Le Corbusier, the Dishonest Architect Malcolm Millais, 2018-01-23 This is not a book for architects but for all those that have suffered consciously and unconsciously from modern architecture and have wondered how it came about This was largely due to one man an architect called Le Corbusier For some he was a genius but the truth is he was a sham a fake a charlatan whose only gift was for self publicity He was the most influential architect of the second half of the twentieth century his influence overwhelmed the architectural profession on a global scale who swallowed his publicity whole and still hold him in awe For the rest of the world the mere mortals his influence was disastrous as traditional buildings were destroyed and replaced by featureless boxes of varying sizes imposing a dreariness hitherto unimagined As usual it was the poor who suffered most as they were herded into tower blocks These were often grouped into estates that ringed many towns and cities which then degenerated into high rise slums with all the well known attendant social problems This book exposes the myths that surround Le Corbusier detailing the endless failures of his proposals and his projects These were due to his profound dishonesty both as a person and as an architect His legacy was an architectural profession that believed and still believe they were designing buildings based on logic functionality and honesty whereas they were doing the opposite

Embodied Utopias Amy Bingaman, Lise Sanders, Rebecca Zorach, 2003-12-16 Utopia has become a dirty word in recent scholarship on modernism architecture urban planning and gender studies Many utopian designs now appear impractical manifesting an arrogant disregard for the lived experiences of the ordinary inhabitants who make daily use of global public and private spaces The essays in Embodied Utopias argue that the gendered body is the crux of the hopes and disappointments of

modern urban and suburban utopias of the Americas Europe and Asia They reassess utopian projects masculinist feminist colonialist progressive of the late nineteenth and early twentieth centuries they survey the dystopian landscapes of the present and they gesture at the potential for an embodied approach to the urban future to the changing spaces of cities and virtual landscapes

Le Corbusier's Venice Hospital Project Mahnaz Shah,2017-05-15 While Le Corbusier s urban projects are generally considered confrontational in their relationship to the traditional urban fabric his proposal for the Venice hospital project remained an exercise in preserving the medieval fabric of the city of Venice through a systemic replication of its urban tissue This book offers a detailed study of Le Corbusier s Venice hospital project as a plausible built

entity In addition it analyses it in the light of its supposed affinity with the medieval urban configuration of the city of Venice No formal attempt to date has been made to critically analyse the hospital project s design considerations in comparison to the medieval urban configuration of the city of Venice Using a range of methodologies including those from architectural theory and history using archival resources on site analysis and interviews with important resource persons this book is an interpretation of the conceptual basis for Le Corbusier understanding of the structural formulation of the city of Venice as mentioned in The Radiant City 1935 In doing so it deciphers the diagrammatic analysis of the city structure found in this work into a set of coherent design modules that were applied in the hospital project and that could become a point of further investigation Architects and other architecturally interested laypeople with an interest in Venice will find the book a valuable addition to their knowledge For architectural historians the book makes an important link between modernism and the historically grown Venice

Driverless Urban Futures AnnaLisa Meyboom,2018-12-07 Since the industrial revolution innovations in transportation technology have continued to re shape the spatial organization and temporal occupation of the built environment Today autonomous vehicles AVs also referred to as self driving cars represent the next disruptive innovation in mobility with particularly profound impacts for cities At a moment of the fast paced development of AVs by automaking companies around the world policymakers planners and designers need to anticipate and address the many questions concerning the impacts of this new technology on urbanism and society at large Conceived as a speculative atlas a roadmap to unknown territories this book presents a series of drawings and text that unpack the potential impacts of AVs on scales ranging from the metropolis to the street The work is both grounded in a study of the history of urban transportation and current trajectories of technological innovation and informed by an open ended attitude of future envisioning and design Through the drawings and essays Driverless Urban Futures invites readers into a debate of how our future infrastructure could benefit all members of the public and levels of society

The Publishers' Trade List Annual ,1974 **Big House Little City** Benedict Zucchi,2023-09-08 Shortlisted for the Architectural Book Awards 2024 Combining architectural and urban thinking in an unusual and engaging way this book presents an integrated approach to architectural theory and design Leon Battista Alberti s assertion in his famous Renaissance treatise that the city is like a big house and the house is in turn like a little city forms the springboard for a series of reflections on architecture s

relationship with urbanism and how their once intimate symbiosis unravelled by International Style Modernism can be recovered Explicit references to Alberti's house city phrase have been made by figures as diverse as the architects Louis Kahn Aldo Van Eyck Denys Lasdun and Niels Torp and novelist Italo Calvino But as the book shows thinking of buildings as little cities provides a new lens through which to reappraise the contributions of many other architects including Le Corbusier Frank Lloyd Wright Alvar Aalto Eliel Saarinen Bernard Rudofsky Hans Scharoun Leon Krier Fumihiko Maki Charles Correa and Team 10 In doing so the author identifies common themes that form an unexpected bridgehead between the urban and architectural approaches of Antiquity the Middle Ages Renaissance and 20th century The book explores buildings from across the globe including lesser known projects such as Wright's unbuilt house in Italy or Saarinen's master plan for Cranbrook Academy as well as more recent projects by Niels Torp Behnisch Architekten Sou Fujimoto Peter Barber and WOHA It concludes with practical case studies of residential health education and workplace projects from different countries fulsomely illustrated with many drawings and photographs These show how architectural design viewed through an urban lens provides a conceptual framework for breaking down the scale of large buildings and integrating them with their context And crucially these also show a very accessible way of explaining evolving designs to the intended users and eliciting their participation in the design process The book offers a compelling approach to the design of projects at all scales within an ecological perspective the sense that big and small cities and buildings must be approached holistically if we are to reverse the degradation and depletion of our habitat both natural and man made
