**Free Will** Nicholas Rescher, 2017-07-05 This volume is a reassessment of free will and as such seeks to answer the question Do humans ever act under the guidance of the will To determine if humans have free will Rescher first examines what exactly free will is and how it should function While the literature on the subject of free will is vast a good deal still remains to be done to avert obscurity and confusion Rescher leads the reader through a conceptual web of distinctions that taken together provide a satisfying contribution to philosophical thought on free will in general Rescher sharpens his highly conceptual assessment by

making distinctions between productive or metaphysical and moral or motivational freedom free decision and free action motivational and causal determination of choices durational events and the instantaneous eventuations that mark their commencements and completions and between pre determination and precedence determination In doing so he also examines the role of nature nurture and free choice Each of these distinctions defines the characteristics of free will and averts a group of problems and difficulties traditionally ascribed to the doctrine With these in place it becomes possible to validate the compatibility between freedom of the will and a certain special mode of determinism Rescher s conceptual perspective in this age old debate opens up the prospect of naturalizing free volition through its natural emergence via the same process of evoking development that has seen the emergence of intelligence on the world s stage That is only after the conceptual issues are settled can the question of how things actually stand be answered This work will be an important reassessment of free will not just because of the author s final conclusion but because of the issue illuminating path he takes to get there

language maintained through the marvel of the brain's biochemistry and sustained through the mirage of the psychological juggernauts of the brain. The magic, the marvel, and the mirage together bring about subtle shifts as the linguistic brain suppresses many psychological details, habitually applies mental templates such as inversions and dichotomies, and enhances its language by coining religious and spiritual metaphors. The consequence of these changes is that the usual flickering self begins to be impressed by itself, believing it is buttressed by something transcendental and eternal within the soul or the spirit. The self, although indoctrinated during its formative years, also begins to assimilate and accept the opinion that the overwhelming weight of religious doctrines and dogmas, the overburden, signifies as the legitimate proof for the eternal soul.
