Stone, 1970 **Aspects of Economic and Social Modelling** Richard Stone, 1981 **A History of Economic Thought** Lionel Robbins, 2000-10-16 Lionel Robbins's now famous lectures on the history of economic thought comprise one of the greatest accounts since World War II of the evolution of economic ideas This volume represents the first time those lectures have been published Lord Robbins 1898 1984 was a remarkably accomplished thinker writer and public figure He made important contributions to economic theory methodology and policy analysis directed the economic section of Winston Churchill's War Cabinet and served as chairman of the Financial Times As a historian of economic ideas he ranks with Joseph Schumpeter and Jacob Viner as one of the foremost scholars of the century These lectures delivered at the London School of Economics between 1979 and 1981 and tape recorded by Robbins's grandson display his mastery of the intellectual history of economics his infectious enthusiasm for the subject and his eloquence and incisive wit They cover a broad chronological range beginning with Plato Aristotle and Aquinas focusing extensively on Adam Smith Thomas Malthus and the classicals and finishing with a discussion of moderns and marginalists from Marx to Alfred Marshall Robbins takes a varied and inclusive approach to intellectual history As he says in his first lecture I shall go my own sweet way sometimes talk about doctrine sometimes talk about persons sometimes talk about periods The lectures are united by Robbins's conviction that it is impossible to understand adequately contemporary institutions and social sciences without understanding the ideas behind their development Authoritative yet accessible combining the immediacy of the spoken word with Robbins's exceptional talent for clear well organized exposition this volume will be welcomed by anyone interested in the intellectual origins of the modern world [Urban Systems \(Routledge Revivals\)](#) C S Bertuglia, G. Leonardi, S. Occelli, G. A. Rabino, R. Tadei, Alan Wilson, 2013-10-18 This edited collection first published in 1987 provides a comparative analysis of different approaches to urban modelling and lays the foundations for the possibility of integration and a more unified field The first part contextualises the development of the field of urban systems modelling focusing on the variety of approaches and possible implications of this on the future of research and methodology Next the editors consider economic and non economic approaches followed by an analysis of spatial interaction based approaches Providing an overview to the field and research literature the overarching argument is that there should be an integrated methodological approach to urban system modelling [The Future of Economics](#) Alexander J. Field, 2020-03-10 Originally published under the title *The Future of Economic History* this book attempts to chart a new course for the intellectual discipline known as economic history and

determine its contributions to the study of economics The authors suggest new and potentially fruitful areas and approaches for research and at the same time analyze the weaknesses in past efforts to chart a course for the future

Economics as Anatomy G.M. Peter Swann,2019 For most of his career Peter Swann s main research interest has been the economics of innovation But he has also been preoccupied with a second question what is the best way to study empirical economics In this book he uses his knowledge of the first question to answer the second There are two fundamentally different approaches to innovation incremental innovation and radical innovation radical in the sense that we go back to the roots of empirical economics and take a different tack An essential lesson from the economics of innovation is that we need both incremental and radical innovation for the maximum beneficial effect on the economy Swann argues that the same is true for economics as a discipline This book is a much awaited sequel to Putting Econometrics in its Place which explored what other methods should be used and why This book is about the best way of organising the economics discipline to ensure that it pursues this wide variety of methods to maximum effect

A Recent History of Recognized Economic Thought: Contributions of the Nobel Laureates to Economic Science Lee H. Dymond,2015-05-20 Since 1969 75 people have been awarded the Nobel Prize in Economics Recent Recognized A History of Economic Thought Contributions of the Nobel Laureates to Economic Science describes their major accomplishments in a manner so all readers regardless of their knowledge of economics can appreciate the efforts of these scholars and their impact on the development and progress of economic science Begin with a brief tour of economic thought and the factors that have influenced economic doctrine from the 16th through the 20th century Then for each Nobel Laureate learn about their background and professional affiliations Complete your understanding of each Laureate s accomplishments with a concise relatively non technical summary of their Nobel Prize Lecture

The Future of Economic History Alexander J. Field,2012-12-06 This collection represents a modest attempt to chart a new course for the intellectual discipline known as economic history The book is not about productivity growth in the 1990s lest the title give rise to any confusion As a group these essays suggest new and potentially fruitful areas or approaches for research and at the same time address weaknesses in past efforts One important audience will be graduate students attempting to decide whether to write a dissertation in economic history or trying to select or refine dissertation topics in the area and determine how to approach them Some of the essays will most certainly be appropriate additions to the or semester courses in economic history that remain a fixture in quarter graduate economics training programs A second audience should be established scholars who are now or have in the

past done research in economic history and are interested in the perspectives of a relatively younger group of scholars The term younger is used here advisedly to describe a group of scholars born between 1943 and 1954 Nevertheless the authors of these essays can on at least one dimension be distinguished from the pathbreaking new economic historians who established their academic reputations in the early 1960s Indeed the contributors to this volume include students of such pioneers as Richard Easterlin Albert Fishlow William Parker and Jeffrey Williamson

Putting Econometrics in Its Place G. M. P. Swann, 2006-01-01 I consider the book as well suited to provide a broader perspective on methods used in applied economic research For the applied researcher the book will provide a nice overview on existing methods and some arguments as to which method might be particularly suitable for specific purposes Peter Winker Jahrbuch für Nationalökonomie und Statistik

The Flow of Funds in Theory and Practice J. Cohen, 2012-12-06 The central emphasis in the book is on the transaction and the constraints that its architecture imposes on a discussion of monetary theory and policy Because of their comprehensiveness and discipline the flow of funds accounts are the ideal vehicle for theorizing about real and financial interaction Such interaction can best be understood when real and financial transactions are expressed in a common flow dimension Each decision by economic agents is seen as two ended in terms of markets one market supplies the source of funds and the second market absorbs these funds A matrix of interdependent markets is featured throughout the theoretical discussion Credit markets and the bank credit market in particular become the source of disturbance in the theoretical model but the necessary involvement of the money market is also stressed Theories of financial instability and crisis now receiving considerable attention are part of the more general theory of the flow of funds The rationale for the monetary authority to target credit rather than the monetary aggregates emerges from the analytical discussion A flow constrained analysis clarifies interest rate determination provides a helpful format for discussing equilibrium and disequilibrium integrates credit markets with the familiar IS LM framework and identifies a class of missing equations in macro monetary theory The prototype of the missing equations is an equation explaining monetary dissaving in terms of a series of arguments only one of which will be the stock of real balances or real wealth

Applied Decision Analysis and Economic Behaviour Andrew J. Hughes Hallett, 2012-12-06 The optimisation of economic systems over time and in an uncertain environment is central to the study of economic behaviour The behaviour of rational decision makers whether they are market agents firms or governments and their agencies is governed by decisions designed to secure the best outcomes subject to the perceived information and economic responses including those of other agents Economic behaviour has therefore to be analysed in terms of the outcomes of a multiperiod stochastic optimisation process containing four main components the economic responses the dynamic constraints represented by an economic model the objective function the goals and their priorities the conditioning information expected exogenous events and the expected future state of the economy and risk management how uncertainties are accommodated

The papers presented in this book all analyse some aspect of economic behaviour related to the objectives information or risk components of the decision process While the construction of economic models obviously also has a vital role to play that component has received much greater or almost exclusive attention elsewhere These papers examine optimising behaviour in a wide range of economic problems both theoretical and applied They reflect a variety of concerns economic responses under rational expectations the Lucas critique and optimal fiscal or monetary policies market management partly endogenous goals evaluating government reactions locational decisions uncertainty and information structures and forecasting with endogenous reactions
