Intelligent Ubiquitous Computing ,2009 Security and Privacy in the Age of Ubiquitous Computing Ryoichi Sasaki,Eiji Okamoto,Hiroshi Yoshiura,2010-06-03 Even in the age of ubiquitous computing the importance of the Internet will not change and we still need to solve conventional security issues In

addition we need to deal with new issues such as security in the P2P environment privacy issues in the use of smart cards and RFID systems Security and Privacy in the Age of Ubiquitous Computing addresses these issues and more by exploring a wide scope of topics The volume presents a selection of papers from the proceedings of the 20th IFIP International Information Security Conference held from May 30 to June 1 2005 in Chiba Japan Topics covered include cryptography applications authentication privacy and anonymity DRM and content security computer forensics Internet and web security security in sensor networks intrusion detection commercial and industrial security authorization and access control information warfare and critical protection infrastructure These papers represent the most current research in information security including research funded in part by DARPA and the National Science Foundation Security in Pervasive

Damien Sauveron,2007-04-25 This volume constitutes the refereed proceedings of the First IFIP TC6 WG 8.8 WG 11.2 International Workshop on Information Security Theory and Practices Smart Cards Mobile and Ubiquitous Computing Systems WISTP 2007 held in Heraklion Crete Greece in May 2007 The 20 revised full papers are organized in topical sections on mobility hardware and cryptography privacy cryptography schemes smart cards and small devices System Support for Security and Privacy in Pervasive Computing Wolfgang Apolinarski,2016-06-06 One of the main goals of the pervasive computing domain is to provide the user with task support for everyday tasks This task support should be realized by pervasive applications that are seamlessly integrated in the environment for example embedded into devices such as everyday objects To automate configuration context information is shared between these devices The shared context can contain private information that should not be made public System support which helps to develop pervasive applications should therefore contain mechanisms that utilize security and privacy methods when handling context Pervasive applications can then use these mechanisms and create pervasive environments while preserving the user's privacy Here we show how context information can be processed and queried in a privacy preserving manner By securing the authenticity and integrity of context information and creating a secure context distribution algorithm we show how pervasive applications can use and share context securely Second we introduce secure role assignment as a mechanism for environment adaptation which is built on context information Similar to context roles need to be protected and secured during distribution Additionally we add system support for secure roles which can be used for role based access control by pervasive applications Third we create a secure key exchange mechanism that can be used to secure the communication between users and devices This is an essential step that needs to be performed before any private information can be shared among them Fourth we introduce a framework for the automatic generation of a privacy policy This framework creates an individual privacy policy that can be used to share context between users devices or applications while preserving the user's will with regard to context privacy

Detmar W. Straub,Seymour E. Goodman,Richard Baskerville,2008 This volume in the Advances in Management Information Systems series covers the managerial landscape of information security **Privacy in Mobile and Pervasive Computing**

Marc Langheinrich,Florian Schaub,2022-05-31 It is easy to imagine that a future populated with an ever increasing number of mobile and pervasive devices that record our minute goings and doings will significantly expand the amount of information that will be collected stored processed and shared about us by both corporations and governments The vast majority of this

data is likely to benefit us greatly making our lives more convenient efficient and safer through custom tailored and context aware services that anticipate what we need where we need it and when we need it But beneath all this convenience efficiency and safety lurks the risk of losing control and awareness of what is known about us in the many different contexts of our lives Eventually we may find ourselves in a situation where something we said or did will be misinterpreted and held against us even if the activities were perfectly innocuous at the time Even more concerning privacy implications rarely manifest as an explicit tangible harm Instead most privacy harms manifest as an absence of opportunity which may go unnoticed even though it may substantially impact our lives In this Synthesis Lecture we dissect and discuss the privacy implications of mobile and pervasive computing technology For this purpose we not only look at how mobile and pervasive computing technology affects our expectations of and ability to enjoy privacy but also look at what constitutes privacy in the first place and why we should care about maintaining it We describe key characteristics of mobile and pervasive computing technology and how those characteristics lead to privacy implications We discuss seven approaches that can help support end user privacy in the design of mobile and pervasive computing technologies and set forward six challenges that will need to be addressed by future research The prime target audience of this lecture are researchers and practitioners working in mobile and pervasive computing who want to better understand and account for the nuanced privacy implications of the technologies they are creating Those new to either mobile and pervasive computing or privacy may also benefit from reading this book to gain an overview and deeper understanding of this highly interdisciplinary and dynamic field
