Automated Theory Formation in Pure Mathematics Simon Colton, 2012-12-06 In recent years Artificial Intelligence researchers have largely focused their efforts on solving specific problems with less emphasis on the big picture automating large scale tasks which require human level intelligence to undertake The subject of this book automated theory formation in mathematics is such a large scale task Automated theory formation requires the invention of new concepts the calculating of examples the making of conjectures and the proving of theorems This book representing four years of PhD work by Dr Simon Colton demonstrates how theory formation can be automated Building on over 20 years of research into constructing an automated mathematician carried out in Professor Alan Bundy s mathematical reasoning group in Edinburgh Dr Colton has implemented the HR system as a solution to the problem of forming theories by computer HR uses various pieces of

mathematical software including automated theorem provers model generators and databases to build a theory from the bare minimum of information the axioms of a domain The main application of this work has been mathematical discovery and HR has had many successes In particular it has invented 20 new types of number of sufficient interest to be accepted into the Encyclopaedia of Integer Sequences a repository of over 60 000 sequences contributed by many human mathematicians

Machine Learning In Pure Mathematics And Theoretical Physics Yang-hui He,2023-06-21 The juxtaposition of machine learning and pure mathematics and theoretical physics may first appear as contradictory in terms The rigours of proofs and derivations in the latter seem to reside in a different world from the randomness of data and statistics in the former Yet an often under appreciated component of mathematical discovery typically not presented in a final draft is experimentation both with ideas and with mathematical data Think of the teenage Gauss who conjectured the Prime Number Theorem by plotting the prime counting function many decades before complex analysis was formalized to offer a proof Can modern technology in part mimic Gauss s intuition The past five years saw an explosion of activity in using AI to assist the human mind in uncovering new mathematics finding patterns accelerating computations and raising conjectures via the machine learning of pure noiseless data The aim of this book a first of its kind is to collect research and survey articles from experts in this emerging dialogue between theoretical mathematics and machine learning It does not dwell on the well known multitude of mathematical techniques in deep learning but focuses on the reverse relationship how machine learning helps with mathematics Taking a panoramic approach the topics range from combinatorics to number theory and from geometry to quantum field theory and string theory Aimed at PhD students as well as seasoned researchers each self contained chapter offers a glimpse of an exciting future of this symbiosis *Perspectives In Mathematical Science Ii: Pure Mathematics* N S

Narasimha Sastry,Mohan Delampady,B Rajeev,T S S R K Rao,2009-07-01 This book presents a collection of invited articles by distinguished Mathematicians on the occasion of the Platinum Jubilee Celebrations of the Indian Statistical Institute during the year 2007 These articles provide a current perspective of different areas of research emphasizing the major challenging issues Given the very significant record of the Institute in research in the areas of Statistics Probability and Mathematics distinguished authors have very admirably responded to the invitation Some of the articles are written keeping students and potential new entrants to an area of mathematics in mind This volume is thus very unique and gives a perspective of several important aspects of mathematics *Catalogue of the Books and Tracts on Pure Mathematics in the Central Library*
