*Rift Zones of the World Ocean* Aleksandr Pavlovich Vinogradov, Gleb Borisovich Udintsev, 1975      Anomalous Magnetic Field of the World Ocean Alexander M. Gorodnitsky, 1994-10-12 This book investigates the anomalous magnetic field of the ocean and its connection with geological structure tectonic evolution of the oceanic lithosphere and magnetic properties of different rock types in the oceanic crust The book describes new instruments and techniques of gradient magnetic measurements with three sensors as well as the new technique of processing and interpreting hydromagnetic data on the basis of adoptive filtration and reparametrization The text provides unique data of geomagnetic surveys carried out by Russian research vessels in different regions of the World Ocean including submersible apparatus and ingenious theoretical and experimental technology of the magnetic modeling and investigations of the nature of magnetic anomalies The results of systems analysis of geochemical content and composition during the mid oceanic ridge basalt are presented

**Metalliferous Sediments of the World Ocean** Evgeny G. Gurvich, 2006-01-16 Dramatic advances in understanding global tectonics have been made in the last half century and the information and specific data acquired on the floor of the World Ocean by the scientific community probably has exceeded that available in all previous time With the benefit of new technology and advanced concepts in the earth sciences extensive exploration of the deep seabed became possible and has been carried out in many parts of the world Many features have been recognized and data recorded that are vital for understanding the fundamental processes that shape the earth's surface and control the habitable environment The data collected to date on the ocean floor and its physical environment greatly exceeds our understanding and appreciation of their fundamental importance in the earth sciences and our ability to apply this knowledge effectively in improving our way of life With his extensive scientific knowledge and unique experience from many cruises in association with scientists throughout the world Dr Evgeny Gurvich has made an outstanding contribution in acquiring basic data on hydrothermal and sedimentation processes in the ocean as well as in the synthesis of data and concepts available from cruise reports and an extensive literature

**The Morphostructure of the Atlantic Ocean Floor** V.M. Litvin, 2013-06-29 The study of the topography and structure of the ocean floor is one of the most important stages in ascertaining the geological structure and history of development of the Earth's oceanic crust This in its turn provides a means for purposeful scientifically substantiated prospecting exploration and development of the mineral resources of the ocean The Atlantic Ocean has been geologically and geophysically studied to a great extent and many years of investigating its floor have revealed the laws governing the structure of the major forms of its submarine relief e.g. the

continental shelf the continental slope the transition zones the ocean bed and the Mid Oceanic Ridge The basic features of the Earth's oceanic crust structure anomalous geophysical fields and the thickness and structure of its sedimentary cover have also been studied Based on the investigations of the Atlantic Ocean floor and its surrounding continents the presently prevalent concept of new global tectonics has appeared A great number of works devoted to the results of geomorphological geological and geophysical studies of the Atlantic Ocean floor have appeared In the U S S R such summarizing works as The Geomorphology of the Atlantic Ocean Floor 34 Types of Bottom Sediments of the Atlantic Ocean 24 The Geology of the Atlantic Ocean 38 and somewhat earlier Geophysical Studies of the Earth's Crust Structure in the Atlantic Ocean 13 have been published
