Rigorous Global Search Continuous Problems:

Rigorous Global Search: Continuous Problems R. Baker Kearfott, 2013-03-09 This work grew out of several years of research graduate seminars and talks on the subject It was motivated by a desire to make the technology accessible to those who most needed it or could most use it It is meant to be a self contained introduction a reference for the techniques and a guide to the literature for the underlying theory It contains pointers to fertile areas for future research It also serves as introductory documentation for a Fortran 90 software package for nonlinear systems and global optimization The subject of the monograph is deterministic automatically verified or rigorous methods In such methods directed rounding and computational fix point theory are combined with exhaustive search branch and bound techniques Completion of such an algorithm with a list of solutions constitutes a rigorous mathematical proof that all of the solutions within the original search region are within the output list The monograph is appropriate as an introduction to research and technology in the area as a desk reference or as a graduate level course reference Knowledge of calculus linear algebra and elementary numerical analysis is assumed

Modeling, Design, and Simulation of Systems with Uncertainties Andreas Rauh, Ekaterina Auer, 2011-06-06 To describe the true behavior of most real world systems with sufficient accuracy engineers have to overcome difficulties arising from their lack of knowledge about certain parts of a process or from the impossibility of characterizing it with absolute certainty Depending on the application at hand uncertainties in modeling and measurements can be represented in different ways For example bounded uncertainties can be described by intervals affine forms or general polynomial enclosures such as Taylor models whereas stochastic uncertainties

can be characterized in the form of a distribution described for example by the mean value the standard deviation and higher order moments The goal of this Special Volume on Modeling Design and Simulation of Systems with Uncertainties is to cover modern methods for dealing with the challenges presented by imprecise or unavailable information All contributions tackle the topic from the point of view of control state and parameter estimation optimization and simulation Thematically this volume can be divided into two parts In the first we present works highlighting the theoretic background and current research on algorithmic approaches in the field of uncertainty handling together with their reliable software implementation The second part is concerned with real life application scenarios from various areas including but not limited to mechatronics robotics and biomedical engineering

Developments in Reliable Computing Tibor Csendes, 2013-04-17 The SCAN conference the International Symposium on Scientific Computing Computer Arithmetic and Validated Numerics takes place biannually under the joint auspices of GAMM Gesellschaft für Angewandte Mathematik und Mechanik and IMACS International Association for Mathematics and Computers in Simulation SCAN 98 attracted more than 100 participants from 21 countries all over the world During the four days from September 22 to 25 nine highlighted plenary lectures and over 70 contributed talks were given These figures indicate a large participation which was partly caused by the attraction of the organizing country Hungary but also the effective support system have contributed to the success The conference was substantially supported by the Hungarian Research Fund OTKA GAMM the National Technology Development Board OMFB and by the József Attila University Due to this funding it was possible to subsidize the participation of over 20 scientists mainly from Eastern European countries It is important that the possibly first participation of 6 young researchers was made possible due to the obtained support The number of East European participants was relatively high These results are especially valuable since in contrast to the usual 2 years period the present meeting was organized just one year after the last SCAN xx conference

Markót,Tibor Csendes,Eckard Specht,Leocadio G. Casado,Inmaculada García,2007-05-31 In one sense the problem of finding the densest packing of congruent circles in a square is easy to understand But on closer inspection this problem reveals itself to be an interesting challenge of discrete and computational geometry with all its surprising structural forms and regularities This book summarizes results achieved in solving the circle packing problem over the past few years providing the reader with a comprehensive view of both theoretical and computational achievements Typically illustrations of problem solutions are shown elegantly displaying the results obtained Beyond the theoretically challenging character of the problem the solution methods developed in the book also have many practical applications Since the codes can be worked with directly they will enable the reader to improve on them and solve problem instances that still remain challenging or to use them as a starting point for solving related application problems The Palgrave Handbook of Operations Research Saïd Salhi,John

Distributed Decision Making and Control Rolf Johansson, Anders Rantzer, 2011-10-26 Distributed Decision Making and Control is a mathematical treatment of relevant problems in distributed control decision and multiagent systems The research reported was prompted by the recent rapid development in large scale networked and embedded systems and communications One of the main reasons for the growing complexity in such systems is the dynamics introduced by computation and communication delays Reliability predictability and efficient utilization of processing power and network resources are central issues and the new theory and design methods presented here are needed to analyze and optimize the complex interactions that arise between controllers plants and networks The text also helps to meet requirements arising from industrial practice for a more systematic approach to the design of distributed control structures and corresponding information interfaces Theory for coordination of many different control units is closely related to economics and game theory network uses being dictated by congestion based pricing of a given pathway The text extends existing methods which represent pricing mechanisms as Lagrange multipliers to distributed optimization in a dynamic setting In Distributed Decision Making and Control the main theme is distributed decision making and control with contributions to a general theory and methodology for control of complex engineering systems in engineering economics and logistics This includes scalable methods and tools for modeling analysis and control synthesis as well as reliable implementations using networked embedded systems Academic researchers and graduate students in control science system theory and mathematical economics and logistics will find much to interest them in this collection first presented orally by the contributors during a sequence of workshops organized in Spring 2010 by the Lund Center for Control of Complex Engineering Systems a Linnaeus Center at Lund University Sweden

