Posthuman Folklore Tok Thompson, 2019-09-25 Can a monkey own a selfie Can a chimp use habeas corpus to sue for freedom Can androids be citizens Increasingly such difficult questions have moved from the realm of science fiction into the realm of everyday life and scholars and laypeople alike are struggling to find ways to grasp new notions of personhood Posthuman Folklore is the first work of its kind both an overview of posthumanism as it applies to folklore studies and an investigation of vernacular posthumanisms the ways in which people are increasingly performing the posthuman Posthumanism calls for a close investigation of what is meant by the term human and a rethinking of this our most basic ontological category What exactly is human What exactly am I There are two main threads of posthumanism the first dealing with the increasingly slippery slope between human and animal and the second dealing with artificial intelligences and the growing cyborg quality of human culture This work deals with both these threads seeking to understand the cultural roles of this shifting notion of human by centering its investigation into the performances of everyday life From funerals for AIBOs to furies to ghost stories told by Alexa people are increasingly engaging with the posthuman in myriad everyday practices setting the stage for a wholesale rethinking of our humanity In Posthuman Folklore author Tok Thompson traces both the philosophies behind these shifts and the ways in which people increasingly are enacting such ideas to better understand the

posthuman experience of contemporary life *Practical Philosophy Of Ai-assistants, The: An Engineering-humanities Conversation* Suman Gupta, Peter H Tu, 2023-12-04 The Practical Philosophy of AI Assistants presents a formal conversation between an AI engineer Peter and a humanities researcher Suman. The book ensures that specialist concepts in AI research are made comprehensible to a humanities researcher while humanities theories can be easily grasped by an AI engineer. The authors establish ground rules to design an AI Assistant that is an AI system that could act as a personal friend, consultant, and confidante for every individual to be integrated into our daily lives. These rules apply to four large areas of AI development: recognition and identification, communication, explanation, and civility. In discussing these areas, this book provides an accessible account of the current state of AI research as well as adding nuance to the underpinning assumptions informing the relevant technologies, reflecting on their social implications. The broader ideological objective of The Practical Philosophy of AI Assistants is captured by the phrase practical philosophy, which expresses a commitment to bringing AI development to work towards a good life for all.

The Cambridge Companion to Darwin Michael Jonathan Sessions Hodge, Gregory Radick, 2003-05 The naturalist and geologist Charles Darwin (1809-82) ranks as one of the most influential scientific thinkers of all time. In the nineteenth century, his ideas about the history and diversity of life, including the evolutionary origin of humankind, contributed to major changes in the sciences, philosophy, social thought, and religious belief. This volume provides the reader with clear, lively, and balanced introductions to the most recent scholarship on Darwin and his intellectual legacies. A distinguished team of contributors examines Darwin's main scientific ideas and their development; Darwin's science in the context of its times; the influence of Darwinian thought in recent philosophical, social, and religious debate; and the importance of Darwinian thought for the future of naturalist philosophy. New readers will find this the most convenient and accessible guide to Darwin currently available. Advanced students and specialists will find a conspectus of recent developments in the interpretation of Darwin.

Restoring the Human Context to Literary and Performance Studies Howard Mancing, Jennifer Marston Williams, 2022-01-28 Restoring the Human Context to Literary and Performance Studies argues that much of contemporary literary theory is still predicated at least implicitly on outdated linguistic and psychological models such as post-structuralism, psychoanalysis, and behaviorism, which significantly contradict current dominant scientific views. By contrast, this monograph promotes an alternative paradigm for literary studies, namely Contextualism, and in so doing highlights the similarities and differences among the sometimes conflicting contemporary cognitive approaches to literature and performance, arguing not in favor of one over the other but for Contextualism as their common ground.

