are often posed in terms of the types of mathematics that are worthwhile and valuable for both the student and society in general and about how to best support students so that they can develop this mathematics Concerns about equity are about who is excluded from the opportunity to develop quality mathematics within our current practices and systems and about how to remove social barriers that systematically disadvantage those students This collection of chapters summarises our learning about the achievement of both equity and quality agendas in mathematics education and to move forward the debate on their importance for the field

Posing and Solving Mathematical Problems Patricio Felmer, Erkki Pehkonen, Jeremy Kilpatrick, 2016-04-29 This book collects recent research on posing and solving mathematical problems Rather than treating these two crucial aspects of school mathematics as separate areas of study the authors approach them as a unit where both areas are measured on equal grounds in relation to each other The contributors are from a vast variety of countries and with a wide range of experience it includes the work from many of the leading researchers in the area and an important number of young researchers The book is divided in three parts one directed to new research perspectives and the other two directed to teachers and students respectively
