phenomenological insights from Brentano and Sartre but also drawing on recent work on consciousness by analytic philosophers this book defends the view that conscious states are reflexive and necessarily so i.e. that they have a built in implicit awareness of their own occurrence such that the subject of a conscious state has an immediate non objectual acquaintance with it As part of this investigation the book also explores the relationship between reflexivity and the phenomenal or what it is like dimension of conscious experience defending the innovative thesis that phenomenal character is constituted by the implicit self awareness built into every conscious state This account stands in marked contrast to most influential extant theories of phenomenal character including qualia theories according to which phenomenal character is a matter of having phenomenal sensations and representationalism according to which phenomenal character is constituted by

*Passion of Our Lord* William Tait (English Chaplain at Pau.), 1874      **The Nature of Order, Book One: The Phenomenon of Life** Christopher Alexander, 2020-03-30 Christopher Alexander's series of ground breaking books including *A Pattern Language* and *The Timeless Way of Building* have pointed to fundamental truths of the way we build revealing what gives life and beauty and true functionality to our buildings and towns. Now in *The Nature of Order* Alexander explores the properties of life itself highlighting a set of well defined structures present in all order and in all life from micro organisms and mountain ranges to good houses and vibrant communities. In *The Phenomenon of Life* the first volume in this four volume masterwork Alexander proposes a scientific view of the world in which all space matter has perceptible degrees of life and sets this understanding of order as an intellectual basis for a new architecture. With this view as a foundation we can ask precise questions about what must be done to create more life in our world whether in a room a humble doorknob a neighbourhood or even in a vast region. He introduces the concept of living structure basing it upon his theories of centers and of wholeness and defines the fifteen properties from which according to his observations all wholeness is built. Alexander argues that living structure is at once both personal and structural. Taken as a whole the four books create a sweeping new conception of the nature of things which is both objective and structural hence part of science and also personal in that it shows how and why things have the power to touch the human heart. A step has been taken through which these two domains the domain of geometrical structure and the feeling it creates kept separate during four centuries of scientific thought from 1600 to 2000 have finally been united.
