Sustainable Construction Sandy Halliday, 2008-01-14 It has taken a very long time for sustainable development to be recognised as a justified restraint on inappropriate development and a primary driver of improving quality of life for all For designers clients and project managers this means we have to create healthy buildings and places which support communities enhance biodiversity and contribute to reversing unsustainable trends in pollution and resource consumption It is a very positive agenda This groundbreaking book will help all building design management and cost professionals to understand sustainable design and provide the technical skills needed to implement the most up to date concepts Based on a hugely successful series of workshops for professionals in construction the book covers the history of ideas materials measurement both cost and benchmarking performance environmental services and the building design and delivery process through to post occupancy evaluation It covers individual buildings and the urban scale Sustainable Construction is a master class in how to achieve practical affordable replicable sustainable design It has something new and often surprising in it for everybody in the construction industry For the Architect and Engineer it gives chapter and verse to the basic design issues at all scales and through the whole of the plan of work For Quantity Surveyors and cost professionals it challenges current conventions with researched case study evidence For clients and project managers it outlines the drivers and the justification for a sustainable approach and outlines the legislative framework and it gives guidance on procurement and project and site management issues For contractors and developers it contains a wealth of case study material rooted in practical experience and economic reality For teachers and students it will bust myths liberate thinking and inform design

Urban Environmentalism Peter Brand, Michael Thomas, 2013-02-01 A critical examination of urban policies and management practices used to make cities sustainable With an international perspective the book describes urban environmental agendas and how they arose in the context of globalization urban economic restructuring and the need to make cities competitive It argues that the environment became an integral part of city development policy turning attention not only to physical and ecological issues but also to improving the economic performance of cities and the lives of citizens The authors also go beyond the technical issues to explore the political importance of urban environmentalism using case studies to illustrate both its international scope and place specific characteristics which are inexorably influencing city development throughout the world In connecting the concept to its political effects the book raises issues such as local democracy equality and social regulation all of which are increasingly concerning academics professionals environmentalists

and city authorities alike Human Rights and the Environment Lyuba Zarsky,2012-06-25 The impact of environmental damage on human rights civil political or welfare and labour rights is becoming ever more widely appreciated and has direct bearing on the behaviour of companies and their norms of conduct In this volume contributors draw on the tools and insights of a range of disciplines including law anthropology economics geography and social science to analyze the issues and show how new standards that protect rights and liberties can be established **The Fragility of the 'Failed State' Paradigm** Neyire Akpinarli,2010 The absence of effective government one of the most important issues in current international law became prominent with the failed state concept at the beginning of the 1990s Public international law however lacked sufficient legal means to deal with the phenomenon Neither attempts at state reconstruction in countries such as Afghanistan and Somalia on the legal basis of Chapter VII of the UN Charter nor economic liberalisation have addressed fundamental social and economic problems This work investigates the weaknesses of the failed state paradigm as a long term solution for international peace and security arguing that the solution to the absence of effective government can be found only in an economic and social approach and a true universalisation of international law *Ecotourism, NGOs and Development* Jim Butcher,2007-03-12 Ecotourism has emerged over the last twenty years not just as a market niche but also as a strategy for combining development with conservation in the developing world Ecotourism NGOs and Development considers the basis for advocacy and argues that it is premised upon a very limited and limiting view of the potential for development Jim Butcher examines the advocacy of tourism as sustainable development in a range of NGOs and within the general literature The research reveals that in spite of the plethora of critical commentaries on the operation of ecotourism projects there is generally an uncritical take on the ideological basis of the projects This book offers a timely critique of key assumptions underlying ecotourism s status as sustainable development arguing that ecotourism as development strategy ties the fate of some of the poorest people on the planet to localized environmental imperatives *Understanding World Order and Structural Change* H. Abrahamsson,2015-12-22 Hans Abrahamsson assesses the current world order and structural change within an historical framework He analyzes the interaction of Pax American and the Bretton Woods system in the postwar period and its impact specifically on the development of Southern Africa The author also proposed an analytical model and a methodological framework for the study of the international political economy and its global and local implications Finally he addresses the circumstances behind the current opportunity for global change and the social forces and political action required in order to seize it **The Precautionary Principle in Biodiversity Conservation and Natural Resource Management** Rosie Cooney,2004 The precautionary principle or precautionary approach is now widely accepted in environmental law and policy at international and increasingly national level However the principle remains highly controversial its meaning contested its acceptance and implementation inconsistent across sectors and contexts and its impacts unclear This paper aims to inform and assist IUCN and its members in developing greater shared understanding of

the meaning and implementation of the principle in the context of biodiversity conservation and natural resource management respecting priorities of both conservation and sustainable development It examines the meaning of the precautionary principle and its incorporation into biodiversity and resource management law and policy and discusses a series of issues raised by its implementation in this sector for biodiversity conservation and for livelihoods and poverty alleviation

Institutions and Environmental Change Oran R. Young,Leslie A. King,Heike Schroeder,2008-08-22 This overview of recent research on how institutions matter in tackling environmental problems reports the findings and policy implications of a decade long international research project Studies show that institutions play a role both in causing and in addressing problems arising from human environment interactions But the nature of this role is complex and not easily described This book presents an overview of recent research on how institutions matter in efforts to tackle such environmental problems as the loss of biological diversity the degradation of forests and the overarching issue of climate change Using the tools of the new institutionalism in the social sciences the book treats institutions as sets of rights rules and decision making procedures Individual chapters present research findings and examine policy implications regarding questions of causality performance and institutional design as well as the themes of institutional fit or misfit interplay and scale Institutions and Environmental Change is the product of a decade long international research project on the Institutional Dimensions of Global Environmental Change IDGEC carried out under the auspices of the International Human Dimensions Programme The book s policy insights demonstrate that research on institutions can provide the basis for practical advice on effective ways to deal with the most pressing environmental problems of our times Contributors Frank Biermann Carl Folke Victor Galaz Thomas Gehring Joyeeta Gupta Thomas Hahn Leslie A King Ronald B Mitchell Sebastian Oberth r Per Olsson Heike Schroeder Uno Svedin Simon Tay Arild Underdal Oran R Young
