Pulling Back From The Nuclear Brink Reducing And Countering Nuclear Threat:

Pulling Back from the Nuclear Brink Barry R. Schneider, William L. Dowdy, 1998 The contributors to this book including policymakers diplomats scientists regionalists and academic specialists have joined in an effort to survey nuclear arms control successes ongoing initiatives and future prospects for reducing and countering nuclear proliferation **United States Post-Cold War Defence Interests** K. Magyar, 2004-04-30 With the end of the Cold War the security concerns of the USA the sole Superpower in the new international order became fragmented and proliferated throughout the world Since September 11 2001 and the war in Iraq the US has had to evaluate new global developments in terms of the threats they pose to regional and global stability The nature of the potential enemy is difficult to anticipate United States Post Cold War Defence Interests gathers together seasoned analysts to examine traditional military concerns and responses to the new environment *Psychology of a Superpower* Christopher Fettweis, 2018-05-15 With the collapse of the Soviet Union the United States was left as the world's sole superpower which was the dawn of an international order known as unipolarity The ramifications of imbalanced power extend around the globe including the country at the center What has the sudden realization that it stands alone atop the international hierarchy done to the United States In *Psychology of a Superpower* Christopher J Fettweis examines how unipolarity affects the way U S leaders conceive of their role make strategy and perceive America's place in the world Combining security strategy and psychology Fettweis investigates how the idea of being number one affects the decision making of America's foreign policy elite He examines the role the United States plays in providing global common goods such as peace and security the effect of the Cold War's end on nuclear weapon strategy and policy the psychological consequences of unbalanced power and the grand strategies that have emerged in unipolarity Drawing on psychology's insights into the psychological and behavioral consequences of unchecked power Fettweis brings new insight to political science's policy analysis toolkit He also considers the prospect of the end of unipolarity offering a challenge to widely held perceptions of American indispensability and asking whether the unipolar moment is worth trying to save *Psychology of a Superpower* is a provocative rethinking of the risks and opportunities of the global position of the United States with significant consequences for U S strategy character and identity *Nuclear Proliferation in Northeast Asia* A. O'Neil, 2007-10-01 To what extent does the failing strategy of nonproliferation pose serious challenges for Northeast Asia's security environment Are there alternative strategies for managing nuclear weapons in the region Should the presence of nuclear weapons in Northeast Asia necessarily be seen in exclusively negative terms as many experts believe **Strategy in the Second Nuclear Age** Toshi Yoshihara, James R. Holmes, 2012-10-22 A second nuclear age has begun in the post Cold War world Created by the expansion of nuclear arsenals and new proliferation in Asia it has changed the familiar nuclear geometry of the Cold War Increasing potency of nuclear arsenals in China India and Pakistan the nuclear breakout in North Korea and the potential for more states to cross the nuclear weapons threshold from Iran to Japan suggest that the second

nuclear age of many competing nuclear powers has the potential to be even less stable than the first Strategy in the Second Nuclear Age assembles a group of distinguished scholars to grapple with the matter of how the United States its allies and its friends must size up the strategies doctrines and force structures currently taking shape if they are to design responses that reinforce deterrence amid vastly more complex strategic circumstances By focusing sharply on strategy that is on how states use doomsday weaponry for political gain the book distinguishes itself from familiar net assessments emphasizing quantifiable factors like hardware technical characteristics and manpower While the emphasis varies from chapter to chapter contributors pay special heed to the logistical technological and social dimensions of strategy alongside the specifics of force structure and operations They never lose sight of the human factor the pivotal factor in diplomacy strategy and war

