The Rise of the Luftwaffe, 1918-1940

Herbert Mason, 2016-11-08 The campaign in Poland proved the Luftwaffe to be the Wehrmacht's loudest trumpet. The rest of the world was stunned at the overrunning of sixty thousand miles of courageously defended terrain in only twenty six days. In the winter of 1918 Germany's conquerors set about rendering the Reich forever incapable of waging war. The existing German Air Service of nearly 15 000 planes was to be scrapped; the treaty of Versailles would ensure that no military aircraft would ever be flown in Germany again. But less than a generation later Europe shook before the threat of the Luftwaffe, believed to be the most powerful air force in the world. The Rise of the Luftwaffe tells how it happened. Denied warplane factories and flying schools in their homeland, the Germans built them in Russia and it was there that they trained an elite pilot corps. At home state sponsored gliding schemes gave a new generation of pilots their first taste of the air and clandestine factories ostensibly making perambulators or washing machines turned out warplanes. As confidence grew and the actual restrictions on German aviation eased so a new dimension was added to the bluff. Germany's re-occupation of the Rhineland was carried out under cover of planes lacking guns and ammunition; the Luftwaffe's apparent capability was exaggerated by the use of stripped down versions of fighters in speed record attempts. Now instead of concealing the existence of their air power from the rest of Europe the Germans were concealing its limitations. Herbert Molloy Mason charts every step of the subterfuge and ingenuity by which the transformation was brought about. He describes the pioneering of new developments such as the Stuka dive bomber and the proving of this secretly trained and created air force first in the Spanish Civil War and later against Poland and France. At the same time he explodes some of the myths of German technical and organizational superiority, meddling by Hitler, bickering between designers and bureaucrats and ineptitude by the morphine addicted Goering. Cost the Luftwaffe a war winning strategic bomber force and jet fighters even before World War II began. Praise for Herbert Molloy Mason. Worth taking seriously. Earl F Ziemke. Herbert Molloy Mason 1927 2013 was a noted writer of military history and wrote sixteen books including *The Lafayette Escadrille* and *To Kill Hitler*. He lived in San Antonio Texas with his wife who was an artist. *Military Deception and Strategic Surprise!* John Gooch, Amos Perlmutter, 2012-11-12 Published in 2004 *Military Deception and Strategic Surprise* is a valuable contribution to the field of Military and Strategic Studies. *The Beginnings of Strategic Air Power* Neville Jones, 2012-11-12 Using official records the author traces the origins and early development of strategic bombing and examines its organs in the operations and staff planning of the First World War. The experiences of the First World War should have been a valuable legacy to those who devised the counter offensive strategy in the years between the war. Unfortunately the lessons learnt were soon forgotten and many of the operational and technical problems which the planners had begun to tackle in 1918 were not even seen to exist by the Air Staff during the 1920s and early 1930s. **Flying Man** Richard Byers, 2016-11-17 Hugo Junkers 1859 1935 was a

German engineer and aircraft designer generally credited as the pioneer of all metal airplanes His company Junkers Flugzeug und Motorenwerke AG more commonly referred to simply as Junkers became a major German aircraft manufacturer based in Dessau From humble beginnings producing boilers and radiators by World War II the company was producing some of the most successful Luftwaffe planes including the Ju 88 the primary bomber of the German air force Hugo Junkers himself however was a socialist pacifist who saw aviation as a way to unify the world Soon after the Nazi party came to power in 1933 Junkers was forced to surrender his patents found his holdings seized by the state and was placed under house arrest He died in 1935 a tortured genius exiled from his life's work but perhaps fortunately spared from seeing his inventions destructively unleashed across Europe No biography of Junkers has been published to date Author Richard Byers now fills that void with this compelling narrative of a man and his machines Flying Man is a contribution not only to the history of aviation but also adds to our understanding of the consolidation of power in Germany's march toward World War II

