The Public Opinion Process Irving Crespi, 2013-11-05 What is public opinion How can we best study it This work presents a process model that answers these questions by defining public opinion in a way that also identifies an approach to studying it The model serves as a framework into which the findings of empirical research are integrated producing a comprehensive understanding of public opinion that encompasses the congeries of middle range theories that have emerged from empirical research The three dimensional process model and the way it is explicated satisfies the diverse and sometimes divergent needs and interests of political scientists sociologists social psychologists and communication specialists who study public opinion This is achieved by clearly differentiating and interrelating the following individual opinions the judgmental outcomes of a process in which attitudinal systems comprised of beliefs values interests and feelings function as intervening variables that direct and structure perceptions of public issues collective opinions the outcomes of communication from which mutual awareness emerges and that integrate separate individual opinions into a significant social force and political roles of collective and individual opinions the outcomes of the extent to which collective and individual opinions have achieved legitimacy as the basis for governing a people

DON T USE THIS PARAGRAPH FOR GENERAL CATALOGS Each dimension of the model has its corresponding subprocess transactions between individuals and their environments communications among individuals and collectives and political legitimation of public opinion Since the process model is by definition interactional none of the three dimensions has theoretical or sequential priority over the others Instead of treating the psychological political and sociological aspects of public opinion as separate stages of an unidirectional process the three aspects are modeled as dimensions of a complex ongoing system in continuous interaction with each other This conceptualization satisfies the need for a truly interdisciplinary theory in that it demands that each dimension be studied in terms of its defining sub process It also avoids the twin errors of reductionism

Shortening the Distance between Government and Public in China II Liu Xiaoyan, 2020-12-15 Distance in its traditional sense connotes estrangement and division But in the context of modern political studies it means a controllable resource which can be manipulated to change the relationship between the government and the public Drawing on this concept from western political science the author explores the law and mechanisms of China's political communication In this volume the author introduces the empirical investigation of the distance between government and the public in China First it discusses how the use of online social media such as Weibo can be used strategically to mediate the distance of offline communication Then it points out that social media can also lead to unlimited expression of general will to which governments should pay attention An empirical study on how rural residents of five provinces in China obtain political information is used to illustrate the point Students and scholars who are interested in political science and political communication especially Chinese politics would find this title a useful reference Datafication of Public Opinion and the Public Sphere Slavko Splichal, 2022-07-12 The book anchored in stimulating debates about the Enlightenment ideas of publicness analyses

historical changes in the core phenomena of publicness possibilities conditions and obstacles to developing a public sphere in which the public reflexively creates articulates and expresses public opinion It is focused on the historical transformation from public use of reason through the identification of public opinion in opinion polls to contemporary opinion mining in which the Enlightenment idea of public expression of opinion has been displaced by the technology of extracting opinions It heralds a new critical impetus in theory and research of publicness at a time when critical social thought is sharply criticising and even abandoning the notion of the public sphere much like the notion of public opinion decades ago due to its predominantly administrative use Encyclopedia of Political Communication Lynda Lee Kaid, Christina Holtz-Bacha, 2008
