Making Manufacturing Cells Work Computer and Automated Systems Association of SME.,1992 Based on over ten years of hands on cell planning and installation worldwide this book analyzes FMC conceptual development implementation integration and future trends Chapters include the FMC Project Organization Macro Facility Planning Evaluating Alternative FMCs Selling FMC Concepts to Top Management Material Handling Robot Applications Quality Control Systems Conducting Detail Design Equipment Specification Vendor Selection and also Auditing Cell Performance Reorganizing the Factory Nancy Hyer,Urban Wemmerlov,2001-10-22 Winner of the 2003 Shingo Prize Reorganizing work processes into cells has helped many organizations streamline operations shorten lead times increase quality and lower costs Cellular manufacturing is a powerful concept that is simple to understand however its ultimate success depends on deciding where cells fit into your organization and then applying the know how to design implement and operate them Reorganizing the Factory presents a thoroughly researched and comprehensive life cycle approach to competing through cellular work organizations It takes you from the basic cell concept and its benefits through the process of justifying designing implementing operating and improving this new type of work organization in offices and on the factory floor The book discusses many important technical dimensions such as factory analysis cell design planning and control systems and principles for lead time and inventory reduction However unique to the literature it also covers in depth the numerous managerial issues that accompany organizing work into cells In most implementations performance measurement compensation education and training employee involvement and change management are critically important These issues are often overlooked in the planning process yet they can occupy more of the implementation time than do the technical aspects of cells Includes Why do cells improve lead time quality and cost Planning for cell implementation Justifying the move to cells strategically and economically Designing efficient manufacturing and office cells Selecting and training cell employees Compensation system for cell employees Performance and cost measurement Planning and control of materials and capacity Managing the change to cells Problems in designing implementing and operating cells Improving and adapting existing cells Structured frameworks and checklists to help analysis and decision making Numerous examples of cells in various industries

Making Manufacturing Cells Work Joseph A. Smolar,Society of Manufacturing Engineers,1989 Handbook of Cellular Manufacturing Systems Shahrukh A. Irani,1999-04-15 Cellular manufacturing CM is the grouping of similar products for manufacture in discrete multi machine cells It has been proven to yield faster production cycles lower in process inventory levels and enhanced product quality Pioneered on a large scale by Russian British and German manufacturers interest in CM methods has grown steadily over the past decade However there continues to be a dearth of practical guides for industrial engineers and production managers interested in implementing CM techniques in their plants Bringing together contributions by an international team of CM experts the Handbook of Cellular Manufacturing Systems bridges this