Historical Dictionary of Arms Control and Disarmament Jeffrey A. Larsen, James M. Smith, 2005-03-25 Historical Dictionary of Arms Control and Disarmament also provides information that is comprehensible to all readers Jeffrey A Larsen and James M Smith present a context for the broader range of international relations at a given point in time extending the utility of the dictionary beyond just a narrow examination of arms control BOOK JACKET *Out of (South) Africa* Roy E. Horton, 2000 *Avoiding the Abyss* Barry R. Schneider, Jim A. Davis, 2006-05-30 In December 1993 Secretary of Defense Les Aspin announced the Counterproliferation Initiative a response to President Clinton's assertion that if we do not stem the proliferation of the world's deadliest weapons no democracy can feel secure This timely book brings together contributions from a wide range of experts to help readers understand how far the nation has come since then and what still needs to happen Insightful essays examine arms control treaty programs export control regimes interdiction diplomatic economic political persuasion and sanctions deterrence counterforce active and passive defense and consequence management Many positive changes have occurred since 1993 Regime changes in Iraq and South Africa have removed some WMD proliferation threats Saddam Hussein has been overthrown and a new Iraq is beginning to emerge South Africa's clandestine WMD program has apparently ended Libya announced it has given up its efforts to have active WMD programs The Taliban and al Qaeda have been routed in Afghanistan probably delaying efforts to develop or buy WMD Yet states continue to develop and export WMD and or their delivery systems As many as 30 states are still believed to have either a nuclear biological or chemical weapons program Some have all three India and Pakistan have acknowledged programs Abdul Qadeer Khan the scientist who directed the Pakistani A bomb program has admitted selling nuclear weapons designs and nuclear enrichment equipment to Libya Iran and North Korea His colleagues have held discussions with al Qaeda representatives Ayman Al Zawahiri number two in the al Qaeda chain of command claims that the terrorist organization has several suitcase A bombs from the Former Soviet Union It appears clear to many that Iran has a desire to develop nuclear weapons Syria still has a chemical weapons program North Korea's WMD profile has escalated As *Avoiding the Abyss* so convincingly demonstrates much has been accomplished since the Counterproliferation Initiative was launched but much work still lies ahead It is an

important story for every American

Preventing the Use of Weapons of Mass Destruction Eric Herring, 2013-01-11

These studies concentrate on preventing the use of weapons of mass destruction A common argument runs through all of the papers that while complacency must be avoided much of the post Cold War focus among Western governments on the threat posed by weapons of mass destruction is alarmist

Future War and Counterproliferation Barry R.

Schneider, 1999-02-28 The United States faces a small number of rogue states that either have or are working to acquire weapons of mass destruction These NASTIs or NBC Arming Sponsors of Terrorism and Intervention include such states as North Korea Iraq Iran Libya and Syria U S nonproliferation programs and policies have helped to keep this number small but U S and allied counterproliferation programs are essential to reduce the danger It is up to deterrence active defenses passive defenses decontamination and counterforce to turn enemy weapons of mass destruction into instruments of limited destructive effect Warfighters will also have to adopt a different strategy and concept of operations in fighting an adversary that is so heavily armed This strategy will feature a combination of deception dispersion mobility and maneuver diffused logistics remote engagement missile defense bubbles non combatant evacuation operations and large area decontamination It will also involve upgrades to NBC passive defense measures and equipment as well as a counterforce capability that can find and destroy a variety of adversary targets including mobile launchers and deeply buried and hardened underground structures

Mousseau T **Nuclear Russia** Paul Josephson, 2022-10-20 In the first cultural and political history of the Russian nuclear age Paul Josephson describes the rise of nuclear physics in the USSR the enthusiastic pursuit of military and peaceful nuclear programs through the Chernobyl disaster and the collapse of the Soviet Union and the ongoing self proclaimed renaissance of nuclear power in Russia in the 21st century At the height of their power the Soviets commanded 39 000 nuclear warheads yet claimed to be servants of the peaceful atom which they also pursued avidly This book examines both military and peaceful Soviet and post Soviet nuclear programs for the long duration before the war during the Cold War and in Russia to the present whilst also grappling with the political and ideological importance of nuclear technologies the associated economic goals the social and environmental costs and the cultural embrace of nuclear power Nuclear Russia probes the juncture of history of

science and technology political and cultural history and environmental history It considers the atom in Russian society as a reflection of Leninist technological utopianism Cold War imperatives scientific hubris public acceptance and a state desire to conquer nature Furthermore the book examines the vital and perhaps unexpected significance of ethnicity and gender in nuclear history by looking at how Kazakhs and Nenets lost their homelands and their health in Russia in the wake of nuclear testing as well as the surprising sexualization of the taming of the female atom in the Russian Miss Atom contests that commenced in the 21st century

From Despotism to Democracy Torbjörn Tännsjö, 2023-09-14 This book is about how best to respond to existential global threats posed by war and global heating The stakes have become existential A strong claim in the book is that we need a world state to save humanity The book sheds new light on why this is so The present author has long advocated global democracy A strong argument against global democracy has been however that no state has ever been established without the resort to violence In this book the author bites the bullet and advocates a route to global democracy that passes through a phase where a global state is established in the form of global despotism First despotism then democracy But as the author insists and the reader will find this is at most something we can hope for We may fail The moral importance of failure is thoroughly discussed The book explored the following topics The tragedy of the commons is presented as the best explanation of why we do so little to obviate the causes behind climate change A world government presents a way out of the tragedy of the commons Standard arguments against a world state are examined The question of whether it matters if humanity goes extinct is taken seriously What if the attempt to establish a world state fails The book is written by a philosopher but the intended audience is broad It has a place in courses in political philosophy but it is possible for anyone who wants to do so to dig deeper into the questions should be able to read it And regardless of whether you who read the book are a scholar or a layperson there is no way for you to avoid its topic Global existential issues concern all of us regardless of profession or nationality

