Wertz,Kathy Charmaz,Linda M. McMullen,Ruthellen Josselson,Rosemarie Anderson,Emalinda McSpadden,2011-06-17 This unique text provides a broad introduction to qualitative analysis together with concrete demonstrations and comparisons of five major approaches Leading scholars apply their respective analytic lenses to a narrative account and interview featuring Teresa a young opera singer who experienced a career changing illness The resulting analyses vividly exemplify what each approach looks like in action The researchers then probe the similarities and differences among their approaches their distinctive purposes and strengths the role style and subjectivity of the individual researcher and the scientific and ethical complexities of conducting qualitative research Also included are the research participant s responses to each analysis of her experience A narrative account from another research participant Gail can be used by readers to practice the kinds of analysis explored in the book Human Sciences and Human Interests Mikael Klintman,2016-08-05 Within the disciplines of social economic and evolutionary science a proud ignorance can often be found of the other areas approaches This text provides a novel intellectual basis for breaking this trend Certainly Human Sciences and Human Interests aspires to open a broad debate about what scholars in the different human sciences assume imply or explicitly claim with regard to human interests Mikael Klintman draws the reader to the core of human sciences how they conceive human interests as well as how interests embedded within each discipline relate to its claims and recommendations Moreover by comparing theories as well as concrete examples of research on health and environment through the lenses of social economic and evolutionary sciences Klintman outlines an integrative framework for how human interests could be better analysed across all human sciences This fast paced and modern contribution to the field is a necessary tool for developing any human scientist s ability to address multidimensional problems within a rapidly changing society Avoiding dogmatic reasoning this interdisciplinary text offers new insights and will be especially relevant to scholars and advanced students within the aforementioned disciplines as well as those within the fields of social work social policy political science and other neighbouring disciplines Human Mastery Ej Laurence,2008 This book represents a turning point in my philosophy stemming from my experiences as an advocate for

social justice For many years I have observed seemingly unsolvable human conflicts the generational damage of bad choices and the perils of rigid social and economic inequality I watched one social issue after another emerge each as dire as the last I began to wonder as many do from time to time if I am really making a difference As an avid reader of science magazines I began to transfer my interest in the concept of a unifying principle from science to social philosophy I began to wonder if there was one principle that could explain the myriad of human conflicts and suffering and perhaps more importantly offer some guidance on a solution From this curiosity grew serious research into human understanding and eventually my philosophy on the purpose of life This book is primarily written from one type of person to others who share the same three traits being dedicated to making the world a better place frustrated by realizing that we appear to be losing ground fast and open to a new context for human life

The Conscious Mind and the Material World Douglas M. Stokes, 2015-01-24 What makes us who we are From a scientific viewpoint any individual's existence is improbable at best Consciousness as an actuality is inarguable its nature however remains elusive This work argues the view of self as a field of pure consciousness debating the existence of a continuing self and drawing conclusions about this entity and its relation to the physical body and the physical world Beginning with an exploration of the relationship between mind and matter it discusses ostensible psi phenomena such as extra sensory perception and psychokinesis and their implications for our understanding of the mind and the cosmos Additional topics include the perennial mind body problem the role of consciousness in quantum mechanics and conversely the role of quantum mechanics in the study of consciousness the anthropic principle and evidence for Intelligent Design Quasi religious questions such as the survival of consciousness after death are also addressed

The Future of Human Space Exploration Giovanni Bignami, Andrea Sommariva, 2016-06-30 For several decades it has been widely accepted that human space exploration is the exclusive domain of government agencies The cost of performing such missions estimated in multiple reports to amount to hundreds of billions dollars over decades was far beyond what private entities could afford That arrangement seems to be changing Buoyed by the success of its program to develop commercial cargo capabilities to support the International Space Station NASA is becoming increasingly open to working with the private sector in its human space exploration plans The new private public partnership will make planet hopping feasible This book analyses the move towards planet hopping which sees human outposts moving across the planetary dimensions from the Moon to Near Earth Asteroids and Mars It critically assesses the intention to exploit space resources and how successful these missions will be for humanity This insightful and accessible book will be of great interest to scholars and students of space policy and politics international studies and science and technology studies
