selected papers presented at the 6th International Conference on Recent Innovations in Computing ICRIC 2023 held on 26 27
October 2023 at the Central University of Jammu India and organized by the university s Department of Computer Science
and Information Technology The book is divided into two volumes and it includes the latest research in the areas of software

database and distributed computing and digital India Modernizing Crime Statistics National Academies of Sciences,
Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Committee on Law and
Justice,Committee on National Statistics,Panel on Modernizing the Nation's Crime Statistics,2016-06-30 To derive statistics
about crime to estimate its levels and trends assess its costs to and impacts on society and inform law enforcement
approaches to prevent it a conceptual framework for defining and thinking about crime is virtually a prerequisite Developing
and maintaining such a framework is no easy task because the mechanics of crime are ever evolving and shifting tied to
shifts and development in technology society and legislation Interest in understanding crime surged in the 1920s which
proved to be a pivotal decade for the collection of nationwide crime statistics Now established as a permanent agency the
Census Bureau commissioned the drafting of a manual for preparing crime statistics intended for use by the police
corrections departments and courts alike The new manual sought to solve a perennial problem by suggesting a standard
taxonomy of crime Shortly after the Census Bureau issued its manual the International Association of Chiefs of Police in
convention adopted a resolution to create a Committee on Uniform Crime Records to begin the process of describing what a
national system of data on crimes known to the police might look like The key distinction between the rigorous classification
proposed in this report and the classifications that have come before in U S crime statistics is that it is intended to partition
the entirety of behaviors that could be considered criminal offenses into mutually exclusive categories Modernizing Crime
Statistics Report 1 Defining and Classifying Crime assesses and makes recommendations for the development of a modern
set of crime measures in the United States and the best means for obtaining them This first report develops a new
classification of crime by weighing various perspectives on how crime should be defined and organized with the needs and
demands of the full array of crime data users and stakeholders **Computational Thinking: How computers think,
decide and learn, when human limits start and computers champ. Vol.1** Jorge Guerra Pires,2022-07-05 In 2013 I
wrote a book 1 At the time I wanted to explain neural networks in simple terms I had high school students at my mind I have
expressed my concerns that machine learning was dominating the world and people had no idea about it smartphones were
not popular in Brazil and started go gain attention as personal computers Deep learning started to gain momentum on 2012
and nowadays is kind of the rule At the time YouTube was bad pretty bad a must say I used to save the links to my videos as

so I could avoid passing through the main page Computational thinking is synonymous of algorithms I cannot think a single computational routine which is not an algorithm after all computers are stupid they need to be told what to do even when it is abstract e g machine learning What is computational think though Think like this a thought experiment Suppose you give your result from your model to someone Do you believe the person would be able to tell the difference between your solution from your algorithm and a human If not this is computational thinking It is a machine i e an algorithm a routine doing human thinking work As we are going to see based on Kasabov s work we may actually be able to send thinking loads to computers in the future Initially this book supposes to be called computational intelligence Nonetheless I thought we do not necessarily need intelligence to build models not in the sense to artificial intelligence or even human intelligence Furthermore as we shall learn from Daniel Kahneman and colleagues we can achieve nice models for decision making even with simple models when compared to humans imagine what we can do with machine learning cloud computing databases such as MongoDB and Firebase Possible public Web developers wanting to expand their horizon here I am being modest I feel any web coder should learn computational thinking as so they can add intelligence to their dummy apps People from computational intelligence waiting to learn new tricks Computer scientists for sure I would recommend to computational biologists and anyone interested in bioinformatics Applied mathematics and computational mathematician for sure Anyone that is opened to new ideas but has a minimum computer programming background Maybe medical doctors and biologists one of my PhD advisors was a surgeon with a PhD in mathematics thus we may have this profile in medicine and especially in biology External resources and tricks My GitHub profile Our sandbox I have used links to my LinkedIn profile to posts related to the discussions Feel free to start a conversation on LinkedIn or to connect Just comment on the posts and I will be noticed I have used several external links to articles online this is in addition to the classical academic reference standard With Special release of My selected essays from Medium on Computer programming Artificial Intelligence 1 Redes Neurais em termos simples como aprendemos pensamos e modelamos [https://www.academia.edu/18365339](https://www.academia.edu/18365339/Redes_Neurais_em_termos_simples_como_aprendemos_pensamos_e_modelamos)
