Computers in the Human Interaction Loop Alexander Waibel, Rainer Stiefelhausen, 2009-04-05 This book integrates a wide range of research topics related to and necessary for the development of proactive smart computers in the human interaction loop including the development of audio visual perceptual components for such environments the design implementation and analysis of novel proactive perceptive services supporting humans the development of software architectures ontologies and tools necessary for building such environments and services as well as approaches for the evaluation of such technologies and services The book is based on a major European Integrated Project CHLI Computers in the Human Interaction Loop and throws light on the paradigm shift in the area of HCI that rather than humans interactive directly with machines computers should observe and understand human interaction and support humans during their work and interaction in an implicit and proactive manner

Human-in-the-Loop Robot Control and Learning Luka Peternel, Jan Babič, Erhan Oztop, Tetsunari Inamura, Dingguo Zhang, 2020-01-22 In the past years there has been considerable effort to move robots from industrial environments to our daily lives where they can collaborate and interact with humans to improve our life quality One of the key challenges in this direction is to make a suitable robot control system that can adapt to humans and interactively learn from humans to facilitate the efficient and safe co existence of the two The applications of such robotic systems include service robotics and physical human robot collaboration assistive and rehabilitation robotics semi autonomous cars etc To achieve the goal of integrating robotic systems into these applications several important research directions must be explored One such direction is the study of skill transfer where a human operator's skilled executions are used to obtain an autonomous controller Another important direction is shared control where a robotic controller and humans control the same body tool mechanism car etc Shared control in turn invokes very rich research questions such as co adaptation between the human and the robot where the two agents can benefit from each other's skills or must adapt to each other's behavior to achieve effective cooperative task executions The aim of this Research Topic is to help bridge the gap between the state of the art and above mentioned goals through novel multidisciplinary approaches in human in the loop robot control and learning