Steiner Minimal Trees Dietmar Cieslik,2013-03-09 The problem of Shortest Connectivity which is discussed here has a long and convoluted history Many scientists from many fields as well as laymen have stepped on its stage Usually the problem is known as Steiner s Problem and it can be described more precisely in the following way Given a finite set of points in a metric space search for a network that connects these points with the shortest possible length This shortest network must be a tree and is called a Steiner

Minimal Tree SMT It may contain vertices different from the points which are to be connected Such points are called Steiner points Steiner's Problem seems disarmingly simple but it is rich with possibilities and difficulties even in the simplest case the Euclidean plane This is one of the reasons that an enormous volume of literature has been published starting in the seventeenth century and continuing until today The difficulty is that we look for the shortest network overall Minimum spanning networks have been well studied and solved completely in the case where only the given points must be connected The novelty of Steiner's Problem is that new points the Steiner points may be introduced so that an interconnecting network of all these points will be shorter This also shows that it is impossible to solve the problem with combinatorial and geometric methods alone

Generalized Convexity, Generalized Monotonicity: Recent Results Jean-Pierre Crouzeix, Juan Enrique Martinez Legaz, Michel Volle, 2013-12-01 A function is convex if its epigraph is convex This geometrical structure has very strong implications in terms of continuity and differentiability Separation theorems lead to optimality conditions and duality for convex problems A function is quasiconvex if its lower level sets are convex Here again the geometrical structure of the level sets implies some continuity and differentiability properties for quasiconvex functions Optimality conditions and duality can be derived for optimization problems involving such functions as well Over a period of about fifty years quasiconvex and other generalized convex functions have been considered in a variety of fields including economics management science engineering probability and applied sciences in accordance with the need of particular applications During the last twenty five years an increase of research activities in this field has been witnessed More recently generalized monotonicity of maps has been studied It relates to generalized convexity of functions as monotonicity relates to convexity Generalized monotonicity plays a role in variational inequality problems complementarity problems and more generally in equilibrium problems

Nonsmooth/Nonconvex Mechanics David Yang Gao, Raymond W. Ogden, Georgios E. Stavroulakis, 2013-12-01 Nonsmooth and nonconvex models arise in several important applications of mechanics and engineering The interest in this field is growing from both mathematicians and engineers The study of numerous industrial applications including contact phenomena in statics and dynamics or delamination effects in composites require the consideration of nonsmoothness and nonconvexity The mathematical topics discussed in this book include variational and hemivariational inequalities duality complementarity variational principles sensitivity analysis eigenvalue and resonance problems and minimax problems Applications are considered in the following areas among others nonsmooth statics and dynamics stability of quasi static evolution processes friction problems adhesive contact and debonding inverse problems pseudoelastic modeling of phase transitions chaotic behavior in nonlinear beams and nonholonomic mechanical systems This volume contains 22 chapters written by various leading researchers and presents a cohesive and authoritative overview of recent results and applications in the area of nonsmooth and nonconvex mechanics Audience Faculty graduate students and researchers in applied mathematics optimization control and engineering

Scientific Computing, Validated Numerics,

Interval Methods Walter Krämer, Jürgen Wolff von Gudenberg, 2013-04-17 Scan 2000 the GAMM IMACS International Symposium on Scientific Computing Computer Arithmetic and Validated Numerics and Interval 2000 the International Conference on Interval Methods in Science and Engineering were jointly held in Karlsruhe September 19 22 2000 The joint conference continued the series of 7 previous Scan symposia under the joint sponsorship of GAMM and IMACS These conferences have traditionally covered the numerical and algorithmic aspects of scientific computing with a strong emphasis on validation and verification of computed results as well as on arithmetic programming and algorithmic tools for this purpose The conference further continued the series of 4 former Interval conferences focusing on interval methods and their application in science and engineering The objectives are to propagate current applications and research as well as to promote a greater understanding and increased awareness of the subject matters The symposium was held in Karlsruhe the European cradle of interval arithmetic and self validating numerics and attracted 193 researchers from 33 countries 12 invited and 153 contributed talks were given But not only the quantity was overwhelming we were deeply impressed by the emerging maturity of our discipline There were many talks discussing a wide variety of serious applications stretching all parts of mathematical modelling New efficient publicly available or even commercial tools were proposed or presented and also foundations of the theory of intervals and reliable computations were considerably strengthened Multilevel Optimization: Algorithms and Applications A. Migdalas, Panos M. Pardalos, Peter Värbrand, 2013-12-01 Researchers working with nonlinear programming often claim the word is non linear indicating that real applications require nonlinear modeling The same is true for other areas such as multi objective programming there are always several goals in a real application stochastic programming all data is uncertain and therefore stochastic models should be used and so forth In this spirit we claim The word is multilevel In many decision processes there is a hierarchy of decision makers and decisions are made at different levels in this hierarchy One way to handle such hierarchies is to focus on one level and include other levels behaviors as assumptions Multilevel programming is the research area that focuses on the whole hierarchy structure In terms of modeling the constraint domain associated with a multilevel programming problem is implicitly determined by a series of optimization problems which must be solved in a predetermined sequence If only two levels are considered we have one leader associated with the upper level and one follower associated with the lower level
