The Mathematical Heritage of Henri Poincare Felix E. Browder, 1983-12-31 On April 7 10 1980 the American Mathematical Society sponsored a Symposium on the Mathematical Heritage of Henri Poincaré held at Indiana University Bloomington Indiana This volume presents the written versions of all but three of the invited talks presented at this Symposium those by W Browder A Jaffe and J Mather were not written up for publication In addition it contains two papers by invited speakers who were not able to attend S S Chern and L Nirenberg If one traces the influence of Poincaré through the major mathematical figures of the early and midtwentieth century it is through American mathematicians as well as French that this influence flows through G D Birkhoff Solomon Lefschetz and Marston Morse This continuing tradition represents one of the major strands of American as well as world mathematics and it is as a testimony to this tradition as an opening to the future creativity of mathematics that this volume is dedicated This part contains sections on topological methods in nonlinear problems mechanics and dynamical systems ergodic theory and recurrence and historical material

The Mathematical heritage of Henri Poincare Symposium on the Mathematical Heritage of Henri Poincare, 1983 **The Mathematical Heritage of Henri Poincaré** Felix E. Browder, 1983 On April 7 10 1980 the American Mathematical Society sponsored a Symposium on the Mathematical Heritage of Henri Poincaré held at Indiana University Bloomington Indiana This title presents the written versions this Symposium It contains two papers by invited speakers who were not able to attend S S Chern and L Nirenberg **The Mathematical Heritage of Henri Poincaré: Geometry** Felix E. Browder, 1983 (1983). - (... ; 39,2). Felix E. Browder, The Mathematical Heritage of Henri Poincaré: Topological methods in nonlinear problems Felix E. Browder, 1983 **Mathematical Heritage of Henri Poincaré** American Mathematical Society, 1982 **The mathematical heritage of Henri Poincare, Part 1** Felix E. Browder, **Poincaré, Philosopher of Science** María de Paz, Robert DiSalle, 2014-04-11 This volume presents a selection of papers from the Poincaré Project of the Center for the

Philosophy of Science University of Lisbon bringing together an international group of scholars with new assessments of Henri Poincaré's philosophy of science both its historical impact on the foundations of science and mathematics and its relevance to contemporary philosophical inquiry The work of Poincaré 1854-1912 extends over many fields within mathematics and mathematical physics But his scientific work was inseparable from his groundbreaking philosophical reflections and the scientific ferment in which he participated was inseparable from the philosophical controversies in which he played a pre eminent part The subsequent history of the mathematical sciences was profoundly influenced by Poincaré's philosophical analyses of the relations between and among mathematics logic and physics and more generally the relations between formal structures and the world of experience The papers in this collection illuminate Poincaré's place within his own historical context as well as the implications of his work for ours

Proceedings of Symposia in Pure Mathematics, 1983 *Henri Poincaré* Ferdinand Verhulst, 2012-08-11 The book describes the life of Henri Poincaré his work style and in detail most of his unique achievements in mathematics and physics Apart from biographical details attention is given to Poincaré's contributions to automorphic functions differential equations and dynamical systems celestial mechanics mathematical physics in particular the theory of the electron and relativity topology analysis situs A chapter on philosophy explains Poincaré's conventionalism in mathematics and his view of conventionalism in physics the latter has a very different character In the foundations of mathematics his position is between intuitionism and axiomatics One of the purposes of the book is to show how Poincaré reached his fundamentally new results in many different fields how he thought and how one should read him One of the new aspects is the description of two large fields of his attention dynamical systems as presented in his book on new methods for celestial mechanics and his theoretical physics papers At the same time it will be made clear how analysis and geometry are intertwined in Poincaré's thinking and work In dynamical systems this becomes clear in his description of invariant manifolds his association of differential equation flow with mappings and his fixed points theory There is no comparable book on Poincaré presenting such a relatively complete vision of his life and achievements There exist some older biographies in the French language but they pay only restricted attention to his actual work The reader can obtain from this book many insights in the working of a very original mind while at the same time learning about fundamental results for modern science

works have had a great impact all over the world Poincar acquired in his lifetime such a reputation that both nationally and internationally his life and career were made the object of various articles in the daily papers not only in France but also in the USA Some of his philosophical concepts have even caused sharp controversies in the Press as we will discover in this book This work presents an original portrait of Henri Poincar based on various press cuttings from The New York Times The San Francisco Sunday Call The Times The Sun The Washington Post that chronicled unknown anecdotes of his life for example his first name was actually not Henri but Henry he obtained his high school diploma in sciences with a zero in mathematics etc Such an approach enables the discovering of many forgotten or unknown aspects of his scientific and philosophical works as well as his important role in the public sphere Reader's Guide to the History of Science Arne Hessenbruch,2013-12-16 The Reader s Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn **History of Topology** I.M. James,1999-08-24 Topology for many years has been one of the most exciting and influential fields of research in modern mathematics Although its origins may be traced back several hundred years it was Poincar who gave topology wings in a classic series of articles published around the turn of the century While the earlier history sometimes called the prehistory is also considered this volume is mainly concerned with the more recent history of topology from Poincar onwards As will be seen from the list of contents the articles cover a wide range of topics Some are more technical than others but the reader without a great deal of technical knowledge should still find most of the articles accessible Some are written by professional historians of mathematics others by historically minded mathematicians who tend to have a different viewpoint

The Geometry of Complex Domains Robert E. Greene,Kang-Tae Kim,Steven G. Krantz,2011-05-18 This work examines a rich tapestry of themes and concepts and provides a comprehensive treatment of an important area of mathematics while simultaneously covering a broader area of the geometry of domains in complex space At once authoritative and accessible this text touches upon many important parts of modern mathematics complex geometry equivalent embeddings Bergman and Kahler geometry curvatures differential invariants boundary asymptotics of geometries group actions and moduli spaces The Geometry of Complex Domains can serve as a coming of age book for a graduate student who has completed at least one semester or more of complex analysis and will be most welcomed by analysts and geometers engaged in current research