Critical Masses and Critical Choices Kerry G. Herron, Hank C. Jenkins-Smith, 2010-11-23 Critical Masses and Critical Choices examines American attitudes on issues of national and international security Based on over 13 000 in depth interviews conducted over a ten year period Kerry Herron and Hank Jenkins Smith have created a unique and rich set of data providing insights into public opinion on nuclear deterrence terrorism and other security issues from the end of the Cold War to the present day Their goal is to shed light not only on changes in public opinion about a range of security related policy issues but also to gauge the depth of the public s actual understanding of these matters Prior to this study the predominant view held that the American people were incapable of articulate and consistent thought on complex political subjects This book overturns that notion and demonstrates the sometimes surprisingly cogent positions held by ordinary members of the public on intricate national issues The book s solid data based on long term studies combined with crisp writing and often startling conclusions will appeal to a wide range of readers scholars journalists and policy makers Critical Masses and Critical Choices is the definitive account of the change in

public perceptions on security threats and reactive strategies from the early 1990s to the post 9 11 period This broad and highly original study will prove an indispensable tool for policy makers and scholars alike

Seeking a Port in the WMD Storm Barry R. Schneider, 2005 Like a ship running from a hurricane at sea the United States Government is struggling to reach a safe port and shelter from a threatening WMD storm In an era where some adversaries are perhaps on the cusp of achieving the capabilities to destroy forward deployed American military forces with nuclear weapons e g in a future conflict with North Korea or to kill thousands of Americans in our cities with aerosolized biological weapons e g if Al Qaeda were to achieve the capability the United States and its allies are racing to create effective chemical biological radiological and nuclear CBRN countermeasures Serious gaps remain however and extreme vulnerabilities persist even a decade after Secretary Les Aspin announced the beginning of the Department of Defense DoD Counterproliferation Initiative CPI Much has been done since the CPI was launched in 1993 but much still must be accomplished before the United States can confidently either deter all adversaries from CBRN attacks or at least effectively neutralize any such attacks by a combination of effective counterforce targeting active defenses passive defenses or the ability to recover through superb consequence management actions

Progress in International Law Miller, Rebecca M. Bratspies, 2008-06-30 Progress in International Law is a comprehensive accounting of international law for our times Forty leading international law theorists analyze the most significant current issues in international law and their critical assessments draw diverse conclusions about the current state and future prospects of international law The material is grouped under the headings The History and Theory of International Law The Sources of International Law and Their Application in the United States International Actors International Jurisdiction and International Jurisprudence The Use of Force and the World's Peace and The Challenge of Protecting the Environment and Human Rights The book draws its inspiration from a similar survey undertaken in 1932 by Harvard Law Professor and PCIJ Judge Manley O Hudson In his book Progress in International Organization Hudson sought to demonstrate that what he perceived as an emerging international infrastructure and as moves toward the rule of law in international affairs were sure signs of human progress towards peace and cooperation Progress in International Law critically engages with that claim as a normative matter and at the same time presents the evidence by which a judgment about our own progress towards peace and cooperation might be judged

Politics and the Bomb Sara Z. Kutchesfahani, 2013-09-05 Epistemic communities represent networks of knowledge based experts that help articulate cause and effect relationships of complex problems define the self interests of a state or formulate specific policies for state decision makers However the role of these scientists and knowledgeable professionals in nuclear policy formulation is poorly understood Thoroughly documented and making excellent use of source material *Politics and the Bomb* provides refreshingly new empirical evidence and theoretical analysis of the importance of scientists and experts behind the creation of new non proliferation agreements Simply not another book on nuclear proliferation Sara Z Kutchesfahani explores the differences in

the emergence composition and influence mechanisms of the epistemic communities behind the nuclear non proliferation policy formulation in Brazilian Argentine Agency for Accounting and Control of Nuclear Materials ABACC and the Nunn Lugar Cooperative Threat Reduction CTR Program In doing so she eloquently demonstrates how the role of these non proliferation experts lead to the possibility of creating more effective non proliferation policies in the future and hints at the need to sustain non proliferation epistemic communities in all countries that can provide input to the global proliferation problem until it is solved
