Routledge International Handbook of Visual Research Methods in Anthropology Rupert Cox,Chris Wright,2025-03-31 Routledge International Handbook of Visual Research Methods in Anthropology approaches the question of method through conceptualisations of the visual world as light sight images and technologies of imaging that can be analysed and described through a range of visual practices in the course of anthropological research The aim of the book is to move beyond making a case for the importance of the visual via its notional arrangement as a subject and means of study in anthropology by showing how it is applied as a way of doing anthropological research through the explication of a series of examples Employing an innovative structure for a handbook

each contribution is orientated around a single distinguishing concept and together the contributions addresses the following three issues How to see through images by treating the visual as a form of knowledge made visible A second group of entries is concerned with how to see through time by approaching the visual as a modality for representing duration and rendering legible what may no longer be available to vision Finally a third group of entries deals with the visual at a phenomenal level as a medium that we see in This handbook is a timely and useful resource for both students and researchers of anthropology at this time because the discipline s long standing theoretical and empirically rich practical engagements with visual methods provide valuable insights for the social sciences into current transmutations of the visual into the multimodal the non representational and the sensory The importance of these areas as well as of digital research more generally makes visual methods ever more important for social scientists hence this handbook is also valuable for those studying general research methods courses and in related fields such as sociology health studies and social work
