**Mathematics of Program Construction** Roland Backhouse, Jose Nuno Oliveira, 2006-12-30 This volume contains the proceedings of MPC 2000, the fifth international conference on Mathematics of Program Construction. This series of conferences aims to promote the development of mathematical principles and techniques that are demonstrably useful and usable in the process of constructing computer programs, whether implemented in hardware or software. The focus is on techniques that combine precision with concision, enabling programs to be constructed by formal calculation. Within this theme, the scope of the series is very diverse, including programming methodology, program specification and transformation, programming paradigms, programming calculi, and programming language semantics. The quality of the papers submitted to the conference was in general very high. However, the number of submissions has decreased compared to the previous conferences in the series. Each paper was refereed by at least five and often more committee members. In order to maintain the high standards of the conference, the committee took a stringent view on quality; this has meant that in some cases a paper was rejected even though there was a basis for a good conference or journal paper, but the submitted paper did not meet the committee's required standards. In a few cases, a good paper was rejected on the grounds that it did not fit within the scope of the conference.

**Mathematics of Program Construction** Dexter Kozen, Carron Shankland, 2004-09-21 This volume contains the proceedings of MPC 2004, the Seventh International Conference on the Mathematics of Program Construction. This series of conferences aims to promote the development of mathematical principles and techniques that are demonstrably useful in the process of constructing computer programs, whether implemented in hardware or software. The focus is on techniques that combine precision with conciseness, enabling programs to be constructed by formal calculation. Within this theme, the scope of the series is very diverse, including programming methodology, program specification and transformation, programming paradigms, programming calculi, and programming language semantics. The quality of the papers submitted to the conference was in general very high, and the number of submissions was comparable to that for the previous conference. Each paper was refereed by at least four and often more committee members. This volume contains 19 papers.

selected for presentation by the program committee from 37 submissions as well as the abstract of one invited talk titled Static Checking for Java by Greg Nelson Imaging Systems Department HP Labs Palo Alto California The conference took place in Stirling Scotland The previous six conferences were held in 1989 in Twente The Netherlands in 1992 in Oxford UK in 1995 in Kloster Irsee Germany in 1998 in Marstrand near Göteborg Sweden in 2000 in Ponte de Lima Portugal and in 2002 in Dagstuhl Germany The proceedings of these conferences were published as LNCS 375 669 947 1422 1837 and 2386 respectively
