normalizados de 11 Estados del oeste (BLM) y de la State Historic Preservation Offices (SHPOs). NCRIMS es una aplicación web auspiciada por el Enterprise Geographic Information System (EGIS) del National Operations Center (NOC) de BLM. NCRIMS permite un alto nivel de planificación durante la ejecución y análisis de proyectos locales, regionales y multi-estatales. Esto facilita la consideración de los valores patrimoniales desde primeras etapas del proceso de planificación, en lugar de que éstos sean evaluados en las etapas finales, como se ha hecho tradicionalmente. BLM puede así responder de manera proactiva, efectiva y eficiente a las consultas de datos. Además, las agencias involucradas pueden ser informadas por la BLM sobre el posible impacto que acciones propuestas o en curso pueden tener sobre el patrimonio cultural.

Large landscape-scale planning efforts, policies (see *Secretarial Orders* [SO] 3330 and 3336, and interstate undertakings have brought to the forefront the need for effective and efficient ways to manage and analyze spatial information on archaeological and historic sites for cultural resources management (CRM). Over the past several years, more calls for landscape-level approaches to

analyzing the past have been promoted (Altschul 2016; Bureau of Land Management [BLM] 2012; Doelle et al. 2016; Halford 2019; Heinen and Altschul 2019; McManamon et al. 2016; Murtha et al. 2019) versus “site-centric” methods, which have been the historic norm in CRM. Site-centric approaches are due, in part, to the fact that CRM has been caught in a sort of “methodological
