101 Things Everyone Should Know about Math Marc Zev, 2010 *Mathematics: All That Matters* Mike Askew, 2015-02-26 Mathematics often gets a bad press Describing someone as calculating or rational is hardly as flattering as being labelled artistic or creative and mathematicians in movies or novels are often portrayed as social misfits who rarely get the guy or girl No wonder some folks say oh I don't care for mathematics I was never any good at it with a wistful sense of pride Yet professional mathematicians talk of the subject differently They look for elegant solutions to problems revel in playing around with mathematical ideas and talk of the creative nature of mathematics As the Russian mathematician Sophia Kovalevskaya said It is impossible to be a mathematician without being a poet in soul So why is there such a gap between the views of everyday folks and professional mathematicians Part of the problem lies in how most of us were taught mathematics in school The mathematics served up there is presented as a series of decontextualised abstract ideas wrested from the human struggles and interactions that gave birth to the ideas Through looking at some of the history of mathematics psychological studies into how we come to know mathematics and key ideas in mathematics itself the intent of this book is if not to make the reader fall in love with mathematics then at least to come to understand its nature a little better and perhaps care a little more for it In short this book explores the human side of maths

Gene Keith J. Devlin, 2001 Where does our mathematical ability come from Our prehistoric ancestors brains were essentially the same as ours so they must have had the same underlying ability What purpose could it serve in 50 000 BC And what exactly goes on in our brains when we multiply 15 by 36 or prove Fermat s Last Theorem The answer according to Keith Devlin is closely related to the evolutionary changes in the human brain that gave rise to language It lies within our genes and more specifically with the pattern making abilities with which we are born Devlin uses these insights to show why some people loathe mathematics why others find it so difficult and why a select few excel at the subject He also suggests ways in which we can improve our mathematical skills **Visions in Mathematics** Noga Alon, Jean Bourgain, Alain Connes, Misha Gromov, Vitali D.
