Innovations in Government

Sandford F. Borins, 2009-12-01 The Innovations in American Government Awards Program began in 1985 with a grant from the Ford Foundation to the Kennedy School of Government at Harvard to conduct a program of awards for innovations in state and local government. The foundation's objective was ambitious and in an era of government is the problem rhetoric determinedly proactive. It sought to counter declining public confidence in government by highlighting innovative and effective programs. Over twenty years later, research recognition and replication are the source of the program's continuing influence and its vitality. What is the future of government innovation? How can innovation enhance the quality of life for citizens and strengthen democratic governance? Innovations in Government: Research Recognition and Replication answers these questions by presenting a comprehensive approach to advancing the practice and study of innovation in government. The authors discuss new research on innovation, explore the impact of several programs that recognize innovation and consider challenges to the replication of innovations. Contributors include Eugene Bardach, University of California Berkeley; Robert Behn, Harvard University; John D. Donahue, Harvard University; Marta Ferreira Santos, Farah Center for Public Administration and Government, Fundação Getúlio Vargas; Archon Fung, Harvard University; Jean Hartley, University of Warwick; Steven Kelman, Harvard University; Gowher Rizvi, Ash Institute for Democratic Governance and Innovation, Harvard University; Peter Spink, Center for Public Administration and Government, Fundação Getúlio Vargas; and Jonathan Walters, Governing.

Applied Innovation: A Handbook Stephen A. Di Biase, Stephen A. Di Biase PhD, 2015-03-01 Applied Innovation: A Handbook outlines how a start-up CEO can take an innovation from concept to repeat sales, including everything from the strategic elements of what innovation is to business models and intellectual property to how one sets up an advisory board etc. This work focuses on offering a road map for building a company from the ground up but can be applied to existing firms as well. The premise is that anyone can learn and apply the concepts of innovation in any part of their business and personal life if they know what is required.

Sustainable Innovation in the Middle East and North Africa (MENA) Region Askri, Soumaya, Kweh, Qian Long, Chabani, Zakariya, 2025-07-09 Sustainable innovation in the Middle East and North Africa (MENA) region has gained momentum driven by environmental concerns, economic strategies, and investments in renewable energy and green technologies. Countries like the United Arab Emirates, Saudi Arabia, Morocco, and Egypt lead the way by implementing sustainability agendas, blending technological advancement with environmental stewardship. Further research may highlight how sustainable innovation in the MENA region addresses climate challenges and creates new economic opportunities, reshaping global perceptions of the region. Sustainable Innovation in the Middle East and North Africa (MENA) Region explores the connection between sustainability and innovation in the Middle East and North Africa (MENA) region. It provides real-world insights and solutions to achieve sustainable development goals. This book covers topics such as blockchain, digital technology, and solar cities and is a useful resource for business owners, government officials, and policymakers.

Handbook of Research Design in Mathematics and Science Education Anthony Edward Kelly, Richard A. Lesh, 2012-10-12 The Handbook of Research Design in Mathematics

and Science Education is based on results from an NSF supported project REC 9450510 aimed at clarifying the nature of principles that govern the effective use of emerging new research designs in mathematics and science education. A primary goal is to describe several of the most important types of research designs that have been pioneered recently by mathematics and science educators. These designs have distinctive characteristics when they are used in projects that focus on mathematics and science education and have proven to be especially productive for investigating the kinds of complex interacting and adapting systems that underlie the development of mathematics or science students and teachers or for the development, dissemination, and implementation of innovative programs of mathematics or science instruction. The volume emphasizes research designs that are intended to radically increase the relevance of research to practice, often by involving practitioners in the identification and formulation of the problems to be addressed or in other key roles in the research process. Examples of such research designs include teaching experiments, clinical interviews, analyses of videotapes, action research studies, ethnographic observations, software development studies, or curricula development studies, more generally, and computer modeling studies. This book's second goal is to begin discussions about the nature of appropriate and productive criteria for assessing and increasing the quality of research proposals, projects, or publications that are based on the preceding kind of research designs. A final objective is to describe such guidelines in forms that will be useful to graduate students and others who are novices to the fields of mathematics or science education research. The NSF supported project from which this book developed involved a series of mini-conferences in which leading researchers in mathematics and science education developed detailed specifications for the book and planned and revised chapters to be included. Chapters were also field tested and revised during a series of doctoral research seminars that were sponsored by the University of Wisconsin's OERI supported National Center for Improving Student Learning and Achievement in Mathematics and Science. In these seminars, computer-based videoconferencing and www-based discussion groups were used to create interactions in which authors of potential chapters served as guest discussion leaders, responding to questions and comments from doctoral students and faculty members representing more than a dozen leading research universities throughout the USA and abroad. A Web site with additional resource materials related to this book can be found at <http://www.soe.purdue.edu/smsc/leah>. This internet site includes directions for enrolling in seminars, participating in ongoing discussion groups, and submitting or downloading resources which range from videotapes and transcripts to assessment instruments or theory-based software to publications or data samples related to the research designs being discussed.

Making Collaboration Work Julia M. Wondolleck, Steven Lewis Yaffee, 2000-05. The authors explain the need for collaboration in the management of natural resources and cite successful partnerships doing so, including government agencies, community groups, businesses, and individuals across the USA.
