## **Long Term Durability Of Structural Materials:**

*Long Term Durability of Structural Materials* P.J.M. Monteiro,K.P. Chong,J. Larsen-Basse,K. Komvopoulos,2001-08-29 Long Term Durability of Structural Materials features proceedings of the workshop held at Berkeley CA in October 2000 It brought together engineers and scientists who have received grants from the initiative NSF 98 42 to share their results on the study of long term durability of materials and structures The major objective was to develop new methods for accelerated short term laboratory or in situ tests which allow accurate reliable predictions of the long term performance of materials machines and structures To achieve this goal it was important to understand the fundamental nature of the deterioration and damage processes in materials and to develop innovative ways to model the behavior of these processes as they affect the life and long term performance of components machines and structures The researchers discussed their approach to include size effects in scaling up from laboratory specimens to actual structures Accelerated testing and durability modeling techniques developed were validated by comparing their results with performance under actual operating conditions The main mechanism of the deterioration discussed included environmental effects and or exposure to loads speeds and other operating conditions that are not fully anticipated in the original design A broad range of deterioration damage such as fatigue overload ultraviolet damage corrosion and wear was presented A broad range of materials of interest was also discussed including the full spectrum of construction materials metals ceramics polymers composites and coatings Emphasis was placed on scale dependence and history of fabrication on resulting mechanical behavior of materials *Coatings for High-Temperature Structural Materials* National Research Council,Division on Engineering and Physical Sciences,National Materials Advisory Board,Commission on Engineering and Technical Systems,Committee on Coatings for High-Temperature Structural Materials,1996-06-13 This book assesses the state of the art of coatings materials and processes for gas turbine blades and vanes determines potential applications of coatings in high temperature environments identifies needs for improved coatings in terms of performance enhancements design considerations and fabrication processes assesses durability of advanced coating systems in expected service environments and discusses the required inspection repair and maintenance methods The promising areas for research and development of materials and processes for improved coating systems and the approaches to increased coating standardization are identified with an emphasis on materials and processes with the potential for improved performance quality reproducibility or manufacturing cost reduction **PCM-Enhanced Building Components** Jan Kořny,2015-05-07 Presenting an overview of the use of Phase Change Materials PCMs within buildings this book discusses the performance of PCM enhanced building envelopes It reviews the most common PCMs suitable for building applications and discusses PCM encapsulation and packaging methods In addition to this it examines a range of PCM enhanced building products in the process of development as well as examples of whole building scale field demonstrations Further chapters discuss experimental and theoretical analyses including available software to determine
