The Rise of Mammals Matthew Rake,2015-08-01 Team up with Ackerley the Acanthostega to travel back 66 million years to the Tertiary and Quaternary periods of prehistoric Earth when mammals came to dominate the planet Many of them are now extinct but not the most powerful of all humans Discover the facts fossils and fun science of behind the intriguing mammals of this time period including killer pigs the largest land mammal ever and the earliest humans The fourth part of the exciting story of life on Earth unfolds through amazing lifelike illustrations and fascinating diagrams all narrated by a friendly prehistoric guide [The Rise of the Mammals](#) Michael J. Benton,1991

The Rise of Marine Mammals Annalisa Berta,2017-10-02 Setting the stage rocks fossils and evolution The oldest marine mammals whales and sea cows Later diverging whales Neoceti Aquatic carnivores pinnipeds and a bear like carnivoran Crown sirenians and their desmostylian relatives Aquatic sloths and recent occupants of the sea sea otters and polar bears Diversity changes through time the influence of climate change and humans *The Rise of Placental Mammals* Kenneth D. Rose,2005-03-29 Publisher description [Summary of Steve Brusatte's The Rise and Reign of the Mammals](#) Everest Media,2022-07-22T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The world the scaly creatures lived in was changing The swamp forest was being invaded by the sea The small creatures were one of hundreds of animal species that had called the swamp forest home 2 The story of mammal evolution is the result of two lines of evidence Paleontologists have two key lines of evidence to prove that around 325 million years ago there were small scale covered critters that lived in lush swamp forests that were frequently inundated by rising seas 3 The second type of evidence is all around us It doesn't require any special skill to find and it's DNA which we and all other organisms carry inside of our cells DNA is the blueprint that makes us what we are the genetic code that controls what our bodies look like our physiology and growth and how we produce future generations 4 The Pennsylvanian period was the first time that the continents of Gondwana and Laurasia came together It was also the first time that trees grew to be large enough to be called forests and the first time that many mosquitoes and other small animals evolved

Evolution - The Rise of the Mammals Matthew Rake,2015-04 In Evolution our little friend Ackerley the Acanthostega takes you on a journey through time to explore the development of life on our wonderful planet from the earliest organisms of 3.6 billion years ago through to the arrival of primates 60 million years ago to modern humans who have been around for less than 200 000 years With CGI illustrations fun diagrams and loads of humour these four books answer simply and honestly the important and fascinating questions about life on Earth and how it evolved

Rise of the Dragon Henry Gee,2001-11 Over the past decade fossil finds from China have stunned the world grabbing headlines and changing perceptions with a wealth of new discoveries

Many of these finds were first announced to English speakers in the journal *Nature*. Rise of the Dragon gathers together sixteen of these original reports some augmented with commentaries originally published in *Nature's* News and Views section. Perhaps the best known of these new Chinese fossils are the famous feathered dinosaurs from Liaoning Province which may help end one of the most intense debates in paleontology: whether birds evolved from dinosaurs. But other finds have been just as spectacular such as the minutely preserved to the cellular level animal embryos of the 670 million year old Duoshantuo phosphorites or the world's oldest known fish from the Chengjiang formation in southwestern Yunnan Province. *Rise of the Dragon* makes descriptions and detailed discussions of these important finds available in one convenient volume for paleontologists and serious fossil fans. The Rise of Birds Sankar Chatterjee, 2015-04-01 The most comprehensive account of the origin of ancient and modern birds: the living dinosaurs. A small set of fossilized bones discovered almost thirty years ago led paleontologist Sankar Chatterjee on a lifelong quest to understand their place in our understanding of the history of life. They were clearly the bones of something unusual: a bird-like creature that lived long long ago in the age of dinosaurs. He called it Protoavis and the animal that owned these bones quickly became a contender for the title of oldest known bird. In 1997 Chatterjee published his findings in the first edition of *The Rise of Birds*. Since then Chatterjee and his colleagues have searched the world for more transitional bird fossils. And they have found them. This second edition of *The Rise of Birds* brings together a treasure trove of fossils that tell us far more about the evolution of birds.

than we once dreamed possible With no blind allegiance to what he once thought he knew Chatterjee devours the new evidence and lays out the most compelling version of the birth and evolution of the avian form ever attempted He takes us from Texas to Spain China Mongolia Madagascar Australia Antarctica and Argentina He shows how in the Cretaceous Pompeii of China he was able to reconstruct the origin and evolution of flight of early birds from the feathered dinosaurs that lay among thousands of other amazing fossils Chatterjee takes us to where long hidden bird fossils dwell His compelling occasionally controversial revelations accompanied by spectacular illustrations are a must read for anyone with a serious interest in the evolution of the feathered dinosaurs from vertebrate paleontologists and ornithologists to naturalists and birders
