Mathematics for Older Children Edith Ethel Biggs, 1972 Mathematics for Older Children Edith Biggs, 1972 Practical Mathematics for Children with an Autism Spectrum Disorder and Other Developmental Delays Jo Adkins, Sue Larkey, 2013 This book provides practical strategies for teaching key mathematics concepts to children with autism spectrum disorders and other developmental delays The authors explain how to incorporate a child's special interest into learning in order to help them engage fully with new concepts and how to incorporate mathematics into daily living skills Teaching: Mathematics in the Early Years and Primary Classroom Mary Briggs, 2007-10-31 Creative Teaching is not only for the arts this unique and stimulating book shows how mathematics and mathematics teaching can be creative exciting and enjoyable Offering teachers a dynamic and different perspective on mathematics it enables them to see and teach in creative ways that will develop their pupil s mathematical thinking potential **Investigating Mathematics with Young Children** Rosemary Althouse, 1994 Om matematikundervisning for 3 5 rige b rn Children's Mathematics Elizabeth Carruthers, Maulfry Worthington, 2006-08-30 In Case Study 5 a grassroots Children's Mathematics Network group the initiative supported the participants in their professional change by giving them a space for the detailed and joint consideration of children's mathematical thinking Another significant feature of this initiative is its focus on careful consideration and analysis of children's mathematics and the ways in which professionals can support and encourage the children's mathematical thinking and reasoning The standard of the mathematical understanding thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age Researching Effective CPD in Mathematics Education RECME project NCETM 2009 The review also plays great score by play based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism Section 115 features children's mathematical graphics and emphasises. The role of mark making in children's cognitive development is set out in the taxonomy Carruthers and Worthington 2006 The report recommends that local authorities leaders managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes The Williams Maths Review DCSF 2008 At the very heart of the success of the book is the authors ability to see mathematics through young children's eyes by listening to and reflecting on the constant efforts made by children to make sense of their world This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable process Branwen Llewelyn Jones Early Years Consultant at PACE Ltd TACTYC Ground breaking To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout If you want to expand your understanding upwards and outwards then get a copy soon Times Educational Supplement I first read Children's Mathematics Making Marks Making Meaning a couple of years

ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers I m sure you will find it compelling reading too I think it has the potential to change in a fundamental way how we think about early mathematical development Lynne McClure Editor Math Co ordiator's File Mathematics Association In their exceptionally readable and informative book Children's Mathematics Making Marks Making Meaning Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible Liz Pumphrey NRICH This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school The authors explain the development and range of young children's mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory and practice this acclaimed book demonstrates how children s own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC s 2003 Jenefer Joseph Award for the Creative Arts 3 8 awarded for their innovative work with children on mathematical graphics Handbook of International Research in Mathematics Education Lyn D. Learning and Teaching Mathematics 0-8 Helen Taylor, Andrew Harris, 2013-11-14 What a super book It is absolutely packed with practical ideas and activities to help you love maths and love teaching and or learning it It certainly helps to develop an enthusiasm for a subject most adults tend to say I m no good at Early Years Educator A wonderful book packed with practical ideas and activities to help all students love maths Jo Boaler Professor of Mathematics Education Stanford

University Fostering an enthusiasm for mathematics in young children is a vital part of supporting their mathematical development Underpinned by subject and pedagogical knowledge case studies and research based perspectives the authors provide clear guidance on how to support young children's learning and understanding in an effective and engaging way Contemporary approaches to developing essential mathematical learning for young children are explored including play practical activities and talk for mathematics outdoor learning understanding pattern counting calculation and place value measures and shape problem solving and representing mathematics assessment working with parents Written for both trainees and practitioners working with children aged 0 to 8 years including those studying for Early Years and Early Childhood degrees and those on Primary PGCE and Primary Education courses this book offers mathematical subject knowledge and teaching ideas in one volume Helen Taylor is Course Leader of PGCE Primary Part time Mathematics at Canterbury Christ Church University Andrew Harris is Course Leader of PGCE Modular Mathematics at Canterbury Christ Church University **Primary Mathematics: Teaching Theory and Practice** Claire Mooney, Mary Briggs, Alice Hansen, Judith McCullouch, Mike Fletcher, 2014-06-10 The essential teaching theory and practice text for primary mathematics Covering the skills of planning monitoring and assessment and class management it relates these specifically to primary mathematics With full coverage of the theory and practice required for effective and creative mathematics teaching this text is an essential guide for all trainees working towards QTS Throughout practical guidance and features support trainees to translate this learning to the classroom embed ICT in their lessons and to understand the wider context of their teaching This 7th edition has been updated in line with the new National Curriculum Understanding Children's Mathematical Graphics: Beginnings in Play Elizabeth Carruthers, Maulfry Worthington, 2011-04-16 This book challenges traditional beliefs and practices of teaching written mathematics in early childhood It gives theoretical underpinnings and offers exciting insights and context to children's early mathematical thinking and in particular into children's mathematical graphics showing how this supports their understanding of the abstract symbolic language of mathematics Drawing on a wide range of examples it illustrates and explains how children explore and communicate their mathematical thinking through their mathematical graphics and how this begins in play The book looks at the power of children's own marks symbols and other graphical representations to convey meanings exploring how they support complex thinking The authors explore the relationship between children's play and meaning making Rather than viewing mathematics as a separate subject or as a set of basic skills to be transmitted they demonstrate that in supportive learning cultures children develop their own mathematical thinking to solve problems Key features include Numerous new examples and case studies of children from birth to 8 years highlighting the complexity and richness of children's thinking Explanation of pedagogical issues showing how they can support rich play and mathematics Draws on the authors latest research This book is valuable reading for students teachers primary mathematics coordinators and all early years professionals working in the Early Years Foundation