Interpreting Globalization Leszek Koczanowicz, Piotr Jakub Fereński, Joanna Panciuch, 2021-01-11 The main hypothesis of the volume is that globalization is a cultural phenomenon. Therefore, the book offers an explanation of how globalization emerged from cultural exchange between groups, nations, and religions. The articles in this volume register the thematically multi-dimensional and theoretically complex contribution of Polish research on globalization. Polish debates on

globalization as presented in this book on the one hand reflect international disputes and controversies and on the other hand address local issues As their crucial feature the articles in this volume exhibit a special sensitivity to historical and contemporary cultural contexts They do not approach globalization as an abstract process instead exploring it through the lens of clearly defined factors *Animal Rights* John M. Kistler, 2000-06-30 Introductions to each chapter explain the issues as well as the arguments that surround them and a general introduction to the volume thoroughly explains how to use the book Each entry contains the following information author title edition series title location of publisher name of publisher number of pages year of publication and International Standard Book Number Annotations include the most important information available to help the researcher including web sites that contain not only the full text of the book when available but also excerpts and articles or interviews by the author short quotations from the books and short descriptions and summaries of the books All the information provided allows students to locate exactly what they need while encouraging them to explore other issues and differing viewpoints *Reinventing Structuralism* Rodney B. Sangster, 2013-05-28 This monograph argues that the structuralist movement in linguistics was curtailed prematurely before its contribution to cognitive science could be fully realized Building upon Roman Jakobson's pioneering work on the nature of the linguistic sign a new and detailed appreciation of the role of sign relations in the ultimate structuring of consciousness is presented proving that the structural approach has as much to contribute today as any current cognitive theory This study takes the view that the structure which linguistic signs themselves evince should be treated as an organic property of mind in its own right as the device by which the ultimate differences in meaning in the human cognitive sphere are realized Adherence to this principle assumes not only that the linguistic sign must be fundamentally monosemic but also that the level of abstraction at which the relations between signs function must lie beyond the logical or rational level where polysemy is the rule The study demonstrates that while the conceptual relations or categories uncovered at such a higher order level of consciousness are of necessity highly abstract and hidden from normal awareness they are nevertheless neither ineffable nor devoid of content Rather the categories identified and defined in this study are shown to have verifiable correlates at the supra rational level where transpersonal rather than ego oriented psychology operates the level that Jung termed the collective unconscious It is here that we find corresponding properties in reports from altered states of consciousness in the structure of myths worldwide as well as in studies of the image making capacity of the human mind Ultimately when the structure of actual linguistic signs is treated as an ordered set of conceptual relations one necessarily arrives at the conclusion that the sign relations of different languages are anything but Whorfian but are all pointing to the same universal set of conceptual properties This set of properties is then shown to be able to account for the relations between signs in all areas of linguistic structure from the grammatical to the lexical and the syntactic The monograph goes on to provide a detailed account of the process of making reference of how speakers are able to contextualize the truly abstract conceptual relations inherent in the

structure of signs in their language to produce a potentially infinite variety of polysemous meanings in actual speech situations at whatever level of concreteness they choose and how the feedback from such acts of communication determines the evolutionary trajectory of a system of signs conceived as a living organism specifically as a neuronal structure inherent in the human brain operating as a fundamentally probabilistic or stochastic system **Encyclopedia of Pseudoscience**

Krippner,2011-10-14 Shamanism can be described as a group of techniques by which its practitioners enter the spirit world purportedly obtaining information that is used to help and to heal members of their social group Despite a resurgence of interest in shamanism and shamanic states of consciousness these phenomena are neither well defined nor sufficiently understood This multi disciplinary study draws on the fields of psychology philosophy and anthropology with the aim of demystifying shamanism The authors analyse conflicting perspectives regarding shamanism the epistemology of shamanic states of consciousness and the nature of the mental imagery encountered during these states **Touching for Knowing**

Yvette Hatwell,Arlette Streri,Edouard Gentaz,2003-09-09 The dominance of vision is so strong in sighted people that touch is sometimes considered as a minor perceptual modality However touch is a powerful tool which contributes significantly to our knowledge of space and objects Its intensive use by blind persons allows them to reach the same levels of knowledge and cognition as their sighted peers In this book specialized researchers present the recent state of knowledge about the cognitive functioning of touch After an analysis of the neurophysiology and neuropsychology of touch exploratory manual