Strange Victory Ernest R. May, 2025-06-25 Ernest R May's Strange Victory presents a dramatic narrative and reinterpretation of Germany's six week campaign that swept the Wehrmacht to Paris in spring 1940 Before the Nazis killed him for his work in the French Resistance the great historian Marc Bloch wrote a famous short book Strange Defeat about the treatment of his nation at the hands of an enemy the French had believed they could easily dispose of In Strange Victory the distinguished American historian Ernest R May asks the opposite question How was it that Hitler and his generals managed this swift conquest considering that France and its allies were superior in every measurable dimension and considering the Germans own skepticism about their chances Strange Victory is a riveting narrative of those six crucial weeks in the spring of 1940 weaving together the decisions made by the high commands with the welter of confused responses from exhausted and ill informed or ill advised officers in the field Why did Hitler want to turn against France at just this moment and why were his poor judgment and inadequate intelligence about the Allies nonetheless correct Why didn't France take the offensive when it might have led to victory What explains France's failure to detect and respond to Germany's attack plan It is May's contention that in the future nations might suffer strange defeats of their own if they do not learn from their predecessors mistakes in judgment

The Race for Hitler's X-Planes John Christopher, 2012-10-01 During World War 2 Hitler's engineers had pioneered an incredible array of futuristic secret weapons from the Me 262 the first operational jet fighter to the deadly V2 inter continental ballistic missile With the Third Reich shattered and lying in ruins in the summer of 1945 the Allies launched a frantic race to grab what they saw as the justifiable spoils of war The Americans and Russians in particular were anxious to secure not only the aircraft and the research and production facilities but also the key German scientists and engineers This Nazi technology would define the balance of power in the phoney peace of the Cold War era launching an arms race that shaped our modern world for decades to come But what of Britain's role in this supermarket sweep The Race for Hitler's X Planes tells the untold story of the British mission to Germany

Military Air Power in Europe Preparing for War Norman Ridley, 2023-01-24 The First World War had seen the mechanization of warfare Battle fronts had become immobilized in the grip of machine guns and heavy artillery leading to slaughter on an unprecedented scale The end of the war saw exhausted governments extricating themselves from the carnage but some leaders were concerned that sooner or later another major war would

follow As France s Marshal Foch put it the Treaty of Versailles was only a twenty year truce The overriding concern was to find ways in future of avoiding the kind of static battle fronts that had consumed so many in such futile efforts Military aviation was seen as the one great innovation that had the potential to do this by revolutionizing warfare It would not only augment the effectiveness of ground forces in a tactical role but it also had the means of reaching out strategically beyond the battlefronts to strike at the enemy s trade supplies communications and industrial production All through the war military aviation had been firmly under the control of army commanders but there was soon a fierce debate over the way it should develop The development of an air doctrine within each of the major European powers was fraught with difficulty as the nascent air arms struggled with varying degrees of success to free themselves from army control to find a new independent identity This book examines the way in which these air arms competed for prominence within the military structures of six major European nations Germany Britain France Soviet Union Poland and Italy with different resources ambitions and philosophies in the years from the beginning of aviation right up to the start of the Second World War **Military Aircraft, 1919-1945** Justin D. Murphy, Matthew A. McNiece, 2008-12-08 An in depth history of the time when airpower became the great equalizer changing military strategy forever and bringing once safe targets in reach Military Aircraft 1919 1945 An Illustrated History of Their Impact covers a crucial era in modern warfare technology Ranging from the development of airpower doctrines in the aftermath of World War I to the aircraft and missions that put those doctrines into action during World War II it provides an expert summing up of the decades when the use of aircraft in battle came of age In chapters covering both the history of air power and specific types of aircraft fighters bombers reconnaissance and auxiliary planes Military Aircraft 1919 1945 introduces key theorists and designers describes important changes in technology and production and recreates spectacular episodes from Pearl Harbor to the London Blitz to the Enola Gay Readers will see the dramatic impact of the first generation of modern military aircraft on land and sea They will also see how the expansion of war to the skies brought economic opportunity to some home fronts and looming terror and devastation to others

