Mathematical Connections is about some of the topics that form the foundations for high school mathematics It focuses on a closely knit collection of ideas that are at the intersection of algebra arithmetic combinatorics geometry and calculus Most of the ideas are classical methods for fitting polynomial functions to data for summing powers of integers for visualizing the iterates of a function defined on the complex plane or for obtaining identities among entries in Pascal s triangle Some of these ideas previously considered quite advanced have become tractable because of advances in computational technology Others are just beautiful classical mathematics topics that have fallen out of fashion and that deserve to be resurrected While the book will appeal to many audiences one of the primary audiences is high school teachers both practicing and prospective It can be used as a text for undergraduate or professional courses and the design lends itself to self study Of course good mathematics for teaching is also good for many other uses so readers of all persuasions can enjoy exploring some of the beautiful ideas presented in the pages of this book **Mathematics for Business Decisions: Calculus and optimization** Richard B. Thompson,2003 Students are allowed to learn mathematics in a setting that mirrors the professional environment they will encounter after college **MODERN MATHEMATICS FOR BUSINESS DECISION- MAKING** Donald R.
