New Developments In Differential Geometry:

New Developments in Differential Geometry, Budapest 1996 J. Szenthe, 2012-12-06 Proceedings of the Conference on Differential Geometry Budapest Hungary July 27 30 1996 **New Developments in Differential Geometry** L. Tamassy, J. Szenthe, 2014-01-15 *Recent Advances in Differential Geometry and Related Areas* Bogdan D. Suceavă, Adara M. Blaga, Marian Ioan Munteanu, Cezar Oniciuc, Shoo Seto, Gabriel-Eduard Vălcu, Lihan Wang, 2025-06-24 This volume contains the proceedings of the AMS Special Session on Recent Advances in Differential Geometry held virtually on April 1 2 2023 and the Tenth Congress of Romanian Mathematicians Special Session on Recent Advances in the Geometry of Submanifolds held on June 30 July 5 2023 in Pitești Romania In the last two decades various techniques produced new results in differential geometry and many of them focused on the geometry of submanifolds where one of the most important questions the Willmore conjecture was solved in 2012 by A Neves and F Coda Marques This invites a reflection on the new trends and research directions that contemporary differential geometry might and will take in its natural development Some of the most important advances have been obtained by using techniques in geometric analysis while others have been using more classical methods which are still of interest Motivated by these new developments the present volume intends to bring together various viewpoints on the recent study of representing the fundamental idea of space in differential geometry Of particular interest are the results focused on minimal submanifolds and their generalizations and the related concept of harmonic mappings and their generalizations In preparing this volume the editors were particularly interested in the study of curvature functionals in various contexts from comparison geometry to new curvature invariants relations between curvature and topology as well as other related topics *Lectures on Differential Geometry* Shiing-Shen Chern, Weihuan Chen, Kai Shue Lam, 1999 This book is a translation of an authoritative introductory text based on a lecture series delivered by the renowned differential geometer Professor S S Chern in Beijing University in 1980 The original Chinese text authored by Professor Chern and Professor Wei Huan Chen was a unique contribution to the mathematics literature combining simplicity and economy of approach with depth of contents The present translation is aimed at a wide audience including but not limited to advanced undergraduate and graduate students in mathematics as well as physicists interested in the diverse applications of differential geometry to physics In addition to a thorough treatment of the fundamentals of manifold theory exterior algebra the exterior calculus connections on fiber bundles Riemannian geometry Lie groups and moving frames and complex manifolds with a succinct introduction to the theory of Chern classes and an appendix on the relationship between differential geometry and theoretical physics this book includes a new chapter on Finsler geometry and a new appendix on the history and recent developments of differential geometry the latter prepared specially for this edition by Professor Chern to bring the text into perspectives **Global Differential Geometry** Christian Bär, Joachim Lohkamp, Matthias Schwarz, 2011-12-18 This volume contains a collection of well written surveys provided by experts in Global Differential

Geometry to give an overview over recent developments in Riemannian Geometry Geometric Analysis and Symplectic Geometry The papers are written for graduate students and researchers with a general interest in geometry who want to get acquainted with the current trends in these central fields of modern mathematics

Seminar on Differential Geometry
Shing-Tung Yau, 2016-03-02 This collection of papers constitutes a wide ranging survey of recent developments in differential geometry and its interactions with other fields especially partial differential equations and mathematical physics This area of mathematics was the subject of a special program at the Institute for Advanced Study in Princeton during the academic year 1979-1980 the papers in this volume were contributed by the speakers in the sequence of seminars organized by Shing Tung Yau for this program Both survey articles and articles presenting new results are included The articles on differential geometry and partial differential equations include a general survey article by the editor on the relationship of the two fields and more specialized articles on topics including harmonic mappings isoperimetric and Poincaré inequalities metrics with specified curvature properties the Monge-Ampère equation L^2 harmonic forms and cohomology manifolds of positive curvature isometric embedding and Kähler manifolds and metrics The articles on differential geometry and mathematical physics cover such topics as renormalization instantons gauge fields and the Yang-Mills equation nonlinear evolution equations incompleteness of space-times black holes and quantum gravity A feature of special interest is the inclusion of a list of more than one hundred unsolved research problems compiled by the editor with comments and bibliographical information

Trends In Differential Geometry, Complex Analysis And Mathematical Physics - Proceedings Of 9th International Workshop On Complex Structures, Integrability And Vector Fields
Stanko Dimiev, Vladimir S Gerdjikov, Kouei Sekigawa, 2009-08-21 This book contains the contributions by the participants in the nine of a series of workshops Throughout the series of workshops the contributors are consistently aiming at higher achievements of studies of the current topics in complex analysis differential geometry and mathematical physics and further in any intermediate areas with expectation of discovery of new research directions Concerning the present one it is worthwhile to mention that in addition to the new developments of the traditional trends many attractive and pioneering works were presented and their results were contributed to the present volume The contents of this volume therefore will provide not only significant and useful information for researchers in complex analysis differential geometry and mathematical physics including their related areas but also interesting mathematics for non specialists and a broad audience The present volume contains new developments and trends in the studies on constructions of holomorphic Cliffordian functions the swelling constructions of minimal surfaces with higher genus in flat tori the spectral properties of soliton equations on symmetric spaces new types of shallow water waves described by Camassa-Holm type equations the properties of pseudo hermitian boson and fermion coherent states fractals and chaos on orthorhombic lattices and even an ambitious proposal of a graph model for Kähler manifolds with Kähler magnetic fields

Advances In Differential Geometry And Topology Franco

Tricerri,1990-11-20 The aim of this volume is to offer a set of high quality contributions on recent advances in Differential Geometry and Topology with some emphasis on their application in physics A broad range of themes is covered including convex sets Kaehler manifolds and moment map combinatorial Morse theory and 3 manifolds knot theory and statistical mechanics Contemporary Perspectives In Differential Geometry And Its Related Fields - Proceedings Of The 5th International Colloquium On Differential Geometry And Its Related Fields Toshiaki Adachi,Hideya Hashimoto,Milen J

Hristov,2017-09-25 This volume contains original papers and announcements of recent results presented by the main participants of the 5th International Colloquium on Differential Geometry and its Related Fields ICDG2016 These articles are devoted to some new developments on geometric structures on manifolds Besides covering a broad overview on geometric structures this volume provides significant information for researchers not only in the field of differential geometry but also in mathematical physics Since each article is accompanied with detailed explanations it serves as a good guide for young scientists working in this area **Recent Developments in Pseudo-Riemannian Geometry** Dmitrii Vladimirovich

Alekseevskii,2008 This book provides an introduction to and survey of recent developments in pseudo Riemannian geometry including applications in mathematical physics by leading experts in the field Topics covered are Classification of pseudo Riemannian symmetric spaces Holonomy groups of Lorentzian and pseudo Riemannian manifolds Hypersymplectic manifolds Anti self dual conformal structures in neutral signature and integrable systems Neutral Kahler surfaces and geometric optics Geometry and dynamics of the Einstein universe Essential conformal structures and conformal transformations in pseudo Riemannian geometry The causal hierarchy of spacetimes Geodesics in pseudo Riemannian manifolds Lorentzian symmetric spaces in supergravity Generalized geometries in supergravity Einstein metrics with Killing leaves The book is addressed to advanced students as well as to researchers in differential geometry global analysis general relativity and string theory It shows essential differences between the geometry on manifolds with positive definite metrics and on those with indefinite metrics and highlights the interesting new geometric phenomena which naturally arise in the indefinite metric case The reader finds a description of the present state of the art in the field as well as open problems which can stimulate further research