Enduring the Whirlwind Gregory Liedtke, 2016-09-19 Despite the best efforts of a number of historians many aspects of the ferocious struggle between Nazi Germany and the Soviet Union during the Second World War remain obscure or shrouded in myth One of the most persistent of these is the notion largely created by many former members of its own officer corps in the immediate postwar period that the German Army was a paragon of military professionalism and operational proficiency whose defeat on the Eastern Front was solely attributable to the amateurish meddling of a crazed former Corporal and the overwhelming numerical superiority of the Red Army A key pillar upon which the argument of German numerical weakness vis vis the Red Army has been constructed is the assertion that Germany was simply incapable of providing its army with the necessary quantities of men and equipment needed to replace its losses In consequence as their losses outstripped the availability of replacements German field formations became progressively weaker until they were

incapable of securing their objectives or eventually of holding back the swelling might of the Red Army This work seeks to address the notion of German numerical weakness in terms of Germany's ability to replace its losses and regenerate its military strength and assess just how accurate this argument was during the crucial first half of the Russo German War June 1941 June 1943 Employing a host of primary documents and secondary literature it traces the development and many challenges of the German Army from the prewar period until the invasion of the Soviet Union in June 1941 It continues on to chart the first two years of the struggle between Germany and the Soviet Union with a particular emphasis upon the scale of German personnel and equipment losses and how well these were replaced It also includes extensive examinations into the host of mitigating factors that both dictated the course of Germany's campaign in the East and its replacement and regeneration capabilities In contrast to most accounts of the conflict this study finds that numerical weakness being the primary factor in the defeat of the Ostheer specifically as it relates to the strength and condition of the German units involved has been overemphasized and frequently exaggerated In fact Germany was actually able to regenerate its forces to a remarkable degree with a steady flow of fresh men and equipment and German field divisions on the Eastern Front were usually far stronger than the accepted narratives of the war would have one believe **Luftwaffe** Williamson

Murray,2021-11-21 This book first published in 1985 is an in depth analysis of the Luftwaffe in the Second World War using previously untapped German archives and newly released Ultra intelligence records It looks at the Luftwaffe within the context of the overall political decision making process within the Third Reich It is especially valuable for its careful study of industrial production and pilot losses in the conduct of operations **Catalog of Copyright Entries. of Congress. Copyright Office,1975 *The Sources of Military Doctrine* Barry Posen,1984 Barry R Posen explores how military doctrine takes shape and the role it plays in grand strategy that collection of military economic and political means and ends with which a state attempts to achieve security Posen isolates three crucial elements of a given strategic doctrine its offensive defensive or deterrent characteristics its integration of military resources with political aims and the degree of military or operational innovation it contains He then examines these components of doctrine from the perspectives of organization theory and balance of power theory taking into account the influence of technology and geography Looking at interwar France Britain and Germany Posen challenges each theory to explain the German Blitzkrieg the British air defense system and the French Army's defensive doctrine often associated with the Maginot Line This rigorous comparative study in which the balance of power theory emerges as the more useful not only allows us to discover important implications for the study of national strategy today but also serves to sharpen our understanding of the origins of World War II *Air*

University Review ,1976 **Aces of the Legion Condor** Robert Forsyth,2012-01-20 For Germany the Spanish Civil War proved a perfect testing ground for new technologies and tactics During the war some 19 000 German volunteers formed an aviation group called the Legion Condor in support of the fascists Originally flying He 51s they were soon upgraded to 109s

These fighters proved dominant in the Spanish skies and many members of the legion scored five or more kills during the fighting

Why the Axis Lost John Arquilla, 2020-02-27

The factors leading to the defeat of the Axis Powers in World War II have been debated for decades. One prevalent view is that overwhelming Allied superiority in materials and manpower doomed the Axis. Another holds that key strategic and tactical blunders lost the war from Hitler halting his panzers outside Dunkirk, allowing more than 300,000 trapped Allied soldiers to escape, to Admiral Yamamoto falling into the trap set by the U.S. Navy at Midway. Providing a fresh perspective on the war, this study challenges both views and offers an alternative explanation: the Germans, Japanese, and Italians made poor design choices in ships, planes, tanks, and information security before and during the war that forced them to fight with weapons and systems that were too soon outmatched by the Allies. The unprecedented arms race of World War II posed a fundamental design challenge the Axis powers sometimes met but never mastered.
