A Secret History of Consciousness Gary Lachman,2003 For the last four centuries science has tried to account for everything in terms of atoms and molecules and the physical laws they adhere to Recently this effort was extended to try to include the inner world of human beings Gary Lachman argues that this view of consciousness is misguided and unfounded He points to another approach to the study and exploration of consciousness that erupted into public awareness in the late 1800s In this secret history of consciousness consciousness is seen not as a result of neurons and molecules but as responsible for them meaning is not imported from the outer world but rather creates it In this view consciousness is a living evolving presence whose development can be traced through different historical periods and which evolves along a path to a broader more expansive state What that consciousness may be like and how it may be achieved is a major concern of this book Lachman concentrates on the period since the late 1800s when Madame Blavatsky first brought the secret history out into the open As this history unfolds we encounter the ideas of many modern thinkers from esotericists like P D Ouspensky Rudolf Steiner and Colin Wilson to more mainstream philosophers like Henri Bergson William James Owen Barfield and the psychologist Andreas Mavromatis Two little known but important thinkers play a major role in his synthesis Jurij Moskvitin who showed how our consciousness relates to the mechanisms of perception and to the external world and Jean Gebser who presented perhaps the most impressive case for the evolution of consciousness An important contribution to the study of consciousness a must read Contents Foreword by Colin Wilson Introduction Consciousness Explained The Search for Cosmic Consciousness Esoteric Evolution The Archaeology of Consciousness Participatory Epistemology The Presence of Origin Last Words Playing for Time Selected Bibliography A marvelously exhilarating gallop through every important modern theory of consciousness from Steiner to Maslow from Bucke s cosmic consciousness to Gebser s integral consciousness Colin Wilson author of *The Outsider* and *Access to Inner Worlds* Opens up vast vistas of possibility suggesting that what we experience as the earth may in itself be inseparable from our state of mind and that the evolution of human consciousness may be as fundamental a process as our development through genetics A must read for those seeking an escape from our contemporary culture s cul de sac Daniel Pinchbeck author of *Breaking Open the Head* Thinking outside the box Lachman challenges many contemporary theories by reinserting a sense of the spiritual back into the discussion Profoundly erudite yet easy to read this book is a provocative mind stretcher Leonard Shlain author of *Art Physics Alphabet* versus the Goddess and *Sex Time Power*

book explores how our subjective realities may change during states of dream psychedelic experience meditation and trance Taking a broad view across a wide range of genres Inner Sound draws connections between shamanic art and music and the modern technoshamanism of psychedelic rock electronic dance music and electroacoustic music Going beyond the sonic into the visual the book also examines the role of altered states in film visual music VJ performances interactive video games and virtual reality applications Through the analysis of these examples Weinell uncovers common mechanisms and ultimately proposes a conceptual model for Altered States of Consciousness Simulations ASCSs This theoretical model describes how sound can be used to simulate various subjective states of consciousness from a first person perspective in an interactive context Throughout the book the ethical issues regarding altered states of consciousness in electronic music and audio visual media are also examined ultimately allowing the reader not only to consider the design of ASCSs but also the implications of their use for digital society     The to Z of Shamanism Graham Harvey, Robert J.
