Riparian Landscapes:

Riparian Landscapes George Patrick Malanson, 1993-05-27 Riparian Landscapes examines the ecological systems of streamside and floodplain areas from the perspective of landscape ecology The specific spatial pattern of riparian vegetation is seen as a result of and a control on the ecological geomorphological and hydrological processes that operate along rivers Riparian structures are controlled by the spatial dynamics of channels flooding and soil moisture These dynamics are part of integrated cascades of water sediment nutrients and carbon to which animal and plant species respond in ways that illuminate community structure and competition The role of the riparian zone in controlling species distribution and abundance is discussed Intelligent management of these valuable ecological resources is highlighted The potential for linking hydrological geomorphological and ecological simulation models is also explored This book will be of interest to graduate and professional research workers in environmental science ecology and physical geography

Vegetation of Australian Riverine Landscapes Samantha Capon, Cassandra James, Michael Reid, 2016-04-01 Vegetation communities in Australia's riverine landscapes are ecologically economically and culturally significant They are also among the most threatened ecosystems on the continent and have been dramatically altered as a result of human activities and climate change Vegetation of Australian Riverine Landscapes brings together for the first time the results of the substantial amount of research that has been conducted over the last few decades into the biology ecology and management of these important plant communities in Australia The book is divided into four sections The first section provides context with respect to the spatial and temporal dimensions of riverine landscapes in Australia The second section examines key groups of riverine plants while the third section provides an overview of riverine vegetation in five major regions of Australia including patterns significant threats and management The final section explores critical issues associated with the conservation and management of riverine plants and vegetation including water management salinity fire and restoration Vegetation of Australian Riverine Landscapes highlights the incredible diversity and dynamic nature of riverine vegetation across Australia and will be an excellent reference for researchers academics and environmental consultants

Ecology of Cities and Towns Mark J. McDonnell, Amy K. Hahs, Jürgen H. Breuste, 2009-06-25 The unprecedented growth of cities and towns around the world coupled with the unknown effects of global change has created an urgent need to increase ecological understanding of human settlements in order to develop inhabitable sustainable cities and towns in the future Although there is a wealth of knowledge regarding the understanding of human organisation and behaviour there is comparably little information available regarding the ecology of cities and towns This book brings together leading scientists landscape designers and planners from developed and developing countries around the world to explore how urban ecological research has been undertaken to date what has been learnt where there are gaps in knowledge and what the future challenges and opportunities are

Where Land and Water Meet Nancy Langston, 2009-11-23 Water and land interrelate in surprising and ambiguous ways and riparian zones where land and water meet have effects far outside their boundaries Using the Malheur Basin in southeastern Oregon as a case study this intriguing and nuanced book explores the ways people have envisioned boundaries

between water and land the ways they have altered these places and the often unintended results The Malheur Basin once home to the largest cattle empires in the world experienced unintended widespread environmental degradation in the late nineteenth and early twentieth centuries After establishment in 1908 of Malheur National Wildlife Refuge as a protected breeding ground for migratory birds and its expansion in the 1930s and 1940s the area experienced equally extreme intended modifications aimed at restoring riparian habitat Refuge managers ditched wetlands channelized rivers applied Agent Orange and rotenone to waterways killed beaver and cut down willows Where Land and Water Meet examines the reasoning behind and effects of these interventions gleaned lessons from their successes and failures Although remote and specific the Malheur Basin has myriad ecological and political connections to much larger places This detailed look at one tangled history of riparian restoration shows how through appreciation of the complexity of environmental and social influences on land use and through effective handling of conflict people can learn to practice a style of pragmatic adaptive resource management that avoids rigid adherence to single agendas and fosters improved relationships with the land

Plant Nutrition for Sustainable Food Production and Environment Tadao Ando,Kounosuke Fujita,Tadahiko Mae,Hideaki Matsumoto,Satoshi Mori,Jiro Sekiya,2012-12-06 In the history of the International Plant Nutrition Colloquium from its first meeting in 1954 this meeting the 13th Colloquium is the first to be held in Asia and will be the last in the 20th century The 20th century has seen huge changes in the number and activities of mankind Our population has increased from around 1.7 billion to more than 5.8 billion and technological innovations have completely altered our way of living As a consequence of such rapid change we are facing many problems including changes in our environment of a global scale But while food shortage has been a serious concern to mankind throughout our history serious food shortages in the 20th century have been confined to limited times and areas As Lester Brown discusses in this volume farmers have increased food production heroically on demand We the plant nutritionists should be proud of our support to the world's farmers which has helped them make their achievement possible During the 20th century the science of plant nutrition also has achieved great progress as described by Jack Loneragan it became established as a discipline firmly based in science defined the chemical elements supporting plant growth and has contributed to improvements in plant production and environmental quality as readers will find in many contributions in this volume
