Mathematics Performance in Primary Schools Great Britain: Parliament: House of Commons: Committee of Public Accounts, 2009 In 2007 08 the National Strategy to improve performance in primary mathematics cost some 104 million to implement The Strategy aims to raise performance through extensive teaching and learning resources supported by professional development programmes for teachers In 2006 07 some 2 3 billion was spent on teaching mathematics in primary schools out of a total expenditure of 10 billion on primary teaching and teaching support staff Yet improvements in the mathematics results of primary school pupils have levelled off since 2000 In 2008 79 per cent of pupils met the Government s expected standard at Key Stage 2 age 11 This means that over one in five children are starting secondary school without a secure foundation in mathematics There are persistent gaps in the mathematics performance of primary school pupils from different backgrounds and with different characteristics In contrast to other subjects boys are making more progress than girls The biggest attainment gap 18 percentage points is related to deprivation Performance varies across England and between local authorities with the percentage of pupils achieving the expected standard at KS2 ranging from 70 to 87 per cent The Primary

National Strategy has contributed to improvements in primary mathematics teaching and learning but weaknesses persist in vital areas such as the use and application of mathematics to real life situations and the assessment of pupils progress The lack of depth in subject knowledge of many primary school teachers and the lack of take up of continuing professional development in mathematics are major concerns which the Department has only recently begun to address through a ten year programme to train 13 000 specialist teachers

Understanding Mathematics in the Lower Primary Years Derek Haylock, Anne D Cockburn, 1997-04-28 This is a substantially revised and expanded edition of the authors earlier book *Understanding Early Years Mathematics* It is written for teachers and student teachers working with children 4 8 It aims to provide them with a clearer understanding of the mathematical material they deal with in the classroom This revised edition includes new chapters on number patterns and calculations data handling and the characteristic ways of thinking mathematically that are at the heart of using and applying mathematics Each chapter includes a section of activities for use with children annotated suggestions for further reading and a summary of key ideas

Assessment in Geographical Education: An International Perspective Theresa Bourke, Reece Mills, Rod Lane, 2022-02-27 In recent years there has been increased attention paid to the importance of assessment in Geographical Education the chosen subject for this book Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students teachers parents and policymakers To be effective assessment needs to be valid reliable and fair Validity is about ensuring that we assess what we claim we are assessing Reliability is about measuring performance and understanding in a consistent way Without validity and reliability assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning While there is a substantial literature on evidence based assessment in secondary school contexts research exploring best practice assessment in geography is rare This is a concern given the distinctive nature of geography and the important role of assessment in the learning process This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography The chapters are written by leading researchers in Geographical Education from across the globe These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia USA South Korea Germany Switzerland and Singapore What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography providing scholarly examples of evidence based practices for assessing student s knowledge and skills

Educating Tomorrow's Engineers Great Britain: Parliament: House of Commons: Science and Technology Committee, 2013-02-08 In the UK we teach young people to become computer users and consumers rather than programmers and software engineers This is creating a chronic skills gap in ICT We need around 82 000 engineers and technicians just to deal with retirements up to 2016 and 830 000 SET professionals by 2020 On the plus side the Government's proposal to include computer science as a fourth science option to count towards the EBac is welcomed The Committee also welcomes the EBac's focus on attainment of mathematics and science GCSEs but is concerned that subjects such as Design and Technology D T might be marginalised A Technical Baccalaureate TechBac is being designed but if it is to be a success schools should be incentivised to focus on the TechBac by making it equivalent to the EBac Reforms to vocational education following the Wolf Review meant that Level 2 of the Engineering Diploma a qualification highly regarded would count as equivalent to one GCSE despite requiring curriculum time and effort equivalent to several GCSEs The Engineering Diploma however is currently being redesigned as four separate qualifications The Committee also expressed concerns over the Department for Education's DfE lack of clarity on its research budget and use of evidence in decision making The DfE needs to place greater focus on gathering evidence before changes to qualifications are made and must leave sufficient time for evidence to be gathered on the effectiveness of policies before introducing further change The possibility of gathering evidence from randomised controlled trials RCTs should be seriously considered