Explores the role of cognition in treating math based learning difficulties The Development of Mathematical Skills Chris Donlan, 2022-02-16 Current research into the psychology of children's mathematics is extremely diverse. The present volume reflects this diversity it is unique in its breadth bringing together accounts of cutting edge research from widely differing sometimes opposing viewpoints The reader with a grounding in developmental psychology but no knowledge of mathematical development will enjoy a wide ranging and challenging summary of current trends Those already familiar with some of the work may take the opportunity to broaden their knowledge and to evaluate new methodologies and the insights they offer The book is an invitation to explore a complex set of phenomena for which no unitary explanation can be offered It aims to show that apparently disparate research perspectives may be complementary to each other and to suggest that progress towards a comprehensive account of mathematical skills may require a broad based understanding of research from more than one viewpoint The Routledge International Handbook of Dyscalculia and Mathematical Learning **Difficulties** Steve Chinn, 2014-11-20 Mathematics plays an important part in every person s life so why isn t everyone good at it The Routledge International Handbook of Dyscalculia and Mathematical Learning Difficulties brings together commissioned pieces by a range of hand picked influential international authors from a variety of disciplines all of whom share a high public profile More than fifty experts write about mathematics learning difficulties and disabilities from a range of perspectives and answer questions such as What are mathematics learning difficulties and disabilities What are the key skills and concepts for learning mathematics How will IT help now and in the future What is the role of language and vocabulary How should we teach mathematics By posing notoriously difficult questions such as these and studying the answers The Routledge International Handbook of Dyscalculia and Mathematical Learning Difficulties is the authoritative volume and is essential reading for academics in the field of mathematics It is an incredibly important contribution to the study of dyscalculia and mathematical difficulties in children and young adults **Engaging Families as Children's First** Mathematics Educators Sivanes Phillipson, Ann Gervasoni, Peter Sullivan, 2016-11-21 This book explores how professionals can engage and inspire parents to support their young children's mathematics learning Bringing together international experts researchers and scholars it proposes a framework for engaging with and supporting parents including those who are less aware of the crucial development of children's mathematical skills in the early years Focusing on mathematics learning from birth to 5 years the book s underlying assumption is that it is possible to offer guidance to professionals working with families with young children concerning how to engage and support families in the area of mathematics learning including those families who seem alienated from education services Specifically the respective chapters present a framework for understanding children's early mathematical development and the important role of families in this regard They describe effective strategies for engaging families in their children's mathematics learning including those who are marginalised and experience multiple disadvantages so that all families can best support their children's mathematical learning and their

development of positive attitudes towards learning In closing hurdles and opportunities within the systems surrounding family engagement are addressed **Tips for the Mathematics Teacher** Alfred S. Posamentier, Hope J. Hartman, Constanze Kaiser, 1998-06-23 Here is an organized easy to use reference that provides the latest research results and practical tips for K 12 math teachers Each of the chapters presents a collection of tips on different aspects of mathematics teaching in a user friendly manner For each tip the authors give you The teaching tip A discussion of the research project that led to the tip Practical applications for using the tip Ways to avoid common difficulties associated with each tip Resources for details on process and findings Foster questioning and independent thinking challenge students with stimulating problems Get higher levels of achievement You ll find ideas for improving students poor mathematics self concepts and for building students confidence in their skills and abilities Every Day of the School Year Math Problems Marcia Miller, Martin Lee, 1999-03 Using themes of historic events holidays famous birthdays humorous happenings and more these instant math problems are a fun filled way to build essential math problem solving skills How to Recognise and Support Mathematical Mastery in Young Children's Play Di Chilvers, 2021-07-12 This book explains how young children develop mathematically in their earliest years and shows the support and teaching needed by adults to accelerate their progress and attainment helping them master mathematical concepts and skills The practical guidance has been carefully developed over a number of years and is based on research undertaken with primary schools in Sheffield as part of the Talk for Maths Mastery initiative It recognises that children's mathematical development is embedded within child led play and connected to deeper levels of thinking and wider dispositions for learning Maths is happening everywhere at any moment we just need to keep an open mind open eyes and listen Including case studies links to practice and reflective questions the chapters reveal what mastery orientation looks like from the children's perspective in their learning and covers children's serve and return conversational talk mathematical babies and their developmental momentum schematic patterns of thinking mathematical mark making child led play problem solving creative and critical thinking how adults can support children s mathematical talk thinking and mastery This book will help all early years practitioners and teachers working with children throughout the EYFS and KS1 build their understanding knowledge experience and confidence of engaging in early mathematics
