

HOW TO MAKE COFFEE

with a

MANUAL DRIPPER

Heat Up Water

Heat up water in a kettle. Water needs to be around 200-205 °F when starting to pour.

Measure Beans

Measure on a scale 30 grams of coffee for every 12 oz of water.

Grind Beans

Grind the coffee to a medium grind size. Some grinders have a "drip size" setting.

Prepare for Pouring

Line the dripper with a paper filter and pre-wet the filter.

Add Coffee Grounds

Add the ground coffee into the filter, and gently tap the dripper

Pour Over

Start pouring water over the grounds. Pour just enough to cover all the coffee, and give it a stir with a wooden spoon.

Allow coffee to bloom and release the trapped gas.

Let It Drip

Pour the rest of the water slowly, allowing it to slowly drip. Total dripping time should be around 1 minute up to 80 seconds.

Serve It

Pour in cups and enjoy hot.

The Optician Training Manual 2nd edition David S. McCleary, 2018-07-15. This must-have optical training system, whether you are an optometrist, ophthalmologist, or optical manager responsible for training opticians, or are an optician trying to better your skills. Training opticians, new and seasoned, is a daunting task. Are new opticians ready to hit the floor running? Are seasoned opticians remembering the principles that make a good pair of glasses great? These are the questions this book will answer in an easily implemented fashion. Not a text filled with equations and theory never used clinically. This book is written with how you actually practice in mind. Extensive use of short Focus Points help highlight important principles. Understanding of clinical relevance is a primary objective of this book, and as such, it aims to take you from ordinary to extraordinary in your ability to create and deliver excellence in your optical career. With this book, you will be able to analyze every part of a pair of glasses, pick the best frame for a patient's face, learn which lens options complement each other and which ones don't, be able to research contact lens parameter availability, understand symptoms of the most common eye diseases, and separate yourself from the average optician by addressing special circumstances many opticians may handle incorrectly. In addition to ophthalmic optics, you will learn techniques for improving sales and service to help you stand out in the mind of your patients. For example, making each patient a spokesperson for the practice, how to diffuse the dissatisfied patient, increasing your average dollar sale without being a salesperson, troubleshooting, and many more patient-centered skills necessary to keep your patients coming back again and again. This book is unlike others in that it emphasizes clinical relevancy, has extensive training on improving patient perception of quality and service, has forms for copying and using immediately to improve efficiency and patient care, and helps you formulate goals for both professional and personal achievement. Second edition includes discussion on digital lenses and lab knowledge for the non-lab optician.
