## **Making Health Certain:**

Making Health Policy Andy Alaszewski, Patrick Brown, 2013-12-23 This new textbook opens up the policy making process for students uncovering how government decisions around health are really made Starting from more traditional insights into how ministers and civil servants develop policy with limited knowledge and money the book goes on to challenge the conception of policy as a rational process revealing it to be something quite different Knee jerk reactions to disasters keeping voters satisfied the powerful leverage of interest groups and the skewing of debate through ideology and the media are each considered in turn These processes render policy far from rational or at least require a much broader approach for considering policy logic one that is open to different rationalities of values norms and pragmatism The book draws on historical and contemporary examples to highlight that though challenges to policy makers may seem in some ways novel in many senses key processes endure and indeed are rooted in historical contexts Although the examples are drawn from UK health and social care the book's theory driven approach is applicable across national contexts especially for countries where uncertainty risk and resource pressures create significant dilemmas for policy makers The book's multi perspective thematic approach will be especially relevant to students as will the broad range of case study examples used Making Health Policy will be essential reading for students of health policy social policy social work and the sociology of medicine health and illness

**Global Health Impact** Nicole Hassoun, 2020. Every year nine million people are diagnosed with tuberculosis; every day over 13,400 people are infected with AIDS, and every thirty seconds malaria kills a child. For most of the world, critical medications that treat these deadly diseases are scarce, costly, and growing obsolete as access to first-line drugs remains out of reach and resistance rates rise. Rather than focusing research and development on creating affordable medicines for these deadly global diseases, pharmaceutical companies instead invest in commercially lucrative products for more affluent customers. Nicole Hassoun argues that everyone has a human right to health and to access to essential medicines, and she proposes the Global Health Impact global health impact.org new system as a means to guarantee those rights. Her proposal directly addresses the pharmaceutical industry's role; it rates pharmaceutical companies based on their medicines' impact on improving global health, rewarding highly rated medicines with a Global Health Impact label. Global Health Impact has three parts. The first makes the case for a human right to health and specifically access to essential medicines. Hassoun defends the argument against recent criticism of these proposed rights. The second section develops the Global Health Impact proposal in detail. The final section explores the proposal's potential applications and effects, considering the empirical evidence that supports it and comparing it to similar ethical labels. Through a thoughtful and interdisciplinary approach to creating new labeling, investment, and licensing strategies, Global Health Impact demands an unwavering commitment to global justice and corporate responsibility.

Health and the Good Society Alan Cribb, 2005-10-13. The goals of healthcare and health policy and the health-related dilemmas facing policy makers, professionals, and citizens are extensively analysed and debated in a range of disciplines including public health, sociology, and applied philosophy. *Health and the Good Society* is the first full-length work that addresses these debates in a way that

cuts across these disciplinary boundaries Alan Cribb's core argument is that clinical ethics needs to be understood in the context of public health ethics This entails healthcare ethics embracing the social dimension of health in two overlapping senses first the various respects in which health experiences and outcomes are socially determined and second the ways in which health related goods are better understood as social rather than purely individual goods This broader approach to the Ethics of healthcare includes a concern with the social construction of both healthcare goods and the roles ideals and obligations of agents that is to say it focuses upon the value field of health related action and not only upon the ethics of action within this value field This groundbreaking book thus seeks to open up the agenda of healthcare ethics both methodologically and substantively it argues that population oriented perspectives are central to all healthcare ethics and that everybody has some share of responsibility for securing health related goods including the good of greater health equality One of its major conclusions is that the rather limited tradition of health education policy and practice needs a complete re think
