Ron Amundson, 2005-03-14 In this book Ron Amundson examines two hundred years of scientific views on the evolution  
development relationship from the perspective of evolutionary developmental biology evo devo This perspective challenges  
several popular views about the history of evolutionary thought by claiming that many earlier authors had made history come  
out right for the Evolutionary Synthesis The book starts with a revised history of nineteenth century evolutionary thought It  
then investigates how development became irrelevant with the Evolutionary Synthesis It concludes with an examination of  
the contrasts that persist between mainstream evolutionary theory and evo devo This book will appeal to students and

professionals in the philosophy and history of science and biology      **The History & Theory of Vitalism** Hans Driesch, 1914      **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1983

**Reconceiving Experience** John T. Kearns, 1996-09-12 Kearns investigates representation and intentional activity to determine how experience contributes to propositional thought and belief and how experience is based on neural states and events This speech act theory shows using language to be intentional purposive activity which cannot be explained computationally or causally Learning language makes propositional thinking possible and provides conceptual structure to experience The account of language and its acquisition sheds light on further issues such as reference and proper names the difference between syllogistic and modern logic and the paradoxes of self reference As for experience the nonrelational analysis of representing explains our awareness of the world which doesn't give us access to the world and our access which isn't provided by awareness Reconceiving Experience presents a new framework for understanding language thought and experience and for carrying out research      What is the Human Being? Patrick R. Frierson, 2013-02-11 Philosophers anthropologists and biologists have long puzzled over the question of human nature It is also a question that Kant thought about deeply and returned to in many of his writings In this lucid and wide ranging introduction to Kant's philosophy of human nature which is essential for understanding his thought as a whole Patrick R Frierson assesses Kant's theories and examines his critics He begins by explaining how Kant articulates three ways of addressing the question what is the human being the transcendental the empirical and the pragmatic He then considers some of the great theorists of human nature who wrestle with Kant's views such as Hegel Marx Darwin Nietzsche and Freud contemporary thinkers such as E O Wilson and Daniel Dennett who have sought biological explanations of human nature Thomas Kuhn Michel Foucault and Clifford Geertz who emphasize the diversity of human beings in different times and places and existentialist philosophers such as Sartre and Heidegger He argues that whilst these approaches challenge and enrich Kant's views in significant ways all suffer from serious weaknesses that Kant's anthropology can address Taking a core insight of Kant's that human beings are fundamentally free but finite he argues that it is the existentialists particularly Sartre who are the most direct heirs of his transcendental anthropology The final part of the book is an extremely helpful overview of the work of contemporary philosophers particularly Christine Korsgaard and Jürgen Habermas Patrick R Frierson explains how these philosophers engage with questions of naturalism historicism and existentialism while developing Kantian conceptions of the human being Including chapter summaries and annotated further reading What is the Human Being is an outstanding introduction to some fundamental aspects of Kant's thought and a judicious assessment of leading theories of human nature It is essential reading for all students of Kant and the philosophy of human nature as well as those in related disciplines such as anthropology politics and sociology      The Rhetorical Turn Herbert W. Simons, 2011-02-15 We have only recently started to challenge the notion that serious inquiry can be free of rhetoric that it can rely exclusively on hard fact and cold logic in support of its

claims Increasingly scholars are shifting their attention from methods of proof to the heuristic methods of debate and discussion the art of rhetoric to examine how scholarly discourse is shaped by tropes and figures by the naming and framing of issues and by the need to adapt arguments to ends audiences and circumstances Herbert W Simons and the contributors to this important collection of essays provide impressive evidence that the new movement referred to as the rhetorical turn offers a rigorous way to look within and across the disciplines The Rhetorical Turn moves from biology to politics via excursions into the rhetorics of psychoanalysis decision science and conversational analysis Topics explored include how rhetorical invention guides scientific invention how rhetoric assists political judgment and how it integrates varying approaches to meta theory Concluding with four philosophical essays this volume of case studies demonstrates how the inventive and persuasive dimensions of scholarly discourse point the way to forms of argument appropriate to our postmodern age

*A Guide for the Godless* Andrew Kernohan, 2008-02      *The Problem of Knowledge* Ernst Cassirer, 1950-01-01 Cassirer employs his remarkable gift of lucidity to explain the major ideas and intellectual issues that emerged in the course of nineteenth century scientific and historical thinking The translators have done an excellent job in reproducing his clarity in English There is no better place for an intelligent reader to find out with a minimum of technical language what was really happening during the great intellectual movement between the age of Newton and our own New York Times Publisher description

**God, Science, and Self** Nauman Faizi, 2021-08-15 Muhammad Iqbal d 1938 was one of the most influential modernist Islamic thinkers of the early twentieth century His work as a poet politician philosopher and public intellectual was widely recognized in his lifetime and plays a major role in contemporary conversations about Islam modernity and tradition *God Science, and Self* examines the patterns of reasoning at work in Iqbal's philosophic magnum opus arguably the most significant text of modernist Islamic philosophy *The Reconstruction of Religious Thought in Islam* Since its initial publication in 1934 *The Reconstruction* has left scholars in a quandary its themes appear eclectic and its arguments contradictory and philosophically perplexing In this groundbreaking study Nauman Faizi argues that the keys to demystifying the contradictions of *The Reconstruction* are two competing epistemologies at play within the work Iqbal takes knowledge to be descriptive essential foundational and binary but he also takes knowledge to be performative contextual probabilistic and vague Faizi demonstrates how these approaches to knowledge shape Iqbal's claims about personhood God scripture philosophy and science *God Science, and Self* offers an original approach to interpreting Islamic thought as it crafts relationships between scriptural texts philosophic thought and scientific claims for modern Muslim subjects

**Criticism and Commitment** E.J. Echeverria, 2022-01-10      **Basic Structures of Reality** Colin McGinn, 2011-12-09 In *Basic Structures of Reality* Colin McGinn deals with questions of metaphysics epistemology and philosophy of mind from the vantage point of physics Combining general philosophy with physics he covers such topics as the definition of matter the nature of space motion gravity electromagnetic fields the character of physical knowledge and consciousness and meaning

Throughout McGinn maintains an historical perspective and seeks to determine how much we really know of the world described by physics He defends a version of structuralism the thesis that our knowledge is partial and merely abstract leaving a large epistemological gap at the center of physics McGinn then connects this element of mystery to parallel mysteries in relation to the mind Consciousness emerges as just one more mystery of physics A theory of matter and space is developed according to which the impenetrability of matter is explained as the deletion of volumes of space McGinn proposes a philosophy of science that distinguishes physics from both psychology and biology explores the ontology of energy and considers the relevance of physics to seemingly remote fields such as the theory of meaning In the form of a series of aphorisms the author presents a metaphysical system that takes laws of nature as fundamental With its broad scope and deep study of the fundamental questions at the heart of philosophy of physics this book is not intended primarily for specialists but for the general philosophical reader interested in how physics and philosophy intersect **Bio-social Issues**
