Reports from the committees Great Britain House of Commons,1851 The Descent of Man, and Selection in Relation to Sex Charles Darwin,1981 In the current resurgence of interest in the biological basis of animal behavior and social organization the ideas and questions pursued by Charles Darwin remain fresh and insightful This is especially true of The Descent of Man and Selection in Relation to Sex Darwin s second most important work This edition is a facsimile reprint of the first printing of the first edition 1871 not previously available in paperback The work is divided into two parts Part One marshals behavioral and morphological evidence to argue that humans evolved from other animals Darwin shoes that human mental and emotional capacities far from making human beings unique are evidence of an animal origin and evolutionary

development Part Two is an extended discussion of the differences between the sexes of many species and how they arose as a result of selection Here Darwin lays the foundation for much contemporary research by arguing that many characteristics of animals have evolved not in response to the selective pressures exerted by their physical and biological environment but rather to confer an advantage in sexual competition These two themes are drawn together in two final chapters on the role of sexual selection in humans In their Introduction Professors Bonner and May discuss the place of *The Descent* in its own time and relation to current work in biology and other disciplines

The Descent of Man, 1871 **The Descent of Man, and Selection in Relation to Sex - Vol. I.** Charles Darwin, 2013-05-31 Twelve years after the revolutionary publication of *On the Origin of Species* Charles Darwin finally turned his formidable scientific method to the most controversial creature of all man In the first volume of this groundbreaking work Darwin directly addresses three fundamental questions he had previously avoided whether man is descended from some pre-existing form the manner of his development and the value of the differences between the so-called races of man Drawing on extensive evidence from comparative anatomy embryology and the physical and mental traits shared with the lower animals Darwin forcefully argues that humans like all other species are the product of an unbroken evolutionary chain He examines how our intellectual and moral faculties often held up as proof of a divine and unique origin have in fact evolved through natural and social instincts This volume sets the stage for a comprehensive and often challenging examination of humanity's place in the natural world It is a defining text that cemented the idea of human evolution and remains essential reading for anyone seeking to understand the foundations of modern evolutionary thought
