The Concise Focal Encyclopedia of Photography Michael Peres, 2014-06-20 Defining photography is impossible Revealing it is another matter and that's what The Concise Focal Encyclopedia of Photography does with each turn of the page History The technical origins and evolution of photography are half of the story The other half consists of the ways that cultural forces have transformed photography into a constellation of practices more diverse than any other mode of representation Photographers can tell a more in depth story through a photo like Dorothea Lange's Migrant Mother than a journalist ever could with the written word alone Major themes and practitioners Over 25 entries many with supporting illustrations examine the figures trends and ideas that have contributed most heavily to the history and current state of photography Contemporary issues The issues influencing photography today are more complex than at any other time in its history Questions of ethics desire perception digitization and commercialization all vie for attention Hear what the experts

Face Value Alexander Todorov, 2017-05-30 The scientific story of first impressions and why the snap character judgments we make from faces are irresistible but usually incorrect We make up our minds about others after seeing their faces for a fraction of a second and these snap judgments predict all kinds of important decisions For example politicians who simply look more competent are more likely to win elections Yet the character judgments we make from faces are as inaccurate as they are irresistible in most situations we would guess more accurately if we ignored faces So why do we put so much stock in these widely shared impressions What is their purpose if they are completely unreliable In this book Alexander Todorov one of the world's leading researchers on the subject answers these questions as he tells the story of the modern science of first impressions Drawing on psychology cognitive science neuroscience computer science and other fields this accessible and richly illustrated book describes cutting edge research and puts it in the context of the history of efforts to read personality from faces Todorov describes how we have evolved the ability to read basic social signals and momentary emotional states from faces using a network of brain regions dedicated to the processing of faces Yet contrary to the nineteenth century pseudoscience of physiognomy and even some of today's psychologists faces don't provide us a map to the personalities of others Rather the impressions we draw from faces reveal a map of our own biases and stereotypes A fascinating scientific account of first impressions Face Value explains why we pay so much attention to faces why they lead us astray and what our judgments actually tell us
