Mathematical Results in Quantum Mechanics Jaroslav Dittrich, Pavel Exner, Milos Tater, 2012-12-06 At the age of almost three quarters of a century quantum mechanics is by all accounts a mature theory There were times when it seemed that it had borne its best fruit already and would give way to investigation of deeper levels of matter Today this sounds like rash thinking Modern experimental techniques have led to discoveries of numerous new quantum effects in solid state optics and elsewhere Quantum mechanics is thus gradually becoming a basis for many branches of applied physics in this way entering our everyday life While the dynamic laws of quantum mechanics are well known a proper theoretical understanding requires methods which would allow us to derive the abundance of observed quantum effects from the first principles In many cases the rich structure hidden in the Schrödinger equation can be revealed only using sophisticated tools This constitutes a motivation to investigate rigorous methods which yield mathematically well founded properties of quantum systems

Mathematical Results in Quantum Mechanics Pavel Exner, Benoit Grébert, 2002 This work contains contributions presented at the conference QMath 8 Mathematical Results in Quantum Mechanics held at Universidad Nacional Autónoma de México in December 2001 The articles cover a wide range of mathematical problems and focus on various aspects of quantum mechanics quantum field theory and nuclear physics Topics vary from spectral properties of the Schrödinger equation of various quantum systems to

the analysis of quantum computation algorithms The book should be suitable for graduate students and research mathematicians interested in the mathematical aspects of quantum mechanics Mathematical Results in Quantum Mechanics M. Demuth,P. Exner,H. Neidhardt,V. Zagrebnov,2012-12-06 The last decades have demonstrated that quantum mechanics is an inexhaustible source of inspiration for contemporary mathematical physics Of course it seems to be hardly surprising if one casts a glance toward the history of the subject recall the pioneering works of von Neumann Weyl Kato and their followers which pushed forward some of the classical mathematical disciplines functional analysis differential equations group theory etc On the other hand the evident powerful feedback changed the face of the naive quantum physics It created a contemporary quantum mechanics the mathematical problems of which now constitute the backbone of mathematical physics The mathematical and physical aspects of these problems cannot be separated even if one may not share the opinion of Hilbert who rigorously denied differences between pure and applied mathematics and the fruitful oscillation between the two creates a powerful stimulus for development of mathematical physics The International Conference on Mathematical Results in Quantum Mechanics held in Blossin near Berlin May 17 21 1993 was the fifth in the series of meetings started in Dubna in the former USSR in 1987 which were dedicated to mathematical problems of quantum mechanics A primary motivation of any meeting is certainly to facilitate an exchange of ideas but there also other goals The first meeting and those that followed Dubna 1988 Dubna 1989 Liblice in the Czech Republic 1990 were aimed in particular at paving ways to East West contacts **Mathematical Results in Quantum Physics** ,2011 Annotation The volume collects papers from talks given at QMath11 Mathematical Results in Quantum Physics which was held in Hradec Krlov September 2010 These papers bring new and interesting results in quantum mechanics and information quantum field theory random systems quantum chaos as well as in the physics of social systems Part of the contribution is dedicated to Ari Laptev on the occasion of his 60th birthday in recognition of his mathematical results and his service to the community The QMath conference series has played an important role in mathematical physics for more than two decades typically attracting many of the best results achieved in the last three year period and the meeting in Hradec Krlov was no exception Book jacket Mathematical Results in Quantum Physics Pavel Exner,2011 The volume collects papers from talks given at QMath11 Mathematical Results in Quantum Physics which was held in Hradec Kralove September 2010 These papers bring new and interesting results in quantum mechanics and information quantum field theory random systems quantum chaos as well as in the physics of social systems Part of the contribution is dedicated to Ari Laptev on the occasion of his 60th birthday in recognition of his mathematical results and his service to the community The QMath conference series has played an important role in mathematical physics for more than two decades typically attracting many of the best results achieved in the last three year period and the meeting in Hradec Kralove was no exception Mathematical Results in Quantum Mechanics M. Condensed Matter Physics and Exactly Soluble Models Elliott H. Lieb, 2013-06-29 This is the third Selecta of publications of Elliott Lieb the first two being *Stability of Matter From Atoms to Stars* edited by Walter Thirring and *Inequalities* edited by Michael Loss and Mary Beth Ruskai A companion fourth Selecta on Statistical Mechanics is also edited by us Elliott Lieb has been a pioneer of the discipline of mathematical physics as it is nowadays understood and continues to lead several of its most active directions today For the first part of this selecta we have made a selection of Lieb's works on Condensed Matter Physics The impact of Lieb's work in mathematical condensed matter physics is unrivaled It is fair to say that if one were to name a founding father of the field Elliott Lieb would be the only candidate to claim this singular position While in related fields such as Statistical Mechanics and Atomic Physics many key problems are readily formulated in unambiguous mathematical form this is less so in Condensed Matter Physics where some say that rigor is probably impossible and certainly unnecessary By carefully selecting the most important questions and formulating them as well defined mathematical problems and then solving a good number of them Lieb has demonstrated the quoted opinion to be erroneous on both counts What is true however is that many of these problems turn out to be very hard It is not unusual that they take a decade even several decades to solve
