often very restricted time windows As a consequence FASD models though depending on the multifaceted interference of alcohol with several molecular pathways can provide valuable information about which specific developmental periods and brain areas are critically involved in the genesis of mental retardation Putting together data obtained through several experimental paradigms of alcohol exposure and those deriving from other genetic and non genetic models one can figure out to what extent different types of mental retardation share common pathogenetic mechanisms The present Research Topic is aimed at establishing the state of the art of the current research on experimental FASD focusing on differences and homologies with other types of intellectual disability The ultimate goal is to find out a common roadmap in view of future therapeutical approaches
